MarginOS Spec Amendment v16.3: Clear sample data and Start fresh

For: Design & Development Agent (handover) and Akthar Uddin
Amends: MarginOS Product Spec v16 (`/workspace/spec.md`, new section 15.E, the section 14 log, and cross-references in 10.2 criterion 8, 12.4 and 12.6). Builds on v16.1 and v16.2.
Date: 29 October 2026
Status: Approved by Akthar Uddin on 29 October 2026 (feature addition). K7 (E9) is also decided: sample data is cleared automatically on the first successful own upload.

What changes elsewhere in the spec

Section	Change
Title and status	Version is now "v16, with amendments v16.1, v16.2 and v16.3"
10.2 criterion 8 (account deletion)	Unchanged; adds a pointer: Start fresh and Clear sample data follow 15.E
12.4 (Free tier rules)	New line: resets never restore Free uploads
12.6 (Data and privacy)	Adds "Start fresh" (delete all data, keep the account and Pro); same 30-day removal window, backups included
14 (Open questions log)	New entry Q6

15.E Amendment v16.3: Clear sample data and Start fresh (feature, approved 29 October 2026)

Akthar approved this on 29 October 2026, after testing the demo: the built-in sample orders were still loaded, so the costs he set to £0 were applied to them and the results looked wrong. v16.3 ***adds two features*** *(a feature-set change, approved). It changes no pricing or positioning. It works with, and does not replace, account deletion (10.2 criterion 8, 12.6), Free data rules (7, 12.4) and retention (12.6).*

E1. Sample data (clarifies the demo build; not defined before v16.3)

- Built-in sample orders (and any sample costs that come with them) are always **labelled "Sample data"** wherever results are shown, and every sample row is marked as sample so it can be removed without touching the user's own data.
- Loading or clearing sample data is **not an upload**: it never uses or gives back a Free upload (12.4).

E2. "Clear sample data"

- **What it does:** removes the built-in sample orders and sample costs, and returns the user to an **empty starting state with the upload prompt** (the same state as a new account).
- **What it never touches:** the user's own uploads, templates, manual entries, ad spend, overheads and settings.
- **Confirmation:** before anything is removed, the user is asked **"Are you sure?"**, and the message names what will be removed (for example "This removes the sample orders and sample costs. Your own data is not affected."). The user must confirm; **Cancel** changes nothing.
- Only available while sample data is loaded.

E3. "Start fresh" (in settings)

- **What is deleted:** all of the user's

    - uploaded order files and order datasets (Free: the one dataset; Pro: all rows in the shop and **all saved datasets**, 12.7),
    - MarginOS templates and cost data: unit cost, packaging cost, shipping cost and return costs (per order and per-SKU),
    - ad spend (all channels and attributed revenue),
    - overheads,
    - calculator and scenario inputs (break-even ROAS/ACOS, break-even price, target-margin price, Pro scenarios),
    - any sample data still loaded.
- **What is kept:** the account and sign-in (email, password, Google link), email verification, the **Pro licence** and its purchase records, billing and purchase history, and account settings (home currency, time zone, tax settings, target margin, own currency rates, conversion fee %). Stripe's and Link's own records are never affected (12.6).
- **Confirmation pop-up ("Are you sure?"):**
    - lists **exactly what will be deleted**, using the user's own counts where possible (for example "2 order datasets, 1 template, ad spend for 3 channels, 4 overheads, your calculator inputs"),
    - says what is kept ("Your account, sign-in, Pro licence and purchase history are kept"),
    - says clearly **"This can't be undone"**,
    - has **Cancel as the default (safe) choice**: Cancel is pre-selected, and closing the pop-up or pressing Escape counts as Cancel. Only a deliberate click on the delete button goes ahead.
- If an import is in progress, Start fresh waits until it has finished or failed.
- After Start fresh the user is on the empty starting state with the upload prompt.

E4. Upload counter (Free) and abuse

- Neither action **restores Free daily uploads**. The "uploads left today" counter (12.4) stays exactly as it was and resets only at the user's midnight, as now. Changing the time zone still follows the once-every-30-days rule (12.4).

E5. Separate from account deletion

- "Start fresh" deletes data, not the account. **Permanently deleting the account** stays a separate setting and works exactly as already specified (10.2 criterion 8; 12.6). The wording of both must make the difference clear, so a user wanting one never does the other by mistake.

E6. How deleted data is removed (follows 12.6 and 10.2 criterion 8)

- Deleted data disappears from the app, results, exports and PDF reports **straight away**.
- It is permanently removed from live storage and from **backups within 30 days**, the same window as account deletion (10.2 criterion 8). It is not kept for recovery, so there is no "undo".
- Retention timers no longer have anything to act on: the Free 30-day inactivity deletion (12.4) and the Pro 24-month rule (12.6) start again only when new data is uploaded. A refunded or charged-back Pro user's 30-day export copy (12.6, 10.3 criterion 12) is deleted too, because Start fresh asks for everything to go.
- Customer personal data is still never stored (section 6), so no new personal data is created by either action.

E7. Logging

- Each confirmed action logs **one event** without personal data: the event type ("sample data cleared" or "start fresh"), the date and time, the internal account ID, the plan (Free/Pro) and the **number** of items deleted by type. No email, name, file names, product names, SKUs or amounts. Cancelled confirmations log nothing. (The internal account ID is pseudonymous; the event is kept under the account-data rules in 12.6 and deleted with the account.)

E8. Acceptance criteria (v16.3)

1. **Start fresh:** after confirming, the dashboard shows **no products, no revenue, no true profit and no Health Score**, and shows the upload prompt. Templates, ad spend, overheads, calculator inputs and (Pro) saved datasets are all

gone.

2. **Cancel changes nothing:** pressing Cancel, closing the pop-up or pressing Escape leaves every dataset, cost, ad spend, overhead and calculator input exactly as before, and logs no event.
3. **Pro stays:** a Pro user who runs Start fresh still has Pro, the same licence and purchase records, and can upload again straight away without limits.
4. **Upload counter unchanged:** a Free user with "1 of 3 uploads left today" who runs Start fresh (or Clear sample data) still sees "1 of 3 uploads left today".
5. **Clear sample data (manual):** before any own upload, with only sample data loaded, Clear sample data (after "Are you sure?") removes it and the user lands on the empty state with the upload prompt.
6. **Confirmation content:** both pop-ups ask "Are you sure?" and name what will be removed; Start fresh lists every data type to be deleted, says it can't be undone and has Cancel pre-selected.
7. **Account kept:** after Start fresh the user is still signed in, can sign in again with the same email, password or Google, and their home currency and tax settings are unchanged.
8. **Event logged:** each confirmed action writes one event with the fields in E7 and none of the excluded data.
9. **Account deletion still separate:** Start fresh never deletes the account, and account deletion still behaves as in 10.2 criterion 8.
10. **Automatic clearing on first own upload (K7):** after the user's first successful own upload, no sample rows or sample costs remain, the "Sample data" label is gone, and results come only from the user's data. A failed or cancelled upload leaves the sample data in place, still labelled, and uses no Free upload.

E9. Sample data is cleared on the first own upload (K7: decided, approved by Akthar 29 October 2026)

- When the user's **first own upload succeeds** (a successful import of an order file, a multi-file platform set or a MarginOS template), all sample rows and sample costs are **removed automatically** in the same step, and a note says: "Sample data has been removed now that your own data is in."
- A **failed or cancelled** upload (including a file where every row is invalid, section 6) does **not** clear the sample data; it stays in place, labelled "Sample data".
- No confirmation is asked for this automatic clearing, because it removes only sample data. It never uses an extra Free upload: the user's upload counts once as normal (12.4).
- Sample data is therefore never merged into the Pro shop or held as the Free dataset alongside the user's own data. Manual entry is not an upload, so costs typed in while sample data is loaded apply to the labelled sample results until the user uploads or uses "Clear sample data".
- The automatic clearing logs the E7 event as "sample data cleared (automatic)".

Open questions log entry (spec section 14)

ID	Date raised	Section	Question	Raised by	Answer	Answered by	Amendment
Q6	29 Oct 2026	6, 7, 10.2, 12.4, 12.6, 12.7	Demo testing: costs set to £0 were applied to the loaded sample orders. Can users clear sample data, or reset everything?	Akthar (demo testing)	**v16.3: approved by Akthar.** "Clear sample data" and "Start fresh", each with an "Are you sure?" confirmation; uploads not restored; account deletion unchanged (15.E). **K7 decided (v16.3, approved by Akthar):** sample data is cleared automatically when the first own upload succeeds; a failed or cancelled upload leaves it in place (E9)	Business & Product Agent; Akthar (approved)	v16.3
