MarginOS · QA & Deployment Agent → Design & Development

QA Handoff — Spec v16 / Amendment v16.4

Generated 30 October 2026 · Europe/London · Build tested: main @ 9ea4fb7

Needs fixes first | Production readiness 4/10 | Demo UI slice 7.5/10 | Do not deploy without approval

MarginOS QA Handoff — Design & Development

From: QA & Deployment Agent
To: Design Agent + Development Agent
Date: 30 October 2026 (Europe/London)
Build tested: `main` @ `9ea4fb7` (local `http://localhost:3847`)
Spec baseline: MarginOS Product Spec v16 (Final) + Spec Amendment v16.4 (Free 24-hour data deletion, raw-file deletion, upgrade-within-24h, K8–K11)

---

1. Purpose of this document

Pass clear, actionable findings so Design and Development can fix launch blockers **without re-litigating approved product rules**.

- Do **not** change pricing, Free/Pro matrix, or v16.4 retention rules unless Product re-opens them.
- Do **not** deploy to production until QA re-tests and the product owner explicitly approves.
- Prefer minimal, spec-aligned fixes over redesign.

QA verdict: Needs fixes first — **not ready for production deploy**.
Scores: Production readiness **4/10** · Demo UI slice **7.5/10**.

---

2. What already passes (do not regress)

Area	Spec	Status
Free 24h clocks + notices (orders path)	v16.4 F1 / F2	Pass
Raw uploaded file not stored after import	v16.4 F5	Pass (browser never persists file bytes)
3 successful uploads / day; failed import does not burn	K9 / §12.4	Pass
Free gating: top 10 products, top 3 leaks (no £ impact), 1 headline	§7–8	Pass
Upgrade within 24h keeps data + cancels clocks	F7 / F8.8	Pass (demo unlock)
Sample clear / Start fresh / K7 auto-clear on first own upload	v16.3	Pass

Area	Spec	Status
Pricing copy £39 early-bird / £59 lifetime; Sold through Link	§12.5	Pass
No Lemon Squeezy leftovers	—	Pass
K8 Settings UI: kept Pro data export-only + Restore with Pro	K8	Pass (demo “Switch to Free” path)
Responsive mobile (~390) / tablet (~768)	—	Pass — no layout blockers found
Unit tests + production build	—	Pass (`npm test` , `npm run build`)

---

3. Ownership legend

Owner	Meaning
Dev	Engineering / product logic / integrations
Design	Copy hierarchy, notice prominence, modal/flow UX, visual clarity
Both	Needs Design + Dev together
Product / Akthar	External blockers (Stripe account, Google Cloud, legal)

---

4. Must-fix before launch (ordered)

B1 — Stripe Managed Payments not wired (Critical) — Dev + Product (K4)

Spec	§12.10, checklist `docs/checklists/stripe-smp.md` , K4
Free/Pro	Free → Pro checkout
Steps	Open Upgrade → Unlock Pro
Expected	Stripe Checkout Session (`managed_payments` / Sold through Link), tax-inclusive prices, webhook-driven licence state
Actual	`src/lib/payments/provider.ts` → `mockStartCheckout` grants Pro instantly; no Stripe adapter, keys, or webhooks
Dev ask	Implement Stripe adapter behind existing provider interface; wire Checkout + webhook matrix; keep mock for local demo behind a flag
Blocked by	Akthar **K4** (Stripe account, SMP eligibility, Dashboard)

B2 — Auth is demo-only (Critical) — Dev + Product (K5/K6)

Spec	§12.6, A5 / `docs/checklists/auth-rules.md`, K5, K6
Free/Pro	All
Steps	Sign in → Resend verification; Continue with Google
Expected	Real email/password + SES London verification; Google disabled or real OIDC after K6; uploads/checkout locked until verified
Actual	`src/lib/auth/provider.ts` demo provider; Resend verifies instantly; Google succeeds as demo
Dev ask	Replace demo provider with approved in-app auth + SES; disable Google until K6 credentials exist
Design ask	Keep verify-before-upload banner; ensure Google disabled state is clear (not “broken”)
Blocked by	K5 stack already decided; **K6** Google Cloud project still Akthar

B3 — No production retention / refund / delayed-pay pipeline (Critical) — Dev

Spec	v16.4 F1, F6, F8.1, F8.14, K8, K11
Free/Pro	Free + refunded Pro
Steps	Expire Free clocks; refund/chargeback Pro; pending then **failed** delayed payment
Expected	Server-side clocks; data inaccessible at exactly 24h; live purge ≤1h; K8 from Stripe events (export-only, not in results); payment fail deletes any Free data whose clock would already have ended
Actual	Client `localStorage` + 30s tick only; K8 via header **Switch to Free**; `paymentPending` / `setPaymentPending` exist with **no UI** and **no fail→delete** path
Dev ask	Backend retention jobs + webhook handlers; implement K11 fail path; replace demo Switch to Free with licence-driven state (keep Switch to Free only as a test harness if needed, behind demo flag)
Design ask	Spec pending-payment UI (paused countdown copy already exists in banner when `pausedAt` set); design payment-failed / data-deleted messaging

B4 — ECB FX conversion missing (High) — Dev

Spec	§6 currency conversion
Free/Pro	Free + Pro
Steps	Import orders in non-home currency; try unsupported currency
Expected	Convert at ECB rate on order date; unsupported currency excluded with named message
Actual	`userFxRates: {}`; no ECB table/API; parsers largely stamp home currency without conversion maths
Dev ask	Implement ECB FX (or get Product sign-off to defer with explicit in-app limitation copy)

Design ask	If deferred: clear empty-state / warning copy when FX unavailable

B5 — Template CSV success omits exact Free deletion datetime (High) — Dev (+ Design check)

Spec	v16.4 F2, F8.5
Free/Pro	Free
Device	Desktop Chromium
Steps	Verified Free user → upload MarginOS Template CSV
Expected	Import summary includes exact deletion date/time in user TZ (parity with orders import)
Actual	Free `template` clock starts; `ProductWorkspace` success message only reports cost/ad row counts — no "Free data deleted …" datetime. Countdown banner still appears.
Dev ask	Mirror orders path messaging from `AppContext.importPlatformOrders` (uses `formatDeletionTime`) into template success `csvMsg`
Design ask	Confirm single pattern for post-import deletion time (orders + template + manual) so notices feel consistent

---

5. Should-fix before launch (Medium / Low)

B6 — Platform "0 uploads left" missing midnight reset time (Medium) — Dev

Spec	§10.1.10 / K9
Steps	Burn 3 Free uploads → try another **platform** import
Expected	Message includes reset time (midnight in user TZ)
Actual	Orders path: `0 uploads left today.` Template path already mentions midnight. Inconsistent.
Dev ask	Align `AppContext.importPlatformOrders` / `recordSuccessfulUpload` messaging with template copy

B7 — Shopify PII strip warnings never surface (Medium) — Dev (+ Design microcopy)

Spec	§10.2.1 / A1
Steps	Upload Shopify Orders CSV with Email / Name / Address columns
Expected	Columns ignored **and** user warned they were stripped
Actual	`shopify.ts` `STRIP_HEADER_HINTS` loop is empty — no warnings pushed (data still not stored — privacy OK, transparency gap)

Dev ask	Emit warning(s) when strip headers present
Design ask	Short, non-alarming strip notice copy

B8 — 24-month inactivity for kept Pro data (Medium) — Dev

Spec	v16.4 K8 / F9
Expected	Kept order data deleted after 24 months inactivity; emails 60/30 days before
Actual	Not implemented (localStorage keeps indefinitely)
Dev ask	Server job + SES templates once auth/email exist

B9 — Account deletion stub (Medium) — Dev + Design

Spec	§10.2.8 / 15.E
Expected	Email-confirmed account deletion
Actual	Settings copy: “not available in this demo build”
Dev / Design	Full flow when backend auth exists

B10 — Privacy line pending legal (Low) — Product / Legal (K10)

Spec	v16.4 K10
Note	Sales wording approved; privacy retention line pending legal. Do not invent final legal copy.

---

6. Design-only notes (no Critical layout bugs)

Responsive pass on **390×844** and **768×1024**: no overflow / clipped CTAs / broken modals found.

Optional polish (not launch blockers):

1. **Post-import “Original file deleted…”** appears in the import summary string — Design may want slightly stronger hierarchy without adding hero clutter (F2 / F5).
2. **Header actions:** User icon → Auth; Pro CTA → Upgrade. Ensure targets are distinct on mobile (icons only) so Auth is findable.
3. **K8 kept-data card** lives in Settings — confirm discoverability after refund/chargeback (scroll/anchor or post-refund banner pointing to Settings).
4. **Pending payment / last-hour** states already have banner tones — Design to sign off final copy for pause + fail→delete once Dev implements B3.

Do **not** redesign the first viewport into a dashboard, add card clutter to the hero, or change brand-first hierarchy unless Product requests it.

---

7. Explicit non-bugs / clarifications

Observation	Verdict
No Free retention banner on sample data	**Correct** (F1)
Upload counter still “n of 3” after Switch to Free	**Expected** — daily Free upload counter is independent of K8 kept data
“Switch to Free” in header	**Demo harness** for K8 — replace with Stripe-driven licence state for production
Raw file “deleted” in SPA	**Conceptually OK** for launch slice (never stored); production still needs F5 unfinished-import 1h cancel if multi-step upload staging is added

---

8. Key code map (for Development)

Concern	Primary files
Free clocks / pause / cancel	`src/lib/retention.ts`, `src/lib/retention.test.ts`, `src/context/AppContext.tsx`
Free notices UI	`src/components/FreeRetentionBanner.tsx`
Orders import + deletion datetime	`src/context/AppContext.tsx` → `importPlatformOrders`
Template import success copy (B5)	`src/components/ProductWorkspace.tsx` → `onTemplate`
Platform parsers / PII hints (B7)	`src/lib/csv/shopify.ts`, `parseUtils.ts`, `amazon.ts`, `etsy.ts`
Payments mock (B1)	`src/lib/payments/provider.ts`, `UpgradeModal.tsx`
Auth mock (B2)	`src/lib/auth/provider.ts`, `AuthModal.tsx`
K8 keep / export / restore	`AppContext.switchToFree` / `unlockProDemo`, `SettingsBar.tsx`
Pricing constants	`src/lib/pricing.ts`, `payments/provider.ts` FIXED_PRICES
Stripe / auth checklists	`docs/checklists/stripe-smp.md`, `docs/checklists/auth-rules.md`
Locked decisions	`docs/DECISIONS-v16.4.md`, `docs/OPEN-QUESTIONS.md`

---

9. Suggested delivery slices

Slice	Owner	Scope	Re-test focus
A — Spec UI parity	Dev (+ Design review)	B5, B6, B7	Free template + orders notices; upload-limit copy; PII warning
B — Auth real	Dev	B2	Verify gate, SES email, Google disabled until K6
C — Stripe SMP	Dev + Akthar K4	B1	Test-mode matrix in stripe-smp checklist
D — Retention backend	Dev	B3, B8	F8 acceptance criteria; K11 fail; K8 webhook; 24-month job
E — FX	Dev (+ Product)	B4	Multi-currency import / unsupported currency message
F — Account deletion	Dev + Design	B9	After B/C

QA will re-run Spec v16 + v16.4 acceptance after each merged slice. **No production deploy without explicit owner approval.**

---

10. Deployment posture (for awareness — do not ship yet)

Item	Status
Vite static build	Works (`npm run build` → `dist/`)
Vercel as **demo** preview	Technically possible — **requires separate written plan + explicit approval**
Production	**Blocked** — missing Stripe/SES/auth secrets, backend, K4 Dashboard, legal K10
Env vars in repo	None — production needs Stripe keys, webhook secret, SES, auth secrets, Google OAuth

---

11. Ask back to Product (if blocking Design/Dev)

1. Confirm whether ECB FX (B4) is **launch-required** or may ship with limitation copy.
2. Confirm K4 / K6 timelines (blocks B1 / Google).
3. Confirm whether demo **Switch to Free** remains as a QA harness after Stripe K8 is live.
4. Legal sign-off on K10 privacy retention wording.

---

12. Handoff checklist for receiving agents

- [ ] Read Spec v16 Final + Amendment v16.4 (esp. F1–F8, K8–K11)
- [ ] Read this document end-to-end

- [ ] Do not change approved pricing or Free/Pro matrix
- [ ] Prefer Slice A first if a fast UI/spec parity PR is needed
- [ ] Tag QA for re-test on each slice
- [ ] Do not deploy production without owner + QA approval

End of handoff.
