Margins 365 Product Specification v19 — FINAL

Business & Product handoff to the Design & Development team. Approved by Akthar Uddin, 6 November 2026 at 00:44 Europe/Madrid, with K52 (reverse trial) approved at 01:05, K53 (TikTok public copy) approved at 12:49, K54 (homepage, sample report and pricing test updates) approved at 12:54, K55 (hero revert, Product headline, Sample report CTAs, Pro Command centre badge and FAQ expansion) approved at 13:40, K56 (homepage differentiation line) approved at 14:20, K57 (password reset; Google sign-in enabled) approved at 16:10, and K58 (Margins 365 rename) approved at 17:59 Europe/Madrid. FINAL v19; superseded rules and open defaults are identified explicitly.

> **Version (6 November 2026, 18:12 Europe/Madrid):** This specification is **version 19**. An earlier instruction at 18:05 asked for "version 17"; that was not the intended version and is not operative. This is the current full approved content previously issued as FINAL v18.1 (including K41–K58 and the Margins 365 rename). It does not restore historical v17 or v17.1 product content.

This is the approved, self-contained replacement for v18 FINAL, now labeled version 19. It is the current full content previously issued as FINAL v18.1 and folds the 6 November 2026 decisions K41–K58 into the existing structure. Sections 12.0–12.3 retain the approved calculation, Health Score and leak logic unchanged. Section 22 remains in force except its dark-mode items. Where this specification and v18 FINAL disagree, this specification applies. It does not restore historical v17 or v17.1 content.

> **NAME (K58, supersedes K37 and the OD3 name/target-domain decision):** The user-facing business and product name is **Margins 365** (exactly that spelling and spacing; not "Margins365", "MarginOS" or "MarginSeam"). The secured target public domain is **margins365.com**. Every user-facing product name reads from one `PRODUCT_NAME` config value, default **Margins 365**. This is a document decision, not a DNS, deployment or repository rename. Until a verified cutover, live public hosting remains **marginos.online** and transactional email continues to use the existing SES identities. Trademark clearance is not implied, and **margins365.com** is not treated as already configured. Do not invent support or privacy email addresses. Current logo and colours stay; do not design a new logo. Historical filenames (for example `MarginOS-Tiers-and-UX-Brief.md`) and repository identifiers (including CSS tokens such as `--mo-*` and live code paths) are unchanged.
>
> **Carried forward from v18:** a 14-day free trial on every tier, with a card collected up front and an automatic charge on day 15 unless cancelled (K38, replacing K35); all product data wiped when subscription access ends, with advance deletion warning/export and backup removal within 7 days (K39). SES stays in Stockholm `eu-north-1`; app/database/backups stay in DigitalOcean London (K36). Sample report and sample shop stay. K51 changes what happens to the account after the owner cancels: cancellation also closes the account, and the login does not remain after access end.

> **Approved v19 (content previously issued as FINAL v18.1), 6 Nov 2026 at 00:44 Europe/Madrid (K41–K51), plus K52 at 01:05, K53 at 12:49, K54 at 12:54, K55 at 13:40, K56 at 14:20, K57 at 16:10 and K58 at 17:59:** remove Support target and published support SLAs (K41); remove the founding offer (K42); trial banner “14 days free. Cancel before day 14 and pay nothing. From £39/mo” (approved 00:34) plus the other Option 1 trial strings, with no email cancel (K43, K50); homepage “What files do I need?” and “How to use this platform” (K44); stronger phone and tablet/iPad acceptance (K45); one primary CTA, “Start 14-day free trial” (K46); Shops and Seats explanations (K47); layout and scaling rules (K48); homepage Product section copy (K49); in-platform owner-only cancellation (K50); no retention offer at launch; access continues until the trial or paid-period end, then data is wiped; cancelling in-platform also closes the account, with no email-closure workflow and a GDPR contact address in the privacy policy only (K51, superseding K29’s email closure). Reverse trial (K52): Starter, Growth and Pro trials run on full Pro features and Pro’s 5,000-order limit; Scale trials run on Scale; day 15 charges the chosen plan’s price; extras beyond the chosen plan lock on conversion rather than delete. Public TikTok copy (K53): until the XLSX reader passes its tests, say “TikTok Shop UK (Beta): Excel import coming soon” — no export instructions and no upload option that implies it works. Homepage, sample-report and pricing test updates (K54): centre the Product section and Get Started block; (i) icons in place of “?”; Most Popular moves to Pro; expanded comparison and new FAQ answers. K55 withdraws the K54 hero equal-spacing rule (it looked worse); changes the Product headline to “See where your profit is leaking.”; replaces the Sample report opening-section trial button with Open Sample Shop (two Open Sample Shop buttons, header trial CTA stays); restores the Pro tile badge “Command centre” above Most Popular; removes the live “Email support” comparison row and any (i) on Shops/Seats; and adds seats, shops and further support-reducing FAQ answers. Password reset (K57): Google sign-in is enabled; email and password sign-in stays; Forgot password? recovers an account through SES without enumerating accounts. Rename (K58): the user-facing name is Margins 365; the target domain is margins365.com; live marginos.online and current SES identities remain until the documented cutover; trademark clearance is not implied. Post-launch candidates are listed in 9.2 and are not v19 scope.
>
> **Build status:** Approved v19 requirements are build-ready now. Items below are explicitly undecided; implement only their labelled recommended defaults behind config (K40). Those leftover defaults include one trial per payment card, the 3-day reminder timing, OD7 (refund after a trial), and the other open table entries. Legal/accounting review, Stripe/Google setup and real platform exports remain launch checks. Design decides how screens look; this document fixes what the product must do.

Open decisions

Not yet decided — build with the recommended default behind config where possible

The approved product requirements are final. The entries below are **not approvals**. Recommended

defaults allow Design and Development to proceed without blocking; keep each behind configuration or a replaceable module. Legal/tax review and real-file validation remain launch checks, not reasons to hold up implementation.

IDs	Not yet decided	Recommended default for implementation — not an approval
OD3, Q29	New product name/domain and trademark clearance	**Resolved by K58** for the user-facing name and target domain: **Margins 365** and **margins365.com**, superseding the working name MarginOS and the candidate MarginSeam. `PRODUCT_NAME` default is **Margins 365**. Trademark clearance is not implied and remains a legal launch check. Live public hosting and SES identities remain **marginos.online** and the current SES configuration until the 20.5 cutover. Do not invent support or privacy email addresses, and do not treat the new domain as already configured.
OD4, Q29	Softer card-fee explanation	Use “may include international and premium cards” behind copy config; legal review may restore the v17.1 wording before publication.
OD5, Q22	Seat invitations, roles, ownership and downgrade	Implement one owner plus member seats up to the plan allowance. Owner controls billing and shops; members analyse but cannot manage billing. Invites are verified-email links; removed/downgraded excess seats become read-only until period end. Keep role rules configurable.
OD5, Q23	Scale shops and 15,000-order aggregation	Up to 3 shops per account; shop switcher and combined dashboard. Count 15,000 unique orders **account-wide**, not per shop; platform entitlements remain per shop. Keep aggregation scope configurable.
Q24	Upload/saved-dataset caps	Do not add another hard cap. Keep 10/3 Starter and 30/unlimited Growth as non-enforced telemetry defaults; Pro/Scale unlimited within fair use. The approved monthly order limits still apply.
OD6, Q30	Fixed USD/EUR/CAD/AUD prices	Launch checkout with approved GBP amounts only. Add local fixed amounts only after approval; do not reuse lifetime prices or invent currency conversions.
OD7	Legal/accounting review; refund after a trial	Build the approved flows and plain-English disclosures now. Legal must specifically decide whether the 14-day first-payment refund window still applies after trial conversion and confirm UK 2027, VAT, privacy and deletion wording before launch.
OD8	Passwordless email sign-in	Keep approved email + password and verification. Add code+link only if later approved; do not build both by default.
Q10	Maximum upload	Recommended 100 MB and 50,000 rows per file, validated before

	size/orders per upload	parsing; keep both configurable and separate from monthly order limits/fair use.
Q11	Template-only first upload	Only a successful upload containing a real order clears sample data. Template-only/manual cost changes leave samples intact.
Q25	TikTok support fixture retention/Beta exit	Delete consented debug fixtures after 30 days, configurable; exit Beta only after ordinary, refund, affiliate, adjustment and overlapping real files reconcile.
Q26	Annual founding discount	**Withdrawn** under K42. There is no founding offer, so there is no annual-founding question.
Q27	Downgrade/history and migration	Hide out-of-history rows rather than delete them; preserve usage through the active period and apply the new limit/history at renewal. Existing users require an approved migration before any destructive action.
Q28	Legacy lifetime feature equivalence	Preserve existing purchases and results; provide the closest equivalent Pro-level functionality, without Scale-only multi-shop/seat capacity, behind a legacy entitlement mapping. No forced recurring billing.
Q32	How public platform-count rows read while TikTok import is coming soon (K53)	**Recommended default, not a separate approval:** usable platforms are Shopify, Amazon and Etsy (3). Comparison table and plan cards: Starter **1 of 3**; Growth **Up to 2 of 3**; Pro and Scale **All 3**. Every plan also shows “TikTok Shop UK (Beta): Excel import coming soon”. Where a single catalogue phrase is needed, “3 platforms + TikTok coming soon” is allowed if per-plan slot limits stay clear. After the K53 restore gate, revert to 1 of 4 / up to 2 of 4 / All 4, with TikTok as a usable slot.
Q33	How “Suggest a feature” is collected (K54 FAQ)	**Recommended default, not a separate approval:** a signed-in in-app **Suggest a feature** form with one short text field (recommended maximum 1,000 characters, configurable). Submissions are stored (timestamp, internal account ID, plan, submitter, text) for Akthar to review in an admin view or export. No public email address is published and no reply is promised. Not a cancel or support-email route (K50).
Q34	Password-reset operational defaults (K57)	**Recommended defaults, not a separate approval:** reset link expires in 60 minutes; single use; a new request invalidates older unused links for that account; rate limit 3 requests per email and 10 per IP per 60 minutes; Google-only accounts get the same neutral on-screen message and an email that tells them to use Continue with Google (no set-password link).

1. Product vision

A modern web app that shows e-commerce sellers their true profit after product cost, packaging, shipping, ads, platform fees and returns, with a Margin Health Score (0–100) and specific, actionable recommendations. It launches internationally for sellers in the UK, EU, US, Canada and Australia, through paid monthly or annual subscriptions. There is no Free plan; every subscription tier includes a 14-day free trial (K38).

2. Positioning

“Find where your margin leaks and what each leak costs you. Plans from £39 a month, including VAT. Cancel any time.”

- Margins 365 diagnoses rather than only tracking: it ranks margin leaks by impact in the user's currency and tells the seller what to fix.
- Its differentiator is CSV diagnosis without a live store connection, clear “Show the maths” explanations, and ranked fixes ahead of dense reporting. TikTok Excel import is coming soon (K53).
- Every paid tier includes true profit, Health Score and confidence, product verdicts, all six launch leaks with monthly impact, target prices, calculators, sample data, privacy CSV export, email support and the same security protections. Public TikTok copy is “TikTok Shop UK (Beta): Excel import coming soon” until the K53 restore gate.
- Hard monthly order limits and no per-order surprise charges are explicit. At the limit, the customer upgrades to analyse more orders that billing month; existing results remain visible.
- The £39/£59 lifetime offer, “One price, yours for life”, the first-200 early-bird and its counter are retired. Any lifetime licence already sold is honoured as a permanent entitlement and is not converted into a subscription.
- Until the TikTok reader passes its tests, public pages use **“TikTok Shop UK (Beta): Excel import coming soon”** (K53). They do not say TikTok upload works now, do not give TikTok export instructions, and do not imply TikTok US or EU support.

3. Pricing

Approved by Akthar, 5 Nov 2026. All public prices and every Stripe price are tax-inclusive. Pro is labelled **“Most popular”** (K54; previously Growth).

Plan	Monthly, inc VAT	Annual, inc VAT (10 × monthly)	Hard unique orders per billing month	Shops	Platforms	History	Seats
Starter	**£39**	**£390**	**500**	1	1 of 3†	3 months	1
Growth	**£79**	**£790**	**2,000**	1	Up to 2 of	12 months	1

Plan	Monthly, inc VAT	Annual, inc VAT (10 × monthly)	Hard unique orders per billing month	Shops	Platforms	History	Seats
					3†		
Pro — **Most popular**	**£129**	**£1,290**	**5,000**	1	All 3†	24 months	2*
Scale	**£199**	**£1,990**	**15,000**	Up to 3*	All 3†	All history, fair use	5*

* Per approved tier table; seat and multi-shop operational details need confirmation (OD5, Q22–Q23).

† **Platform counts while TikTok import is coming soon (K53; recommended default, Q32, not a separate approval).** Usable platforms are Shopify, Amazon and Etsy. The public comparison table and plan cards show **1 of 3 / Up to 2 of 3 / All 3**, and every plan also shows **“TikTok Shop UK (Beta): Excel import coming soon”**. A short catalogue line such as “3 platforms + TikTok coming soon” may be used where one phrase is needed, provided Starter and Growth slot limits stay clear. TikTok does not count toward a usable slot and cannot be selected. After the K53 restore gate, these cells return to **1 of 4 / Up to 2 of 4 / All 4**, and TikTok is again one platform choice, not an extra slot (K24, K25).

The public comparison table includes these two rows with a tap-friendly explanation (not hover-only) on phones and tablets as well as desktop (K47). Do not use a question-mark (?) control or an information icon (i) on the Shops or Seats labels (K55). **Recommended default:** keep the K47 sentences as plain sub-text under those labels, and repeat them in the Pricing FAQ (“What are shops?” and “What are seats?” in 3.2). The FAQ is additional, not a substitute that hides the meaning in the table.

- **Shop:** a shop is one online store connected to this account. If you sell from two Shopify stores, that is two shops. Starter, Growth and Pro include 1 shop. Scale includes up to 3.
- **Seat:** a seat is a person who can sign in to this account. The owner always uses one seat. Extra seats are for people such as a bookkeeper or business partner. Starter and Growth include 1 seat (the owner). Pro includes 2. Scale includes 5.

3.1 Public full comparison (K54)

The Pricing “Full comparison” matrix must expand so every category below is fully visible. Use only features already in this spec. Do not invent rows. Group rows by category. Shops and Seats keep the K47 sentences as plain sub-text under the labels (K55 recommended default) and must not use a “?” control or an (i) icon.

Diagnosis

Capability	Starter	Growth	Pro	Scale
True profit after product, packaging, shipping, ads, fees and returns	Yes	Yes	Yes	Yes
Margin Health Score 0–100, with full breakdown	Yes	Yes	Yes	Yes
Product verdicts: Healthy, Thin, Losing money, No revenue	Yes	Yes	Yes	Yes
All six leaks with £ monthly impact	Yes	Yes	Yes	Yes
Ranked fixes	Yes	Yes	Yes	Yes
Show the maths	Yes	Yes	Yes	Yes
SKU charts (cost and profit split by product)	Yes	Yes	Yes	Yes

Calculators

Capability	Starter	Growth	Pro	Scale
Price and target-margin calculator	Yes	Yes	Yes	Yes
Break-even ROAS and ACOS calculators	Yes	Yes	Yes	Yes
Per-channel ROAS	—	Yes	Yes	Yes

Planning

Capability	Starter	Growth	Pro	Scale
Saved scenarios	—	2 saved (unlimited comparisons)	Unlimited saved	Unlimited saved
Download report (PDF)	—	Yes	Yes	Yes

Costs and tax

Capability	Starter	Growth	Pro	Scale
Overheads	—	Yes	Yes	Yes

Capability	Starter	Growth	Pro	Scale
Own FX rate / conversion costs	—	Yes	Yes	Yes
Tax	Simple UK/UK VAT toggle	Full per-order	Full	Full

Account and data

Capability	Starter	Growth	Pro	Scale
Unique orders per billing month	500	2,000	5,000	15,000
Platforms	1 of 3	Up to 2 of 3	All 3	All 3
TikTok Shop UK (Beta): Excel import coming soon	Coming soon	Coming soon	Coming soon	Coming soon
History	3 months	12 months	24 months	All history, fair use
Shops	1	1	1	Up to 3
Seats	1	1	2	5
Download my data	Yes	Yes	Yes	Yes
14-day free trial includes Pro features	Yes	Yes	Yes	Yes

The platforms row follows K53 / Q32 (usable platforms are Shopify, Amazon and Etsy). The trial row follows K52: Starter, Growth and Pro trials run on Pro; a Scale trial runs on Scale, which includes Pro features. “Unlimited” never bypasses the hard monthly order limit or fair use.

3.2 Pricing FAQ (K54)

Add these questions to the Pricing “Hard limits & billing” FAQ. The answers below are the required default copy.

How do I use this platform?

Start a 14-day free trial and choose a plan. Add your shop and pick the platform it uses (Shopify, Amazon or Etsy). Download the reports you already get from that platform and upload them — we never connect to your store. Add your product costs (and ads, shipping or overheads if you have them). Review the import, then see your true profit, a Health Score and the ranked fixes to make first.

You can look at the sample report first if you prefer. TikTok Shop UK Excel import is coming soon.

What exactly is needed to get started?

A verified account and a payment card to start the 14-day free trial — you pay nothing today. You upload reports you already download from your sales platforms. For Shopify, export the Orders CSV (the Shopify Payments transactions CSV is optional). For Amazon, download a Custom Unified Transaction CSV. For Etsy, download both the Orders CSV and the Order Items CSV (the Monthly Statement is optional). TikTok Shop UK (Beta): Excel import coming soon. You can also enter costs with the product CSV template or type them in. Buyer names, emails, addresses and similar personal details are removed at import. Your plan decides how many platforms you can use at once (Starter 1 of 3, Growth up to 2 of 3, Pro and Scale all 3, while TikTok is coming soon).

How can I recommend a new feature I want to see?

Signed in, open Suggest a feature, write a short note and send it. We save it for review. We don’t publish an email address for this, and we can’t promise a reply.

Can I cancel anytime?

Yes. Cancel any time in one click from Plan & billing — only the account holder (the owner) can do this. We don’t accept cancellation by email. If you cancel during your 14-day trial, you pay nothing. You keep access until your trial or paid period ends; then your account is closed and your data is permanently deleted. Download your data before then.

What happens after the 14-day trial?

A card is collected when you start, and you pay nothing today. Starter, Growth and Pro trials include full Pro features for the 14 days. Unless you cancel in Plan & billing before day 14, your chosen plan starts on day 15 at that plan’s price — not the Pro price, unless you chose Pro or selected Keep Pro. We’ll email you a reminder before you’re charged. After that, features beyond your chosen plan are locked, not deleted; you can upgrade to restore them. TikTok Shop UK Excel import is coming soon.

What are seats?

A seat is a person who can sign in to this account. The owner always uses one seat. Extra seats are for people such as a bookkeeper or business partner. Starter and Growth include 1 seat (the owner). Pro includes 2. Scale includes 5. Only the account holder (the owner) can cancel the trial or subscription.

What are shops?

A shop is one online store connected to this account. If you sell from two Shopify stores, that is two shops. Starter, Growth and Pro include 1 shop. Scale includes up to 3. Unique orders count toward the account’s monthly limit. On Scale, that 15,000-order limit is counted account-wide, not separately per shop (the recommended Scale aggregation default).

What happens if I hit my order limit?

Orders count once per billing month — re-uploading the same orders does not use your allowance again. We'll warn you at 80% and name the next plan. If a file would take you over your limit, we won't import part of it. You'll see how many orders over you are and can upgrade. Upgrades take effect immediately with proration; re-upload after upgrading. Existing results stay visible. During a Starter, Growth or Pro trial the active limit is Pro's 5,000 unique orders; a Scale trial uses Scale's 15,000.

Is my data safe, and where is it stored?

Buyer names, emails, addresses and similar personal details are removed at import. The app, database and backups run on DigitalOcean in London. Transactional email is sent with Amazon SES in the EU (Stockholm). You can Download my data while your trial or subscription is active. If you cancel, you keep access until your trial or paid period ends; then your account is closed and your product data is permanently deleted. Backup copies are removed within 7 days. A GDPR / privacy contact address is in the privacy policy.

Do you connect to my store?

No. We never connect to your store, and no 3PL integration is required. You download the reports you already get from Shopify, Amazon or Etsy and upload them here.

Can I change plan?

Yes. You can upgrade at any time from Plan & billing. The upgrade takes effect immediately and we prorate the difference. After upgrading, re-upload if you were blocked by an order limit. If you are on a Starter or Growth trial and want to stay on Pro after day 14, use Keep Pro before you are charged. Features beyond a lower chosen plan lock rather than delete if you convert below the trial entitlement; upgrading restores them.

Does the price include VAT?

Yes. All published prices and every Stripe price are tax-inclusive. Starter is £39 a month or £390 a year, Growth £79 / £790, Pro £129 / £1,290 and Scale £199 / £1,990, all including VAT.

The Suggest a feature path is the **recommended default** for the third question (Q33), not a separate approval: a signed-in in-app form labelled **Suggest a feature**, with one short text field (recommended maximum 1,000 characters, configurable). Only signed-in users can submit. After submit, show a simple thanks — no timeline and no promise of a reply. Store the timestamp, internal account ID, plan, submitter and text for Akthar to review in an admin view or export. Publish no email address for ideas or cancellation. The form is not a cancel or support-email route (K50). Signed-out visitors who open the FAQ are pointed to sign in first, then to the form.

The comparison table, pricing cards, FAQ and marketing pages have **no Support target row** and publish no response-time or "priority + onboarding" SLA (K41). Pricing and the comparison table may

note **“Every trial includes Pro features”** (approved, K52). That line must not imply a Scale trial is limited to Pro: a Scale trial includes Scale. The public sticky banner stays the approved K43 wording and does not mention the reverse trial.

- **Annual:** 10 months' payment for 12 months' access, approximately 17% off the monthly rate. The annual total, renewal date and renewal terms are shown before checkout. Order usage still resets monthly inside annual subscriptions (12.4).
- **14-day free trial:** every monthly and annual tier includes one 14-day free trial. A card is collected at Checkout so the chosen plan can continue after the trial; nothing is charged today. Starter, Growth and Pro trials include full Pro features and Pro’s 5,000 unique-order limit; a Scale trial includes Scale (K52). Pricing and Stripe Checkout show the exact trial length, that a Starter/Growth/Pro trial uses Pro, the chosen plan’s post-trial price, first charge date and cancellation route before card entry (12.5A, 12.5B). Cancellation through the easy-cancel flow in 12.5A during the trial prevents the charge; otherwise the chosen monthly or annual price is charged automatically on day 15 — not the Pro price, unless the chosen plan is Pro or the owner chose Keep Pro (12.5, K38, K52).
- **Order limits:** 500 / 2,000 / 5,000 / 15,000 unique orders per billing month, counted once, with an 80% warning and full-upload block at the limit (12.4). During a Starter, Growth or Pro trial the active limit is Pro’s 5,000; during a Scale trial it is Scale’s 15,000 (K52).
- **Payment:** Stripe Managed Payments subscriptions and the Stripe customer portal. Link sends receipts and invoices and handles payment support; Margins 365 handles product support. Until the Stripe cutover in 20.5, bank statements may still show the existing live descriptor `LINK.COM* MARGINOS` or whatever is already confirmed on the current Stripe account. Do not invent a replacement descriptor here; confirm it in Stripe when public URLs and the statement descriptor are updated.
- **Cancellation, account closure and deletion:** self-serve only in-platform, by the account holder (owner), through the easy-cancel flow in 12.5A (Plan & billing **Cancel trial** or **Cancel subscription**). Cancelling also closes the account (K51). There is no cancel-by-email route and no email-closure workflow (K50, K51). Paid access/export continue to the paid-period end; trial access/export continue to the original trial end. The cancellation screen and the outbound confirmation email state that the account will be closed and the data deleted on [date], and offer Download my data. At that end all product/user data is wiped and the login is removed. A later signup is a new account; no old results return. Backup removal completes within 7 days (12.6, K39, K51). A GDPR / privacy contact address appears in the privacy policy only.
- **Refund after conversion:** a successful trial conversion is the first payment for the existing 14-day full-refund rule, once per customer. Legal must decide whether that window still applies after a trial and approve the public wording (OD7); statutory rights remain unaffected.
- **Local currencies:** GBP amounts above are approved. v18 local USD/EUR/CAD/AUD amounts await Akthar (OD6); Adaptive Pricing applies only where an approved fixed price does not exist.

4. Language

- **Launch:** English only (UK spelling, for example “Show the maths”).

- All interface text is stored so new languages can be added later without rebuilding screens; the language selector remains hidden until a second language exists.
- Public pages, transactional emails, error states and plan/limit messages use the same plain-English terminology and plan configuration source.

5. Accounts, currency and support

- **Sign-in: “Continue with Google” first**, then **“Continue with email”**. Google sign-in is enabled (K57). Email and password sign-in stays, on every supported device.
- **Email route:** retain v17.1 email + password sign-up/sign-in and separate verification link unless OD8 approves passwordless code+link. Google counts as verified only when `email_verified=true`. Uploads and checkout require a verified account.
- **Password:** minimum 15 characters, no composition rules, breached-password blocking, modern hashing and rate limiting. Password reset follows 5.1 (K57). Passwordless code+link is a Business & Product recommendation pending OD8, not an approved requirement.
- **Home currencies:** GBP, EUR, USD, CAD, AUD. Other sellers choose the closest, normally EUR.
- **Settings:** exactly three top-level sections: 1. **Profile & sign-in:** email, linked Google account, password and reset, sign out of all devices. 2. **Plan & billing:** current plan and billing period, usage, next payment, invoices, change plan, payment updates through Stripe, and a clearly labelled **Cancel trial** action during a trial or **Cancel subscription** action when paid. During a trial it also shows the chosen/scheduled plan (what will be charged), the trial entitlement (Pro or Scale), the first charge date and amount, and Keep Pro when the chosen plan is Starter or Growth (12.5B). A Pro label appears here while the trial entitlement is Pro. Only the owner can cancel or use Keep Pro. Cancel actions follow the easy-cancel flow in 12.5A. Cancellation is not offered by email. 3. **Data & privacy: Download my data (CSV)** and Start fresh. Closing the account is done by cancelling in Plan & billing (K51). Home currency, time zone and tax remain app settings rather than a fourth account section.
- **Account closure (K51):** no **Delete account** button or form, and no email-closure workflow. The owner closes the account by cancelling the trial or subscription in Plan & billing. That cancel also ends the account. Access and Download my data continue until the original trial end or paid-period end; at that date the product data is wiped and the login is removed. Data & privacy explains this path and does not invite the customer to email to cancel or to close the account. The privacy policy lists a GDPR / privacy contact address only, because the law requires a way to contact the controller; that address is not a product cancellation or deletion inbox. K51 supersedes K29’s email-request closure. K29’s “no Delete account button” remains.
- **No account controls for signed-out visitors:** upload, Start fresh, account closure, data export, billing and account settings never appear on public or signed-out pages.
- **Support:** every plan includes email support. Do not publish response-time targets, “priority” SLAs or “onboarding review” as a plan differentiator (K41). The public comparison table, FAQ, pricing cards and marketing pages have no Support target row.
- **Stripe escalations:** the support email is current in Stripe and escalations are answered within 48 hours. Checkout, receipts and FAQ explain the Link statement descriptor.

5.1 Password reset (K57)

Approved by Akthar Uddin, 6 November 2026 at 16:10 Europe/Madrid. Google sign-in is enabled. Email and password sign-in stays. Users who forget their password must be able to recover the account. This flow is not a cancellation route (K50): reset pages and emails must not offer email cancellation or account closure.

The existing Settings item “password and reset” (Profile & sign-in) and the 16.5 mention of password-reset mail remain; this section specifies the signed-out recovery journey that was not previously detailed. OD8 (passwordless code+link) is unchanged and is not this flow.

Sign-in dialog. Under the password field, show a **Forgot password?** link.

Request form. A simple **Enter your email** form sends a reset link through the existing Amazon SES account in `eu-north-1` (Stockholm, K36). After submit, always show the same neutral message, with no account enumeration:

> If an account exists, we’ve sent a reset link.

Unknown addresses, Google-only accounts and email-and-password accounts all see that same message.

Reset page. A secure, time-limited page lets the user set a new password. Expired or already-used links show a clear error and a **Send a new link** option (which returns them to the Enter your email form). Password rules are the same as sign-up (section 5): minimum 15 characters, no composition rules, breached-password blocking and modern hashing.

After a successful reset. The new password takes effect; all other sessions for that account are signed out; send a confirmation email with the subject **Your password was changed**. The user can then sign in with email and password.

Google-only accounts. They see the same neutral on-screen message. **Recommended default (Q34), not a separate approval:** if an email is sent, it tells them this account uses Google sign-in and to use **Continue with Google**; it does not include a link that would set a password. (The alternative — letting them set a password — is not the default.)

Recommended defaults behind config (Q34), not separate approvals:

- Reset link expires after **60 minutes**.
- Each link is **single use**.
- A new reset request **invalidates** any older unused link for that account.
- Rate limiting: **3 requests per email per 60 minutes** and **10 requests per IP per 60 minutes**. If a limit is hit, show “Please wait before requesting another link” (this does not reveal whether an account exists).
- Google-only email treatment as above.

The request form, reset page and messages work on phone and iPad at the K48 breakpoints (type

minima and 44 px targets; no pinch-zoom required).

Reset email (sent when an email-and-password account exists), through SES `eu-north-1`:

- **Subject:** Reset your [PRODUCT_NAME] password
- **Body:** You asked to reset the password for your [PRODUCT_NAME] account.
- **Button:** Reset password
- **Expiry note:** This link expires in 60 minutes and can be used only once.
- **Ignore line:** If you didn't ask for this, you can ignore this email. Your password will stay the same.

Do not mention cancellation or account closure in this email.

Confirmation email after a successful reset:

- **Subject:** Your password was changed
- **Body:** Your [PRODUCT_NAME] password was changed. All other signed-in sessions were signed out. If you didn't make this change, use Forgot password? on the sign-in screen to set a new one.

Google-only email (recommended default):

- **Subject:** Your [PRODUCT_NAME] sign-in
- **Body:** You asked about a password for this [PRODUCT_NAME] account. This account uses Google to sign in. Use Continue with Google on the sign-in screen — there is no password to reset. If you didn't ask for this, you can ignore this email.

The default `PRODUCT_NAME` is **Margins 365** (K58), so these read for example "Reset your Margins 365 password", "Your Margins 365 password was changed" and "Your Margins 365 sign-in".

6. Data input

- **Platforms:** Shopify, Amazon and Etsy CSV imports are live. **TikTok Shop UK XLSX settlement import** remains a P1 build item (9.1, 16.1) and is not publicly offered until the reader passes its acceptance tests (K53). Until then, public copy is "TikTok Shop UK (Beta): Excel import coming soon", with no export instructions and no upload option or platform chip that implies TikTok works. Usable platform slots are among Shopify, Amazon and Etsy only: Starter chooses 1; Growth up to 2; Pro and Scale all 3. During a Starter, Growth or Pro trial the active entitlement is Pro, so all currently usable platforms (those 3) are available until conversion (K52). After the K53 restore gate, TikTok becomes the fourth platform and is one platform choice, not an extra slot, with slots returning to 1 of 4 / up to 2 of 4 / all 4.
- **Shopify:** Orders CSV, with optional Shopify Payments transactions CSV for actual fees. **Amazon:** Seller Central Payments → Reports Repository → Transaction, Custom Unified Transaction CSV, using posting dates. **Etsy:** Orders and Order Items CSVs required, Monthly Statement optional; its Card Processing Fees column is an actual payment fee. Detailed

mapping remains in 16.1.

- **TikTok Shop UK (P1 reader, not public yet):** the importer must read Seller Centre → Finance → Statements → Export / Export history XLSX, Order details and relevant statement fields, per 9.1 and 16.1. Do not put that export path on Home, Pricing, Help, Upload or other public copy until the K53 restore gate.
- **Margins 365 CSV template or manual entry:** currency; SKU/listing ID; unit and packaging cost; seller-paid shipping per order or per-SKU average; return costs; ad spend and optional attributed revenue by channel/date range. Growth and above also accept overheads. Validation, decimal precision, currency and row-by-row errors remain unchanged. Invalid rows are rejected while valid rows import, except a blocked over-limit upload or an all-invalid file.
- **Actual versus estimated fees:** actual uploaded fees take priority. Otherwise the matching platform/region preset is used and labelled **estimated**. Fees and Fee drag require actual data for every compared fee type (12.1, 12.3).
- **Customer personal data:** names, emails, phone numbers, addresses, cities, postcodes, company names, tax IDs, gift messages and buyer/order notes are stripped at import and never stored in cleaned rows, logs, error reports or import previews. Country and permitted US/Canadian/Australian regions are retained for tax. TikTok support files follow the separate explicit-consent rule in 16.1.
- **Raw files:** deleted as soon as import succeeds, fails or is cancelled; unfinished imports cancel after 1 hour. Only cleaned rows remain. This also applies to XLSX.
- **Periods and currency:** monthly figures scale to 30 days. Periods under 14 days show a warning and lower confidence. Orders convert using the ECB daily rate or last published prior rate. Growth and above may enter a user rate for a currency without an ECB rate, labelled **user rate**; Starter excludes those orders with an explanatory count/total. Growth and above show actual or user-entered conversion fees; Margins 365 never guesses them.
- **Multi-file platforms:** one platform set is one upload. A required missing file fails the import; an optional missing fee file succeeds with estimated fees and an explanation.
- **Shops and saved datasets:** Starter/Growth/Pro have one shop; Scale up to 3 per approved tier table. Uploads append and merge by shop and platform; re-uploads do not double-count. Saved datasets are named views of current shop rows, not copies.
- **Order usage:** before import, the service computes how many new unique orders the whole upload would add in the current billing month and applies 12.4. Existing results are never removed by the order limit.

7. Free plan retired; samples and 14-day trials

There is no permanent Free plan. The public sample report and signed-in sample shop stay, labelled as sample data. Every paid monthly or annual tier also has a **14-day free trial**, approved by K38 and replacing K35's no-trial rule. Public wording follows K43; the reverse trial (Pro features during a Starter, Growth or Pro trial) is K52. Cancellation follows 12.5A and also closes the account (K51).

- Trial sign-up requires a verified account and a payment card through Stripe Checkout with Managed Payments enabled. Sample data never consumes allowance. A Starter, Growth or Pro trial receives full Pro features and Pro’s 5,000 unique-order limit; a Scale trial receives Scale

(K52). Checkout uses the K43 + K52 disclosure: a card is collected so the chosen plan can continue after the trial; the customer pays nothing today; a Starter or Growth customer is told they will try Pro and then be charged the chosen plan's price, not Pro.

- One trial per account is required. One trial per payment card, where Stripe supports the necessary checks, is the **recommended default**, not a separate approval. Never log or store full card numbers/CVC.
- Checkout records the trial start/end, chosen plan/interval, trial entitlement (Pro or Scale), post-trial amount and charge date. Unless cancelled, Stripe charges the chosen plan's published price automatically at trial end (day 15). A trial cancellation through 12.5A schedules no charge.
- Cancel any time through the easy-cancel flow in 12.5A. Access and export continue until the original trial end rather than ending immediately. Cancelling also closes the account (K51). The cancellation screen and email warn that the account will be closed and all data deleted on that exact date, and prompt Download my data.
- Send a pre-trial-end reminder email. **Recommended default: 3 days before trial end**, configurable; this is best practice now and supports the reminder obligations under the UK subscription rules effective 1 January 2027. Legal confirms final timing/content.
- Conversion's successful charge is the first payment for the first-payment refund rule. There is no founding-account counter (K42). Whether the refund window still applies after trial conversion requires legal review (OD7).
- An ended trial or paid subscription never restores old data. After the owner cancels, the account is closed at access end (K51); a later signup is a new account.

All v17.1 Free-only rules remain removed: 24-hour deletion, three uploads per day, 50,000-order Free import limit, top-10/top-3 result locks, hidden leak amounts, hidden product £ breakdowns, "Impact locked", Free countdowns, Free upload counters and Free upgrade interstitials. K9 and K14–K16 remain retired. No data is blurred and samples never masquerade as live results.

8. Pro plan (superseded by four subscription tiers)

The single £39/£59 lifetime Pro plan is retired for new sales. The Pro name now means the **£129 monthly / £1,290 annual tier**, not a lifetime licence.

Capability	Starter	Growth	Pro	Scale
True profit, Health Score/confidence, all product verdicts, all six leaks with £ impact	Yes	Yes	Yes	Yes
Ranked fixes, "Show the maths", calculators, target prices, privacy CSV export	Yes	Yes	Yes	Yes
TikTok Shop UK (Beta): Excel import	Coming soon	Coming soon	Coming soon	Coming soon

Capability	Starter	Growth	Pro	Scale
coming soon				
Overheads and per-channel ROAS	—	Yes	Yes	Yes
Tax	Simple UK/UK VAT toggle	Full per-order breakdown	Full	Full
Currency conversion cost / own FX rate	—	Yes	Yes	Yes
Scenarios	—	2 saved (unlimited comparisons)*	Unlimited saved	Unlimited saved
PDF report	—	Yes	Yes	Yes
Uploads / saved datasets (proposal, Q24 open)	10 / 3*	30 / unlimited*	Unlimited / unlimited*	Unlimited / unlimited*
Seats	1	1	2	5

* Growth's two saved scenarios and unlimited comparisons follow the detailed Tiers brief table. “Unlimited” never bypasses the hard monthly order limit or fair-use storage rule. Upload/dataset caps are a recommendation, not an approved additional cap (Q24). Seat/multi-shop details are open (OD5). Tier feature lines are **per approved tier table**.

- All tiers show the complete diagnosis; tier differences are capacity, history, platforms/shops, collaboration, reporting and advanced costs/scenarios, not hidden leak impact.
- **Download report (PDF)** sits beside results, not in the page header, and appears only on Growth, Pro and Scale. No locked PDF icon is shown elsewhere.
- Upgrade prompts appear contextually at a plan limit and name the concrete gain. They never lock existing results or repeat on every screen.
- Existing lifetime licence holders retain their legacy entitlement and are not downgraded or forced into recurring billing. Their migration treatment is in 12.5.

9. Later features (TikTok importer is P1 build; public copy is coming soon until K53)

K25 (5 Nov 2026) approved building a TikTok Shop UK XLSX importer as Beta on every tier, replacing K18’s standing “coming soon”. **K53 (6 Nov 2026, 12:49 Europe/Madrid)** pauses the public promise until that reader is built and tested: public copy must say “TikTok Shop UK (Beta): Excel import coming soon”. The importer requirements in 9.1 and 16.1 stay as a **P1 build item**. Other v17.1 later features remain later: store connectors, mobile apps, EU VAT returns, email alerts, product-level ad tracking, AI recommendations and seller-branded PDF reports.

9.2 Post-launch candidates (not v19)

These items are recorded for later prioritisation. They are **not** in v19 scope, are not proposed for approval now, and must not be promised on the website, in emails or on pricing pages.

1. **Weekly profit email — recommended first after launch.** An opt-in email, for example each Monday, to trial or paid subscribers, summarising the latest true profit, Health Score and the highest-£ leak, with a link back to the account. It uses data the product already has and needs no new platform connection. It must contain no buyer personal data, must stop when access ends (K39), must be easy to turn off, and needs legal and privacy review before any later approval.
2. **Ad platform connections.** Later: connect Meta, Google or TikTok ads so ad spend does not have to be typed or uploaded by hand. This overlaps the existing later items for store connectors and product-level ad tracking.
3. **Alerts.** Later: notify the seller if Health Score drops, a leak grows, or something else needs attention, beyond the existing 80% order-limit email. This overlaps the existing later item “email alerts.”
4. **Accountant-ready export.** Later: a period summary a bookkeeper can use (revenue, costs, fees, ads, returns, profit), beyond today’s cleaned-row CSV and the Growth, Pro and Scale diagnosis PDF. Accountant input is required so the product does not imply tax advice.

9.1 TikTok Shop UK — Beta requirements (P1 build item)

K53 public-copy rule. These requirements stay in force for Development: build and test the reader. They are not a licence to promise or instruct a TikTok XLSX upload on public pages, or to show a working Upload option or platform chip, until the restore gate in 9.1A passes.

- **Export route:** Seller Centre → Finance → Statements → Export / Export history; XLSX with documented tabs including Order details, Statements, Reports, Payments, Reserve and Fees explanation. Parsing uses headers, not guessed positions or a claimed real-file schema.
- **Period:** settlement dates. Use actual order/SKU IDs for merging and duplicate protection; link refunds to the same order/SKU where the file permits.
- **Fees:** actual platform commission, affiliate/creator commission, shipping and adjustments are imported where supplied. Creator/affiliate commission is a separate cost line, never silently merged into generic referral fees.
- **UK commission preset:** 9% including VAT, or 5% only with category evidence and the category shown. Actual fees take precedence; fee preset sources and checked dates are recorded.
- **Reconciliation:** compare statement Net sales − Shipping − Fees + Adjustments with the settlement total, accounting for the documented adjustment-sign ambiguity. If required fields are missing or totals cannot be reconciled, fail safely with no partial import; tell the user what failed and retain previous results.
- **Extra/missing columns:** warn and continue on unknown extra columns; missing required columns produce a plain-language error naming what is missing. No missing fee, VAT, refund or adjustment is fabricated.

- **Estimates and confidence:** missing actual fees or incomplete reconciliation labels affected values **estimated** and lowers confidence by one level, with the reason visible. TikTok does not provide the same VAT breakdown as other inputs; VAT is estimated from VAT-inclusive prices and the seller's tax settings and labelled accordingly.
- **Beta labels (after the K53 restore gate):** selector, import summary, affected results, PDF and Help say **“TikTok Shop UK — Beta”**. They do not imply TikTok US/EU availability. Until that gate, public and Upload copy use “TikTok Shop UK (Beta): Excel import coming soon” instead, and there is no working selector or chip.
- **Feedback:** after import ask “Did these fees match Seller Center?” and offer **“My file didn't work”**. Report the file's platform, unexpected/missing headers and an optional secure support upload, with explicit retention consent and no buyer personal data in ordinary error logs.
- **Beta exit:** real UK files covering ordinary sales, refunds, affiliate/creator commission, reserve/adjustment cases and duplicate/overlapping imports must reconcile before the Beta label can be removed.
- **Known risk:** Akthar has supplied no real TikTok file. Public documentation confirms the export route and broad fee/report structure but not a stable production column contract. Header drift, localisation, adjustment signs, category rates and duplicate/refund linkage remain validation risks. This approved Beta deliberately supersedes the older brief's requirement to wait for real files.

9.1A Public TikTok copy until the reader ships (K53)

Approved by Akthar Uddin, 6 November 2026 at 12:49 Europe/Madrid, in his words: “Soften the TikTok help to ‘Excel import coming soon’ until the reader is built and tested.”

The live Upload surface currently offers only Shopify, Amazon and Etsy CSV, and the importer returns Unknown platform for TikTok. Home and Pricing must not keep telling people to export a TikTok XLSX until that reader works.

Required public line, used everywhere a page previously promised or instructed a TikTok XLSX upload (homepage “What files do I need?”, “How to use this platform”, Pricing, the comparison table, the every-plan “TikTok Shop UK — Beta” line, Help, Features and any similar public copy):

> TikTok Shop UK (Beta): Excel import coming soon

- Do not include TikTok export instructions (no Seller Centre → Finance → Statements → Export / Export history path on public pages).
- Do not offer a TikTok upload option, file-type invitation or platform chip that implies the import works.
- TikTok does not count toward usable platform allowances until it ships. Slot limits apply to Shopify, Amazon and Etsy only.
- How those counts read on Pricing and the comparison table is flagged as **Q32**.
  Recommended default: Starter 1 of 3; Growth up to 2 of 3; Pro and Scale All 3; every plan also shows the required public line above. A short catalogue phrase “3 platforms + TikTok coming soon” may be used where one line is needed, if per-plan slot limits stay clear.

Restore gate. The previous public Beta copy (including export instructions, a working Upload option or chip, “TikTok Shop UK — Beta” as if upload works, and counting TikTok toward 1 of 4 / 2 of 4 / All 4) may be restored only after the TikTok reader has passed its acceptance tests in 9.1, 16.1 and the related import tests. That gate is itself an acceptance test (S47). Until it passes, keep the coming-soon line.

10. Acceptance criteria

10.1 Product and website

1. Home explains the diagnosis, supported platforms, prices, sample report and sign-up without showing account controls to signed-out visitors. It includes the differentiation line in 17.7, the hero sample card under the pre-K54 / K48 scaling rules (the K54 equal-spacing centring is withdrawn), the centred Product section with (i) icons on the six titles and the headline “See where your profit is leaking.”, and “What files do I need?” and “How to use this platform” (17.5, K44) in a centred Get Started block directly under Tools. Those two questions open with a tap on phone and tablet, not hover-only.
2. Pricing has four cards, Pro “Most popular” (monthly and annual), monthly/annual toggle, the expanded full comparison in 3.1, VAT-inclusive amounts, annual charge/renewal terms and the hard-limit FAQ in 3.2. The comparison table explains Shops and Seats in plain language (K47) as plain sub-text, without a “?” or an (i), has no Support target row (K41) and no Email support row (K55). The Pro tile shows “Command centre” above “Most popular”. Every card and Checkout uses the K43 trial strings plus the K52 reverse-trial disclosure: 14-day free trial, that a Starter/Growth/Pro trial uses Pro, exact chosen-plan post-trial amount, first charge date and how to cancel. Pricing and comparison may note “Every trial includes Pro features”. There is no founding discount. Prices and trial terms come from configuration. Call-to-action hierarchy follows 15.4.
3. Public Home, Pricing, Sample report, Sign in, Terms, Refunds & cancellation, Privacy, Contact & company details, Help and legal DPA/subprocessor pages work as distinct routes on mobile phone, tablet/iPad (portrait and landscape) and desktop, meeting 15.3.
4. Sample data is labelled on the public sample and in-account sample shop; it never contributes to order usage. Guided onboarding goes sample shop → choose plan → add shop → upload → add costs → review import → first results.
5. A subscriber's first dashboard leads with the highest-£ ranked fix and top three leaks, then supporting detail; no sum of leaks is presented as money lost.
6. All tiers show true profit, score/confidence, all product verdicts, all six leaks with £ impact, ranked fixes, calculators, target prices, “Show the maths” and CSV data export.
7. Plan gating matches sections 3 and 8, using the active entitlement (trial entitlement during a trial, chosen plan after conversion — K52). Existing lifetime users retain their entitlement.
8. Header has no PDF icon or dark-mode toggle. PDF report appears next to results only on tiers including it. App is light only.
9. Google sign-in is offered first and works (enabled, K57); email and password sign-in works independently, including the 5.1 password-reset flow. Signed-out pages expose no account API data.

10. Settings has the three sections in 5, including the 12.5A easy-cancel flow (Cancel trial / Cancel subscription for the owner only), and has no Delete account control. Cancellation also closes the account (K51). It shows the exact access-end, account-closure and data-deletion date and the export route; the outbound confirmation email repeats them. There is no cancel-by-email route and no email-closure workflow (K50, K51). Help, FAQ and support pages must not offer email cancellation or email account closure.
11. Upgrade prompts name the limit and next tier. No blurred data, locked placeholder, early-bird counter, founding / first-100 / 25%-off offer, Support target or published support SLA, Free countdown, Free upload counter or lifetime copy remains. Until the K53 restore gate, public TikTok copy is “TikTok Shop UK (Beta): Excel import coming soon” and must not include export instructions or a working-looking upload; after that gate, a lingering public “coming soon” TikTok promise must not remain.
12. Each signed-out marketing screen has one primary call-to-action labelled exactly “Start 14-day free trial”. Mixed labels such as “Start trial” or “Start free trial” do not appear. Secondary actions are quieter (15.4).
13. Phone and tablet/iPad journeys in 15.3 pass, including the pricing comparison table, sticky banner behaviour and tap-friendly Shops/Seats help.
14. Layout and scaling meet 15.5 at every listed breakpoint, including type minima, content-width rules, hero image scaling with the content, no large one-sided empty regions and no zoomed-out page. The pre-release screenshot matrix is complete.
15. The homepage Product section uses the approved K49 copy in 17.6: an outcome-led headline, one result line per card, jargon in tap-friendly tooltips, no “Paid plans unlock the full score breakdown”, and one clearly labelled sample proof number.
16. Reverse trial (K52) matches 12.5B: Starter/Growth/Pro trials run on Pro features and the 5,000-order limit; Scale trials run on Scale; Checkout states the chosen-plan charge; the signed-in trial banner, Pro label and Keep Pro behave as specified; conversion locks extras rather than deleting them; order-limit overrun after conversion follows 12.4; the reminder includes the required K52 facts.
17. Public TikTok copy matches K53 and 9.1A: “TikTok Shop UK (Beta): Excel import coming soon”, with no export instructions and no upload option or chip that implies it works, until the reader passes S47.
18. Homepage, sample-report and pricing layout and content in 17.7, 3.1 and 3.2 match K54 as amended by K55: Product and Get Started blocks centred; hero follows K48 not the retired equal-spacing rule; Product headline “See where your profit is leaking.”; Most Popular on Pro with “Command centre” above it; expanded comparison with no Email support row; FAQ answers in 3.2; two Open Sample Shop buttons on Sample report plus the header trial CTA; readable sample card and ranked leaks on phone and iPad.

10.2 Accounts, data and privacy

1. Email verification works; an unverified Google email is not accepted as verified. Uploads and checkout remain locked until verification.
2. Sessions use secure httpOnly SameSite cookies; reset/sign-out-all works; secrets and tokens never appear in logs.
3. Personal data in test fixtures appears nowhere in cleaned data, exports, previews, logs or error

reports; permitted country/region data remains.
4. Original CSV and XLSX files are absent after success, failure, cancellation or a 1-hour abandoned import.
5. Download my data provides cleaned order rows and cost data, never the original file.
6. Cancelling in Plan & billing also closes the account (K51). Access and export continue to the disclosed end; at that end product data is wiped and the login is removed, including from backups within 7 days. There is no email-closure workflow. A confirmation email is sent. A GDPR contact address appears in the privacy policy only.
7. Start fresh clears product data but preserves account, subscription/legacy licence, billing history, shops/team configuration and settings; Cancel changes nothing.
8. For every tier and interval, Checkout collects a card without charging during the 14-day trial; day-15 conversion charges the exact displayed chosen-plan amount once (not the Pro price unless the chosen plan is Pro or the owner used Keep Pro); cancelling before trial end produces no charge.
9. One account cannot receive a second trial. The recommended card-level prevention works where Stripe permits and fails safely without exposing card data.
10. Trial-ending reminder is sent at the configured lead time (recommended default 3 days) and includes the K52 facts in 12.5B; cancellation screen/email and failed-payment warnings accurately state deletion/export consequences.
11. At trial/paid access end and after final payment failure or immediate first-payment refund, all user product data is wiped; backup copies are absent within 7 days and restore tests do not resurrect them.
12. After cancel-and-close, the login does not remain after access end. A later signup is a new account and contains no old orders, costs, shops, results or settings. Legally required billing records follow their disclosed separate retention rules.

10.3 Existing calculations and import regression

All v17.1 calculation examples remain mandatory: £20.00 target price gives exactly 10.0% net margin with shipping charged; blended £21.10 gives 10.0% and £21.09 does not; £30 order-level refund gives 0.6 and 0.3 estimated units; the v16 Health Score, verdict, fee drag, high returns, ad pro-rating and deduplication tests pass unchanged. TikTok's Beta safety and reconciliation tests are added without altering these formulas.

11. Risks and assumptions

- **No real TikTok file:** Beta may fail on real header variants. Safe failure, user reporting and fixture collection are required; no claim of validated TikTok accuracy is allowed.
- **Top-end pricing:** £39–£199 is approved but market willingness and annual mix need measured post-launch review. Competitor prices are not customer validation.
- **Name/legal:** A historical **marginos.com** name conflict prompted K37 (do not copy that company’s site, design or content). The approved user-facing name is now **Margins 365**, with target domain **margins365.com** (K58). Trademark clearance is not implied. Stripe deemed-supplier wording, VAT and UK subscription rules still require specialist review.

- **Scale details:** seats/multi-shop and aggregate-versus-per-shop usage are unresolved. Build cannot invent a billable entitlement.
- **Public pages and brand verification:** every route currently serving one app shell must be replaced with real pages; Google and Stripe review public content. Until cutover, public pages may still be served on marginos.online; migrating to margins365.com and Google brand verification are cutover tasks (20.5). Trademark clearance is not implied.
- **Email region:** Stockholm/EU processing is approved (K36). Privacy/DPA wording must match the live configuration and still receives legal review.
- **Deletion at subscription end:** cancellation does not retain data for reactivation. All product/user data is wiped when access ends, with dated cancellation warnings and export; backups clear within 7 days. After the owner cancels, the account is closed at access end and the login is removed (K51). Active legacy lifetime data is unaffected unless the user uses Start fresh or a statutory erasure request through the privacy-policy contact.
- **Annual order counting:** monthly Stripe periods inside annual terms are required so annual users are not restricted to one yearly bucket.
- **Local prices:** v17.1 fixed currency amounts are retired and cannot be reused as v18 subscription prices.

12. The calculations

12.0 Definitions

- **Revenue:** product sales plus shipping charged, minus discounts, excluding VAT / sales tax / GST. Refunds are not deducted here; they are counted in return cost.
- **Product and packaging cost:** unit cost + packaging cost, per unit sold.
- **Shipping cost:** what the seller paid to ship orders (not what the customer paid). Excludes FBA orders, whose fulfilment fees count as fees.
- **Net shipping cost:** shipping cost minus shipping charged (can be negative).
- **Shipping-eligible revenue:** revenue from non-FBA physical orders. The Shipping part and the Shipping subsidy leak divide by this, not by total revenue.
- **Fees:** marketplace, payment and fulfilment fees (actual where uploaded, otherwise "estimated" presets), mapped to the fee types in 12.3.
- **Order-level amounts split across lines (allocation):** any amount given for a whole order rather than for each line (shipping charged, the seller's shipping cost per order, order-level fees including fixed per-order fees such as 20p, order-level discounts, order-level return costs and refunds) is split across the order's lines **by line value** (each line's share of the order's product revenue before order-level discounts). The split amounts are flagged **"allocated"** in "Show the maths" and add up exactly to the order amount (any rounding remainder goes to the last line). If every line in the order has zero value, the amount is split by units. A product's per-unit amount = the total allocated to its lines ÷ its units sold. Amounts the platform already gives per line are used as given.
- **Physical and digital orders:** Shopify: a line is physical when its "Lineitem requires shipping" column is true; Amazon: always physical; Etsy: physical unless the user marks the listing (or the whole shop) as digital in settings. An order is physical if any line is physical.

- **Return cost:** refunded amount + return shipping + return or restocking fees (from the platform files or the template).
    - **Refund allocation:** where a refund is given for the whole order rather than per line, it is split across the order's lines by line value, using the allocation rule above, and flagged **"allocated"** in "Show the maths".
- **Contribution margin (CM):** revenue − product and packaging cost − shipping cost − fees − return cost. CM % = CM ÷ revenue.
- **Net profit (true profit):** CM − ad spend − currency conversion fees (Pro) − overheads (Pro, if entered). Net margin = net profit ÷ revenue.
- **Pro-rating to the period:**
    - **Overheads** are entered per month and are counted as monthly overheads × days in the period ÷ 30.
    - **Ad spend** entries cover their own date range; each entry counts only for the days that overlap the period (amount × overlapping days ÷ days in the entry's range). "Show the maths" shows the pro-rating.
- **Product net profit:** the product's CM − its share of ad spend. Overheads and conversion fees are store-level only and are not spread across products.
- **Blended ROAS:** revenue ÷ total ad spend for the period (all channels). **Per-channel ROAS** (Pro) = the attributed revenue the seller enters for that channel (from the ad platform's own report) ÷ that channel's ad spend. Where no attributed revenue is entered, only blended ROAS is shown. Per-channel ROAS is shown for information; the Health Score and leaks use blended ROAS.
- **Break-even ROAS:** 1 ÷ CM %. If CM % is 0 or below, break-even ROAS is "not reachable".
- **Break-even ACOS:** equal to CM % (ads can take up to this share of revenue before the store loses money).
- **Ad spend per product:** total ad spend spread across products by their share of revenue.
- **Unit return rate:** units refunded ÷ units sold.
    - **Estimated units refunded:** where a file gives only a refund **amount** (for example Shopify's order-level refunds) and not the units refunded, units refunded for each line = the refund allocated to that line (refund allocation, above) ÷ the line's unit price, capped at the line's quantity. The result can be a fraction (for example 0.6 units) and is not rounded to whole units. Any unit return rate that uses estimated units is labelled **"estimated from refund amount"** in "Show the maths". It lowers the confidence level by one only when a High returns leak that is shown uses it (12.1).

12.1 Health Score formula (0-100)

Weighted total of six parts. Each part scores 0-100 on a straight-line scale between the points below (Ad efficiency uses two straight-line segments, see the table).

Part	Weight	100 points at	0 points at
Net margin	35%	20% or more of revenue	0% or below
Ad efficiency	20%	Blended ROAS 1.5× break-even ROAS or better	0.75× break-even or worse. Piecewise: straight line from 0 points at 0.75× to 50 points at exactly 1.0×, then straight line to 100 points at 1.5×
Returns	15%	Return cost 3% of revenue or less	15% or more
Product mix	10%	0% of revenue from Losing money or Thin products	50% or more
Fees	10%	Actual fees no more than 1 percentage point above the matching preset rate (like for like, 12.3)	10 percentage points or more above it
Shipping	10%	Net shipping cost 5% of shipping-eligible revenue or less	15% or more

Rules

- **General rule:** any part without the data it needs is **dropped**, and the remaining weights are **rescaled proportionally** to total 100%. The breakdown says which parts were dropped and why.
- **No ads:** Ad efficiency is dropped.
- **CM 0% or below with ad spend:** Ad efficiency scores **0**, and the breakdown says "Every ad pound loses money" (with the home currency's name, e.g. "Every ad dollar loses money").
- **Fees:** dropped unless every compared fee type (12.3) is actual (presets alone, or a mix of actual and preset, are "estimated").
- **Shipping:** dropped when there is no shipping cost (digital products, all orders FBA, or shipping cost not entered). If physical, non-FBA orders exist but no shipping cost was entered, a "shipping cost missing" warning is shown. Free shipping is not penalised as long as net shipping cost stays at 5% of shipping-eligible revenue or less.
- **FBA orders** (Amazon fulfilled by Amazon): excluded from Shipping (both the cost and the revenue used to divide it); Amazon's fulfilment fees count under Fees.
- **Rounding:** each part and the final score are rounded to whole numbers using decimal half-up rounding (12.3). The score is rounded **before** banding.
- **Bands: Strong** 80 or more; **Needs attention** 50 to 79; **At risk** below 50. ("Healthy" is used only as a product verdict.)
- **Revenue of 0 for the whole store:** no score is shown; the user is asked to check the file.
- **Confidence level** (shown beside the score): **High**, **Medium** or **Low**. It starts at High and

drops one level for each of the following, to no lower than Low:

- a part dropped because data is **missing** (fees estimated; shipping cost missing for physical, non-FBA orders). Parts that are genuinely **not applicable** (no ads; no shipping because all orders are digital or FBA) do not lower it.
- a period under 14 days
- fewer than 30 orders in the period (small samples swing a lot)
- products with "cost missing" making up more than 10% of revenue
- a High returns leak shown that uses units refunded estimated from refund amounts (12.0)
- The breakdown lists each reason.

12.2 Product verdict rules

Margins are rounded to 0.1% (decimal half-up) before the verdict is set.

- **Losing money:** net profit below zero (even if the margin rounds to 0.0%)
- **Thin:** net profit zero or above and net margin 0.0% up to 9.9%
- **Healthy:** net margin 10.0% or more
- **No revenue:** the product has costs but no revenue in the period (for example free samples or replacements sent with no sale, or only out-of-period refunds). Its costs count in the Loss-making product leak. A product whose sales in the period were all refunded still has revenue (refunds are a return cost, 12.0), so it shows as Losing money, not No revenue.

12.3 Launch leak rules

Shipping subsidy and Fee drag trigger at the point where their matching Health Score part starts losing points. **Unprofitable ads** is different: the Ad efficiency part starts losing points below 1.5× break-even ROAS, but the leak triggers only **below 1.0× break-even ROAS** (where ads cost more than the contribution margin they bring in), or when CM is 0% or below with ad spend. Between 1.0× and 1.5× the score is lowered but no leak is shown. High returns, Loss-making product and Thin pricing are product-level tests with no exact matching part. **No leak impact is ever below 0.**

Leak	Triggers when	Monthly impact (one formula per leak, scaled to 30 days)	Recommendation (with calculated figure)
Unprofitable ads	Blended ROAS below 1.0× break-even ROAS, or CM 0% or below with ad spend	Ad spend − CM, where a CM below zero counts as zero (so the impact is never more than the ad spend), **never below 0**	Reduce or pause spend until ROAS reaches break-even ROAS (shown); if CM is 0% or below, fix pricing and costs first because every ad pound loses money
High returns	Product has at least 10 orders and its unit return	Product return cost × (1 − target rate ÷ product rate),	Review sizing, photos and descriptions; shows profit

Leak	Triggers when	Monthly impact (one formula per leak, scaled to 30 days)	Recommendation (with calculated figure)
	rate is above 2× the store average (excluding that product), or above 15%. If the store average excluding the product is 0% or can't be calculated (a single-product store), only the 15% test applies	**never below 0**. Target rate = the lower of the store average excluding the product and 15%; if that average is 0% or can't be calculated, 15%. Uses estimated units refunded where needed (12.0), labelled "estimated"	gained at the target rate
Loss-making product	Verdict is Losing money or No revenue	The product's monthly loss (for No revenue products, its monthly costs)	Raise price to the target price (shown), or discontinue. For **No revenue** products (for example free samples or replacements): stop sending them or charge for them, showing their monthly cost
Shipping subsidy	Net shipping cost above 5% of shipping-eligible revenue	Net shipping cost − 5% of shipping-eligible revenue	Raise free-shipping threshold or add a shipping charge; shows amount to recover per order on every paid tier
Fee drag	Compared actual fees more than 1 percentage point above the matching preset rate, like for like (never fires on estimated fees)	(Compared actual fee % − matching preset fee %) × compared revenue, i.e. the full excess over the preset, on the same basis as the Fees part	Review fee plan or payment settings; shows the excess fees per month
Thin pricing	Verdict is Thin **and** the product's net margin is below the target margin (so a subscriber's target below 10% can switch it off)	(target margin − product net margin) × product revenue, **never below 0**. Target margin is the same one the target price uses: 10% by default, or the subscriber's own target (12.3, Formulas)	Raise price to the target price (shown)

- **No summed total at launch.** Leaks can overlap (for example a product can be Thin and have High returns), so impacts are shown one by one and ranked. A de-duplicated total is a later update.
- Leak impacts are rounded to whole units of the home currency.

Fee-type mapping and presets (for the Fees part and Fee drag)

Every fee line from every file is mapped to one fee type. Only **compared** fee types count towards the Fees part and Fee drag; the others still count as costs in CM but are never compared with a preset.

Fee type	Examples	Compared with preset?
Referral / commission	Amazon referral fee, Etsy transaction fee	Yes
Payment processing	Shopify Payments fee, Etsy card processing fee	Yes
Listing	Etsy listing and renewal fees	Yes
Fulfilment	Amazon FBA fulfilment and storage fees	No (counted in fees, not compared)
Shipping labels	Labels bought through Amazon or Etsy	No (counted as shipping cost)
Advertising	Etsy Ads, Offsite Ads, Amazon Sponsored Products in the report	No (counted as ad spend)
Subscriptions and VAT on fees	Shopify plan, Etsy Plus, VAT charged on fees	No (subscriptions are overheads if entered; VAT on fees follows 12.8)

- **Preset table:** one row per platform × region (UK, EU, US, Canada, Australia) × compared fee type, giving the standard rate (% and any fixed fee per order). The developer fills it from each platform's published fee pages at build, records the source link and date for every row, and Business & Product signs it off. It is rechecked at least every 6 months.
- **Like-for-like comparison:** the matching preset rate is worked out on the same orders as the actual fees: for each compared fee type, the preset for each order's platform and region, weighted by that order's revenue. Compared revenue = the revenue of orders with actual data for every compared fee type.
- A platform or fee type is only compared when its actual data is uploaded; otherwise it uses the preset, labelled "estimated", and the Fees part and Fee drag stay off (12.1).

Formulas

- **Target price** (before VAT/GST/sales tax) = (unit cost + packaging + per-unit shipping cost + per-unit ad cost + fixed per-order fees per unit) ÷ (1 − percentage fees − product return cost rate − target margin) − per-unit shipping charged.
    - **Why shipping charged is subtracted at the end:** revenue includes shipping charged (12.0), and percentage fees, return cost and the target margin are all shares of that revenue. Solving on revenue and then taking off the shipping the customer already pays makes the product reach exactly the target margin. (Using net shipping cost in the top line instead would leave the margin short whenever the customer pays shipping: for example £18.67 gives 5.6% instead of 10%, while the formula above gives £20.00 and exactly 10%.)
    - Per-unit shipping cost = the product's shipping cost ÷ units sold; per-unit shipping charged = the shipping charged on its orders ÷ units sold (order-level shipping is split by line value, 12.0).
    - Where a platform's percentage fees **don't** apply to shipping charged, use: target price = (unit cost + packaging + per-unit shipping cost + per-unit ad cost + fixed per-order fees per unit − per-unit shipping charged × (1 − product return cost rate − target margin)) ÷ (1 − percentage fees − product return cost rate − target margin).
    - If the result is 0 or below (shipping charged alone covers the costs), the target price is shown as the lowest price, 0.01, with the note "Shipping charged already covers this product's costs".
    - **Per-unit ad cost is held at its current amount** (the product's current ad spend share ÷ units sold). Because ad spend is spread by revenue share, a higher price would otherwise pull more ad spend onto the product and the margin would fall short of the target. "Show the maths" states this assumption: "assumes ad spend on this product stays at £X per unit".
    - Product return cost rate = the product's return cost ÷ its revenue (store average if the product has fewer than 10 orders).
    - Where a platform charges percentage fees on the tax-inclusive price, percentage fees are multiplied by (1 + tax rate).
    - If the seller's prices include VAT/GST, the price shown to them = the unrounded target price × (1 + tax rate), then rounded up to the next 0.01.
    - Target margin defaults to 10% (the Healthy threshold); Subscribers can set their own. The Thin pricing leak uses the same target margin.
    - **Already at target:** if the target price is at or below the product's current average price, it is shown as "Current price already reaches your target margin (target price £X)", never as "raise price".
    - **Products sold on more than one platform:** each input is a **blend of the product's own sales across its platforms**, so one target price covers the current sales mix: percentage fees = the product's total percentage-based fees ÷ its total revenue (this weights each platform by revenue and allows for platforms that don't charge fees on shipping); fixed per-order fees, shipping cost and shipping charged per unit = the product's totals ÷ its total units sold (FBA units add no shipping cost); return cost rate = the product's total return cost ÷ its total revenue. "Show the maths" names the platform mix (for example "60% Shopify / 40% Amazon by revenue") and says it

assumes the mix stays the same. A separate target price per platform comes later with the channel comparison (section 9).
    - The result is **rounded up** to the next 0.01 so the product reaches at least the target margin.
    - If the denominator is 0 or below, show **"Can't reach the target margin at any price"**, with the cost share that causes it (fees, returns or the target margin).
- **Break-even price** = target price with a 0% target margin.
- **Break-even ROAS** = 1 ÷ CM %; **break-even ACOS** = CM % (see 12.0).
- **Rounding:** all money and percentage calculations use **decimal arithmetic** (not floating point) with **half-up** rounding (0.05 rounds up, so 5.55% → 5.6%), except where a rule says "rounded up". Margins and percentages to 0.1%; money to 2 decimal places (whole units in summaries); scores to whole numbers.

Scenario rules (Pro)

- A scenario changes price, product cost, ad spend, return rate, shipping charge or discount, for the whole store or for chosen products.
- **Units sold stay the same** (no demand modelling); "Show the maths" says so.
- When only price changes, **ad spend per unit is held at its current amount** (as in the target price), so a product priced at its target price shows the target margin.
- A change in ad spend is spread across products by revenue share at the scenario's prices.
- A return-rate change scales the product's return cost in proportion.
- Everything else (fees, tax, Health Score, verdicts, leaks) is recalculated with the normal rules.
- **Approved preset table and how presets are applied:** see 16.2.

12.4 Uploads, plan history and hard monthly order limits

Approved by Akthar, 5 Nov 2026. This replaces every Free upload rule, “no monthly order caps” claim and soft-limit recommendation.

- An upload is one file or one complete multi-file platform set. Re-uploads merge using the canonical order/deduplication rules in 12.7. Sample data is not an upload and consumes no order allowance.
- **Plan history:** Starter 3 months; Growth 12; Pro 24; Scale all imported history within fair use. Results never show data older than the active entitlement's history window; data is not deleted merely because it falls outside that window. Rows outside the window are locked/hidden and show an upgrade prompt; upgrading restores them immediately. Downgrade enforcement for paid plan changes and legacy migration are in Q27. Trial conversion follows K52: extras lock immediately, and nothing is wiped (K39 runs only when access ends).
- **Usage period:** monthly subscription periods. Monthly plans reset on the monthly billing date; annual plans reset on the same monthly subscription-period boundary, including the annual term's monthly boundaries. Legacy lifetime accounts use the equivalent monthly account-usage anniversary. An unsuccessful retry does not create extra usage periods.
- **Definitions:** U is the set of canonical unique order IDs already counted in the current usage period. N is the set of canonical unique order IDs in the proposed whole upload that are not

already in U. L is the active entitlement limit (the chosen plan's paid limit after conversion; Pro's 5,000 during a Starter, Growth or Pro trial; Scale's 15,000 during a Scale trial — K52). Orders already seen on another day or in another file of the same period are not counted again. Multiple line items are one order; valid order/refund changes update the same order, not a new one.

- **Projected usage and block rule:**

$$projected = |U \cup N|$$

$$new_unique = |N|$$

$$overage = max(0, projected - L)$$

Allow the entire import only when $projected \leq L$. When $projected > L$, commit **no rows** from the proposed upload. Existing rows, results, costs, saved datasets and usage remain unchanged.

- **User message at block:** show current usage, the limit, new_unique, projected usage and $overage$: "This file would add [N] new orders, taking you to [projected] of [L] orders this billing month, [overage] over your limit. Upgrade to [next plan] to import it. Your existing results are unchanged." Show an Upgrade action and the option to cancel. Never import only the first $L - |U|$ orders.
- **80% warning:** when post-import usage first reaches or crosses 80% of the active limit, show an in-app notice and send one email naming the next plan, its limit and current usage. One warning per account and usage period; do not repeat it on every upload. Recompute entitlement server-side.
- **Limit reached:** existing results and export remain available. Further uploads that add unique orders are blocked; an entirely duplicate re-upload is allowed to update/reconcile without increasing usage and never bypasses data validation.
- **Upgrade:** immediate, with Stripe proration; the new limit and entitlement apply once Stripe confirms. The blocked file is not retained; the user re-uploads it. Downgrade of a paid plan is scheduled at next renewal, with the new limit/history effective then; existing results remain accessible subject to the new history window. Trial conversion to the chosen plan is not a paid downgrade: extras lock immediately (K52) and data is not deleted.
- **Trial conversion and usage (K52):** converting from a trial does not reset U. Unique orders counted during the trial stay in the current usage period. If after conversion $projected$ against the chosen plan's L is already above that limit, existing results stay visible and new unique-order uploads are blocked until the owner upgrades to a plan whose limit covers current usage, or until the next monthly usage reset (12.4). The day-15 conversion event itself is not a usage reset.
- **Failed payment:** during the retry grace state the current plan remains active; after final failure it ends and no new uploads occur. After final failure, deletion follows 12.6; resubscription starts fresh and never restores deleted data.
- **Fair use:** the separate 500,000 stored-order fair-use ceiling remains and is not a substitute for monthly hard limits.
- **Scale aggregation:** 15,000 account-wide is the recommended default, not an approval (Q23). Keep aggregation scope configurable; do not silently bill or count per shop.

12.4A Executable acceptance tests for hard order limits

ID	Starting usage / upload	Expected result
L1	Starter, 0 used; upload 500 distinct orders	Allowed; usage 500
L2	Starter, 499 used; upload 1 new order	Allowed; usage 500; warning was sent at 400
L3	Starter, 500 used; upload 1 new order	Blocked; new_unique 1, projected 501, overage 1; no rows committed
L4	Starter, 450 used; upload 100 new orders	Blocked in full; projected 550, overage 50; usage stays 450 and previous results byte-for-byte equivalent
L5	Starter, 450 used; upload 100 rows representing 50 orders, two lines each	Allowed if 50 unique; usage 500
L6	Growth, 1,500 used; upload 600 orders of which 100 already exist in this period	500 new; projected 2,000; allowed
L7	Same import retried after success	No additional usage; duplicate/reconciliation result, not another 2,000
L8	Two uploads concurrently each project beyond remaining capacity	Transaction/lock permits only what fits; no race exceeds L
L9	Last order of old monthly period plus first of new	Old order remains in old usage set; new period starts at 0 on the billing boundary
L10	Annual plan at monthly boundary	Usage resets monthly while paid annual access/history continue
L11	399 used then import to 400 on Starter	In-app notice + one email naming Growth and 2,000 orders; repeat import sends no second warning
L12	Entirely duplicate upload at the limit	Allowed to reconcile; usage unchanged; no false overage
L13	All-invalid or malformed over-limit-looking file	Validation/limit failure imports nothing; raw file deleted; no usage added
L14	Starter blocked at 550 projected, upgrades to Growth	Stripe proration confirmed, L becomes 2,000 immediately, user re-uploads all 100 new orders

ID	Starting usage / upload	Expected result
		successfully
L15	Blocked import on Pro/Scale	Existing results, exports and saved datasets remain visible; no partial rows
L16	Expired/cancelled subscription	New uploads blocked; export continues only until the stated access end; all product data is then wiped and a later subscription starts fresh
L17	Starter or Growth trial uploads 2,500 unique orders (allowed under Pro's 5,000), then converts to Starter (500) or Growth (2,000) where u exceeds the new L	Existing results stay visible; further unique-order uploads are blocked with the usual overage message; usage stays 2,500; conversion does not wipe data (K39) and does not reset u; upgrade or the next monthly reset unblocks

12.5 Trials, prices, subscriptions, refunds and legacy lifetime licences

Approved 5 Nov 2026, including K38 at 14:18 Europe/Madrid. Stripe Managed Payments subscriptions; one active subscription/trial per account.

- The four plans and tax-inclusive GBP amounts are in section 3. Pro is Most popular (K54). Annual = 10 × monthly. There is no founding or introductory discount (K42). Every paying account is charged the published price.
- **Trial Checkout:** verified signed-in account, subscription mode, `managed_payments[enabled]=true`, a valid payment card and `trial_period_days=14` or the equivalent provider-supported trial configuration. Record account ID, chosen plan/price, trial entitlement (Pro or Scale), trial start/end, first charge amount/date and cancellation state. No second active subscription/trial. A Starter, Growth or Pro trial uses Pro features and Pro's 5,000-order limit; a Scale trial uses Scale (K52).
- **Trial eligibility:** one per account. **Recommended default, not approval:** also prevent repeat trials on the same payment card where Stripe permits, using provider-hosted checks without retaining sensitive card data. Eligibility denial offers ordinary paid Checkout, not a silent charge.
- **Pre-contract disclosure:** Pricing, Checkout and emails use the K43 Option 1 strings, extended by K52 so Checkout also states that a Starter or Growth trial tries Pro and that day 15 charges the chosen plan, not Pro. They state that the trial is 14 days free, that a card is collected but the customer is not charged today, the monthly or annual price after trial for the chosen plan, the exact first charge date, that the charge happens automatically on day 15 unless cancelled, and that the customer can cancel any time before then in one click from Plan & billing. The same facts appear in the trial confirmation email. Do not offer cancellation by email. The public banner uses the approved 00:34 line and does not mention the reverse trial. Do not lead with the retired live phrase "Card required. Cancel before day 14 to pay nothing." Checkout must state that a card is collected, the exact chosen-plan charge amount and date,

that a Starter/Growth trial uses Pro, and that cancellation is in-platform from Plan & billing.

- **Reminder:** send before trial end. **Recommended default:** 3 days before, configurable. It states the chosen plan, amount, exact charge date, in-platform cancellation link, and the K52 facts in 12.5B (Pro features that will lock, any order-limit overrun warning, and Keep Pro when the chosen plan is Starter or Growth). UK subscription rules effective 1 January 2027 require the applicable reminders; legal confirms final cadence and wording. Delivery failure alerts support but does not silently change the disclosed charge.
- **Trial cancellation:** no charge. Uses the easy-cancel flow in 12.5A. Recommended default is access/export until the original trial end, then deletion; do not cancel access earlier than disclosed. Undo cancellation before the end may resume the same trial only if Stripe still shows it active and no new trial is created.
- **Trial conversion:** automatic first charge on day 15 for the displayed chosen-plan monthly or annual amount, not the Pro price unless the chosen plan is Pro (K52). Successful conversion counts as the first payment for the refund rule. There is no founding counter (K42). Failed conversion follows normal retry rules. On conversion, entitlement becomes the chosen plan and extras beyond that plan lock rather than delete (12.5B).
- **Entitlement record:** provider-neutral record contains chosen/subscribed plan, interval, trial entitlement (Pro or Scale, distinct from the chosen plan), Stripe customer/subscription/price IDs, state, trial start/end, current period start/end, next charge/renewal, scheduled plan change/cancellation, data-deletion due date, last reconciliation and any legacy lifetime entitlement. UI never trusts browser-supplied plan state.
- **States:** `incomplete`, `trialing`, `active`, `past_due` (access retained during retries), `cancel_at_period_end` (trial or paid access until its disclosed end), `ended` (deletion due/executed), `refunded_first_payment` (access ends immediately and deletion runs) and `legacy_lifetime`. Unknown states preserve last known entitlement and alert rather than reacting to event order.
- **Changes:** upgrade immediately with confirmed Stripe proration; downgrade at next renewal. Change monthly/annual at renewal unless Stripe confirms an immediate prorated flow. Paid cancellation schedules end of paid period; trial cancellation schedules original trial end. Access/export remain until the disclosed end.
- **Failed payments:** Stripe Smart Retries for up to 14 days, access retained, persistent banner and update-card route. Banner and retry emails warn that final failure ends access and wipes all product data; offer export during retries. Recovery resumes normal billing without data loss; final failure ends access and triggers deletion immediately.
- **Refund:** successful trial conversion is the **first payment**. Existing rule: refundable in full on request within 14 days of that first payment, once per customer, followed by immediate access end and data deletion. Whether this refund window still applies after a trial is expressly reserved for legal review (OD7); do not soften or remove the rule in product copy until legal/Akthar decides. Later periods are not partially refunded; statutory rights remain.
- **Disputes:** lost dispute ends subscription/renewals and triggers deletion at access end; open disputes preserve last known state until Stripe's latest state says otherwise. Dispute fee is £15. Refund/dispute processing and redacted records follow 12.10.
- **Legacy lifetime:** every licence already sold remains valid with purchase/refund/dispute records intact. Refunded or lost-dispute licences do not regain access. Closest equivalent Pro-level capability is the recommended mapping default, without Scale multi-shop/seat capacity

(Q28); existing results/purchases are not silently converted or billed. K39 does not delete active legacy lifetime data.

- **Estimated UK net per monthly standard payment:** £30.08 / £61.13 / £99.94 / £154.28 for Starter/Growth/Pro/Scale, using research assumptions after VAT and Stripe fees. Estimates are not quotes or guaranteed margins.
- **UK rules from 1 Jan 2027:** pre-contract information, trial/renewal reminders, easy online cancellation and cooling-off handling must be implemented on the confirmed timetable. Legal review confirms trader responsibilities and final regulations.

12.5A Easy cancellation flow

K43 and K50, approved 6 November 2026. This sets how cancellation is offered and worded. It does not change K38 (14-day trial, card collected up front, automatic charge on day 15 unless cancelled) or K39 (data wiped when access ends). K51 adds that cancelling also closes the account.

Canonical public wording

- Sticky banner — **approved by Akthar, 6 November 2026 at 00:34 Europe/Madrid, word for word:** “14 days free. Cancel before day 14 and pay nothing. From £39/mo” (supersedes the 00:31 wording, now history)
- Primary button, everywhere (K46): **Start 14-day free trial**. Do not use “Start trial” or “Start free trial” as a competing or mixed label (15.4).
- Pricing card (K43): “14 days free, then £[price] a month including VAT. You won’t be charged until [date]. Cancel any time before then in one click.”
- Checkout, visible before the card is submitted (K43, K50, K52).
- Chosen Starter or Growth (required lead, word for word with the names and amounts filled in): “You’ll try Pro free for 14 days. Unless you cancel, your [Growth] plan starts on [date] at £[amount] including VAT.” Then the card and cancel facts: “We’ll ask for a card now so that plan can continue after the trial if you keep it. You pay nothing today. The charge is for your [monthly or annual] [Growth] plan — not the Pro price. Cancel any time before [date] in Plan & billing — it takes one click. We’ll email you a reminder before you’re charged.”
- Chosen Pro: “Your 14-day free trial of Pro starts today. We’ll ask for a card now so your Pro plan can continue after the trial if you keep it. You pay nothing today. Unless you cancel, we will automatically charge £[amount] including VAT on [date] for your [monthly or annual] Pro plan. Cancel any time before [date] in Plan & billing — it takes one click. We’ll email you a reminder before you’re charged.”
- Chosen Scale: the same shape as the Pro sentence, naming Scale and Scale’s price, not Pro.
- Plan & billing, during the trial: “Your trial ends on [date]. You won’t be charged if you cancel before then.” It also shows the chosen plan, the trial entitlement, the first charge amount and, for Starter or Growth, Keep Pro (12.5B).
- Dates and amounts on Checkout, the trial confirmation email, Plan & billing and the reminder use the account time zone and name it.

Who can cancel. Only the account holder (owner role) can cancel a trial or subscription. Member seats cannot cancel and cannot change billing.

Route (K50). The owner cancels from Plan & billing using a clearly labelled **Cancel trial** control during a trial or **Cancel subscription** control when paid. It is visible without hunting. This is the only customer-facing cancellation route.

Not offered. Do not offer cancellation by email, phone or support ticket. Help, FAQ, Refunds & cancellation, Contact and other support pages must not tell the customer to email to cancel. No checkout, banner, in-app or email copy may say that writing in or replying is a way to cancel.

Automated outbound emails that stay. The trial confirmation, the pre-trial-end reminder and the cancellation confirmation remain. They are system emails the product sends, and they are needed for clear notice (including the UK subscription rules from 1 January 2027). They do not create cancellation requests for Akthar to process. The reminder's cancel link opens Plan & billing so the owner can cancel in-platform.

Stripe. Stripe remains the billing engine. Cards, invoices and payment updates can still be managed from Plan & billing. The labelled cancel action the customer uses is in Plan & billing, so this 12.5A confirmation, export prompt and outbound confirmation email still run.

No retention maze. There is one confirmation screen. No multi-step questionnaire, no phone-only cancel, and no extra pages whose purpose is to hide Confirm. A retention offer is not shown at launch (approved). If a later approval adds one, it is a single skippable offer that does not delay or cover **Confirm cancel**, and **Cancel anyway** is as easy as keeping the plan.

Confirmation screen, before the customer confirms.

- Trial: "You will not be charged. You keep access until [exact date and time]. Your account will be closed and your data will be permanently deleted on [that same date and time]. Download your data before then. This cannot be undone."
- Paid: "Your subscription will not renew. You keep access until [exact date and time]. Your account will be closed and your data will be permanently deleted on [that same date and time]. Download your data before then. This cannot be undone."
- **Download my data** is shown prominently.
- Two actions only: **Confirm cancel** and **Go back**. Go back is the safe default.

After confirm. Show an in-app confirmation and send an email on a durable medium repeating the access-end date, that the account will be closed, the deletion date, that there is no charge (trial) or no renewal (paid), and the export link.

Reminder. Send before trial end. Recommended default remains 3 days before, configurable. The subject makes the purpose obvious, for example "Reminder: your [plan] trial ends on [date] — you'll be charged £[amount] unless you cancel". The body states the chosen plan, amount, exact charge date and a link that opens Plan & billing so the owner can cancel in-platform, plus the K52 facts in 12.5B. That information is more prominent than any marketing in the same email. The reminder must not tell the customer to reply or to email in order to cancel. Delivery failure alerts support but does not silently change the disclosed charge.

Access after cancel (approved). A cancelled trial keeps access and export until the original trial end; then the account is closed and the data is wiped (K51, K39). A cancelled paid plan keeps access and export until the paid-period end; then the account is closed and the data is wiped. An immediate-wipe mode must not be enabled; it would contradict the approved dates.

Undo. Undo before the disclosed end may resume the same trial or paid period only if Stripe still shows it active and no new trial is created.

12.5B Reverse trial (K52)

Approved by Akthar Uddin, 6 November 2026 at 01:05 Europe/Madrid, in his words: “Approve the Pro trial for Starter, Growth and Pro with your default rules.” This sets trial entitlement separately from the chosen/subscribed plan. It does not change K38 (14 days free, card collected up front, automatic charge on day 15 unless cancelled), K43’s public banner, or K50/K51 (in-platform owner-only cancel that also closes the account). It does not change K39: a wipe happens only when subscription access ends, never because a trial converted or a feature was locked.

Entitlement mapping. Store two values, server-side; the UI must not invent them from the browser.

- `chosen_plan` (the subscribed or scheduled plan): Starter, Growth, Pro or Scale — what the customer picked at Checkout, and what day 15 will charge unless they later change it.
- `chosen_interval`: monthly or annual.
- `trial_entitlement`: **Pro** when `chosen_plan` is Starter, Growth or Pro; **Scale** when `chosen_plan` is Scale.

During `trialing`, feature gates, history depth, seats, platforms, scenarios, PDF and the unique-order limit `L` follow `trial_entitlement`. After a successful conversion they follow `chosen_plan`. Keep Pro changes `chosen_plan` to Pro and leaves `trial_entitlement` as Pro.

Rule 1 — what they use during the 14 days.

- A Starter, Growth or Pro trial receives **full Pro features** and **Pro’s 5,000 unique-order limit**.
- A Scale trial receives **Scale** (Scale features and Scale’s 15,000 unique-order limit). This is unchanged.
- Sample data never consumes allowance.

Rule 2 — what they pay. Day 15 charges the **chosen plan’s** published monthly or annual price, including VAT — not the Pro price — unless the chosen plan is already Pro or the owner used Keep Pro. Checkout, the trial confirmation email, Plan & billing and the reminder must all show that chosen-plan amount and date.

Checkout must say this clearly before the card is submitted. Required lead when the chosen plan is Starter or Growth:

> You’ll try Pro free for 14 days. Unless you cancel, your [Growth] plan starts on [date] at £[amount] including VAT.

The card-collection, “pay nothing today”, “not the Pro price”, in-platform cancel and reminder sentences in 12.5A follow that lead. A chosen Pro or Scale trial names that plan and its price, and does not say the customer will try a different plan.

Rule 3 — in-app trial banner, label and Keep Pro. While the account is trialling, a persistent in-app banner or badge (not the public signed-out sticky banner) states that they are using the trial entitlement.

- Chosen Starter or Growth, monthly: “You’re trying Pro free until [date]. Your [Growth] plan starts on [date] at £[amount]/mo. Keep Pro for £129/mo.”
- Chosen Starter or Growth, annual: the same sentence with the annual chosen-plan amount and “Keep Pro for £1,290 a year.” Do not show a monthly Keep Pro price on an annual checkout.
- The **Keep Pro** control is a secondary action. It is an upgrade of `chosen_plan` to Pro that keeps the same trial start and end dates and does not create a new trial. There is no charge today. Day 15 then charges the Pro price for the same interval (£129/mo or £1,290 a year). After Keep Pro the banner becomes the chosen-Pro line below, and Plan & billing, Checkout records and the reminder show the Pro amount.
- Chosen Pro: “You’re on your Pro free trial until [date]”. No Keep Pro action.
- Chosen Scale: “You’re on your Scale free trial until [date]”. No Keep Pro action.
- While `trial_entitlement` is Pro, a **Pro** label appears in the header or account area and in Plan & billing. While it is Scale, a **Scale** label appears there instead.

Keep Pro is not a cancellation retention offer (K43). It lives on the trial banner, Plan & billing and the reminder, not on the cancel confirmation screen. Cancel remains as easy as Keep Pro (K50). Only the owner can use Keep Pro.

Rule 4 — conversion locks extras; it does not delete them. When a Starter or Growth trial converts at the chosen-plan price, features, history depth, seats, platforms, scenarios, PDF and any other Pro capability beyond the chosen plan become **locked, not deleted**. Locked items show a clear upgrade prompt that names a plan which restores them. Upgrading restores access immediately; the customer does not re-upload or rebuild that data.

This is not a K39 wipe and not a Start fresh. K39 still runs only when access ends (cancel, final payment failure, immediate first-payment refund or lost dispute). Trial conversion and paid downgrade (Q27) hide or lock out-of-window or out-of-plan items; they do not delete product data. The 12.4 history rule still applies: results never show data older than the active entitlement’s history window, and data outside that window is kept and restored on upgrade.

Examples after a Pro-entitlement trial converts to Starter: overheads, per-channel ROAS, own FX, full per-order tax, saved scenarios, PDF, the second seat, platforms beyond one, and history older than 3 months lock. After conversion to Growth: platforms beyond two, history older than 12 months, the second seat, and saved scenarios beyond two lock; Growth’s included features stay available.

Extra seats stay recorded but those members cannot sign in until an upgrade restores the seat. Extra connected platforms stay recorded but cannot be used for new work until restored. Existing results that remain inside the chosen plan’s history window stay visible.

If the chosen plan is Pro or Scale, conversion does not lock Pro features.

Rule 5 — order-limit overrun after conversion. If unique orders counted during the trial exceed the chosen plan's monthly limit, existing results stay visible and new uploads that would add unique orders are blocked until the owner upgrades to a plan whose limit covers current usage, or until the next billing month (the next monthly usage reset in 12.4). The usual hard-limit message, overage figures, Upgrade action and "existing results are unchanged" wording apply. Conversion does not reset u (12.4). Duplicate re-uploads that add no new unique orders remain allowed.

During the trial, L is the trial-entitlement limit (5,000 or 15,000), and the 80% warning uses that limit.

Rule 6 — reminder email. The pre-trial-end reminder (recommended default remains 3 days before, configurable) must include, on a durable medium:

- the chosen plan, the exact charge amount and the exact charge date;
- for a Starter or Growth chosen plan, a plain list of the Pro features that will lock if they do not Keep Pro or upgrade, written without jargon;
- an order-limit overrun warning when current u already exceeds the chosen plan's limit, stating the current usage, the chosen plan's limit, and that new uploads will be blocked after conversion until an upgrade or the next billing month;
- a one-click **Keep Pro** upgrade, for Starter or Growth, that after sign-in performs the same Keep Pro action as the in-app control (one owner confirmation at most);
- a link that opens Plan & billing so the owner can cancel in-platform (K50).

The reminder must not invite the customer to email or reply in order to cancel. Keep Pro must not hide or delay that cancel link. For a chosen Pro or Scale trial, omit Keep Pro and omit a "features you will lose" list; still state the amount, date and cancel link.

Public Pricing copy. The comparison table and pricing cards may note "Every trial includes Pro features" (approved). They must not imply that a Scale trial is only Pro. The public sticky banner stays: "14 days free. Cancel before day 14 and pay nothing. From £39/mo".

UK subscription rules. Disclosures must stay clear and not misleading: trying Pro is not the same as being charged for Pro, and keeping Pro features after day 15 requires choosing Pro, using Keep Pro, or already having chosen Pro. Card collection, the exact chosen-plan amount and date, the reminder and easy in-platform cancellation remain required (K43, K50; UK rules from 1 January 2027).

12.6 Data deletion and privacy at subscription end

K39 replaces the 12-month lapsed-retention rule, its 60/30-day warnings and restore-on-resubscription. Trial conversion and feature lock under K52 are not access end and must not trigger this wipe.

- **Scope of "all data wiped":** all uploaded/cleaned orders and raw files, product costs, advertising/overhead/return data, FX/tax/target settings, saved datasets/views, calculations, results, Health Scores, reports/PDFs, calculators/scenarios, samples attached to the account,

shops, team/member links and other user preferences or product content. Deletion includes search indexes, caches, exports and derived data.

- **What may remain after access end:** Stripe customer/subscription state held by Stripe, legally required invoices/payment/refund/dispute/tax records and a privacy-safe deletion tombstone/audit event. These are disclosed separately in Privacy/DPA and are not old product results. Stripe, Link, SES and Google retain data only under their disclosed roles/terms. After the owner cancels, the login itself is removed at access end (K51). There is no leftover account for a later resubscription.
- **Paid cancellation:** access and Download my data continue to paid-period end. Before confirming, the screen states “Your subscription ends and your account will be closed on [exact date/time]. All your product data will be permanently deleted on that date. Download your data before then. This cannot be undone.” The confirmation email repeats the dates and export link. At period end, wipe all in-scope data and remove the login (K51).
- **Trial cancellation:** no charge, through 12.5A. Access/export continue to the original trial end, then wipe all in-scope data and remove the login (K51). Cancellation screen/email show that exact account-closure and deletion date.
- **Final failed payment / immediate first-payment refund / lost dispute:** access ends when the authoritative state says it ends; wipe immediately then. Retry/refund/dispute disclosures explain this before the event where possible, and a deletion confirmation is sent. No 12-month export-only period exists.
- **Later signup:** after cancel-and-close, the previous login does not work. The person may create a new account; no old orders, results, costs, shops, team configuration or settings are restored.
- **Backup deletion:** live data is wiped at the stated access end; all backups/replicas age out within 7 days. Configure backup retention to 7 days or less. Restore procedures re-apply deletion tombstones before access so wiped data never returns.
- **Warnings/jobs:** no 60/30-day lapsed warnings. Only the applicable trial reminder, cancellation confirmation, final-failure/deletion notices and deletion-completion confirmation are sent. Scheduled jobs are idempotent and catch up missed deletion without extending access.
- **Privacy:** Privacy policy, retention table, DPA/subprocessor list, Refunds & cancellation and Help must state that in-platform cancel also closes the account, the exact access-end and deletion warning, that a later signup is a new account, backup removal within 7 days, and exceptions for legally required payment records. They list a GDPR / privacy contact address only; they do not offer email cancellation or email account closure. Remove all 12-month retention/restoration promises and the former email-closure journey.
- **Account closure:** no Delete account UI and no email-closure workflow (K51). The owner closes the account by cancelling in Plan & billing. At the disclosed access end the login is removed with the data.
- **Location:** app/database/backups remain DigitalOcean London. Account/transactional emails use Amazon SES Stockholm (`eu-north-1`) and are processed in the EU (Stockholm), approved K36. Account emails are controller data and all processors appear in the DPA/subprocessor list.
- **Security:** encryption in transit/at rest, least-privilege keys, signed webhooks, replay protection, rate limiting, secure cookies, CSRF protection, file validation and regular

deletion/restore testing remain required.

12.7 Saved datasets, matching and deduplication

- Each shop has append-only canonical cleaned order rows and named saved datasets that are views over those rows, not duplicate copies. Platform entitlements apply per shop; shop count and team details follow OD5.
- Canonical keys remain: Shopify order ID + line position + SKU/variant; Etsy order ID + transaction ID; Amazon/Shopify Payments full-row hash plus occurrence for legitimate identical rows. TikTok uses order ID + line/SKU/row identifier where present, otherwise documented full-row hash plus occurrence. Same order across different platforms remains distinct.
- Re-uploads update changed rows and skip identical rows. A blocked over-limit upload is atomic: no inserted, updated or deleted rows and no saved-dataset change.
- CSV exports contain cleaned rows and user-entered costs, not original files or buyer personal data. Export remains available through the disclosed access end; after deletion there is no lapsed dataset to export.
- Monthly usage uses canonical order identity, not file rows, line items or upload count. Refund-only rows link to their original order and do not create another order solely because of a refund.

12.8 Tax

The v17.1 rules remain: seller tax settings and actual export tax take priority; no invented US sales-tax rates; UK/EU/Canada/Australia rate sources in 16.3 with valid dates; marketplace-collected tax excluded from seller revenue where documented; standard/reduced/zero rates never guessed when the export supplies actual amounts; VAT on fees handled according to actual invoice/tax data; all estimates labelled and not tax advice. Starter has the simple UK/UK VAT toggle, Growth and above the full per-order breakdown. TikTok VAT is estimated from VAT-inclusive prices and seller settings and clearly labelled. Accountant review remains a launch blocker.

12.9 Margins 365 VAT and Stripe responsibilities

Margins 365 sells VAT-inclusive SaaS subscriptions through Stripe Managed Payments/Link. The accountant must confirm VAT registration thresholds, place-of-supply treatment, invoicing, annual discounts, deemed-supplier wording and US/international implications. Public copy must not claim “Stripe handles all your tax” or imply that Akthar's own registration/reporting obligations disappear. Stripe's approval and eligible product configuration remain launch blockers.

12.10 Subscription state and Stripe events

- **Events:** subscription created/updated/deleted; trial start/end and conversion where supplied; Checkout completed and asynchronous success/failure; invoice paid/payment failed; charge refunded; refund updated/failed; dispute created/updated/closed; redacted charge/subscription/customer events as applicable. Verify signatures, process each event ID once and read latest provider state before deciding.

- **State mapping:** current `trialing` grants `trial_entitlement` access (Pro when the chosen plan is Starter, Growth or Pro; Scale when the chosen plan is Scale) without a successful charge; paid active invoice + current subscription grants the chosen/subscribed plan's paid entitlement, with extras beyond that plan locked rather than deleted after a reverse trial (K52); trial cancellation prevents conversion and schedules deletion at disclosed trial end; paid cancellation schedules deletion at paid-period end; final nonpayment, first-payment full refund or lost dispute ends access and triggers deletion immediately; failed refund restores latest valid state; unknown values preserve last known state and alert.
- **Proration and plan limits:** entitlement/order limit change only after confirmed provider state. Preserve current-period usage on upgrade and on trial conversion (conversion does not reset `u`). Keep Pro during a trial updates the chosen plan and the scheduled day-15 price without creating a new trial or charging today. Replayed/late events cannot revive a cancelled trial, charge it, downgrade newer state, restore deleted data or revive an old subscription.
- **Deletion transaction:** entitlement end creates an idempotent deletion job and tombstone keyed by account/deletion date. Live wipe covers every 12.6 store; backup expiry is monitored to 7 days. Failure alerts support and retry without granting extra access or delaying the disclosed deletion silently.
- **Reconciliation:** daily compare Stripe trial/subscription/refund/dispute state with entitlement, next charge/renewal, plan, cancellation and deletion-due state. Alert on mismatches without secrets.
- **Customer portal / billing tools:** authenticated return URL from Plan & billing for cards, invoices and payment updates; no direct client entitlement editing; accessible phone and tablet journey. The customer-facing cancel action is Plan & billing (12.5A, K50), not email. Cancellation states exact access end, permanent deletion date and export link.
- **Test mode:** all plans/intervals; VAT amounts; 14-day trial card setup; reminder; no-charge cancel through 12.5A; day-15 monthly/annual conversion; one-trial limits; published-price-only charges (no founding discount); duplicate Checkout; proration; downgrade; paid/trial cancellation; retries/recovery/final failure; first-payment refund; later no-partial-refund; disputes; failed refund; replay/late events; annual monthly reset; live deletion; backup ageing/restore tombstones; a later signup after close starts empty and must pass before live.
- **Live proof:** low-risk trial cancellation proves no charge and dated deletion; trial conversion proves exact day-15 charge and reminder; first-payment refund/deletion follows the approved launch procedure. Verify invoices, portal, entitlement, later signup after close and emails; record actual fees.

12.11 Subscription acceptance tests

ID	Scenario	Required result
S1	Monthly Growth paid	£79 inc VAT; active; period/renewal shown; 2,000 limit
S2	Annual Pro paid	£1,290 inc VAT charged once; 12 months access; monthly usage boundaries

ID	Scenario	Required result
S3	Any paying account, including conversions	Charged the published price; no founding or introductory discount is applied
S4	Starter→Growth mid-period	Immediate entitlement after proration; existing usage preserved
S5	Scale→Starter	Scheduled change; 500 limit/3-month display at next period; no silent downgrade deletion
S6	Cancel paid plan in portal	`cancel_at_period_end`; exact end/deletion date, access/export until then, no next renewal
S7	Failed card	Retry state/access/banner/update-card/export warning for up to 14 days
S8	Card recovered	Active resumes without duplicate subscription or data loss
S9	Final nonpayment	Access ends; all product data wiped immediately; no 12-month retention
S10	Converted first-payment refund requested day 14	Existing rule gives full refund once; immediate end/deletion; legal may clarify post-trial applicability before launch
S11	Refund requested day 15	No automatic refund; cancellation remains; statutory rights unaffected
S12	Sign up after a cancelled account has been closed	Previous login does not work; a new account starts empty; no old datasets/results/settings restored
S13	Trial/paid cancellation message	Exact deletion date and Download my data in confirmation UI and email; no 60/30-day lapsed warnings
S14	Start fresh	Subscription/account and permitted billing records retained; product data gone
S15	Replayed/late/ unknown webhook	Idempotent; latest state wins; cannot charge cancelled trial or restore deleted data
S16	Legacy paid lifetime	Permanent access remains; no subscription charge; refunded/lost-dispute

ID	Scenario	Required result
		legacy licence has no access
S17	Starter/Growth/Pro/ Scale monthly trial	Card required; no initial charge; Starter/Growth/Pro receive Pro features and the 5,000-order limit; Scale receives Scale; 14-day end
S18	Each annual tier trial	No initial charge; correct annual chosen-plan post-trial amount/date disclosed and charged once on day 15
S19	Trial cancelled before end	No charge now or later; access/export continue to original trial end; then the account is closed and data is wiped
S20	Trial reminder	Sent at configured lead (default 3 days), with chosen-plan amount/date, in-platform cancel link and the K52 facts in 12.5B; failure alerts support
S21	Second trial same account	Denied; paid option offered; no second trial entitlement
S22	Second trial same card where supported	Recommended default denies repeat without retaining/exposing sensitive card data
S23	Pricing and Checkout disclosure	The approved banner is present and unchanged. Before card submission, Checkout states that a card is collected, that a Starter or Growth trial tries Pro, the exact chosen-plan post-trial amount and charge date, and that cancellation is in-platform from Plan & billing. The retired live lead “Card required. Cancel before day 14 to pay nothing.” is absent
S24	Trial conversion first payment	Records refund eligibility date only on successful charge; no founding qualification exists
S25	Late cancellation webhook	Latest provider state wins; a timely cancelled trial is never charged
S26	Trial order limit	The trial-entitlement hard unique-order cap (5,000 for Starter/Growth/Pro, 15,000 for Scale) and atomic rejection apply
S27	Primary CTA label	Every signed-out marketing primary is exactly “Start 14-day free trial”; “Start trial” and “Start free trial” do not appear as mixed labels; hierarchy matches 15.4
S28	Easy cancel from	Only the owner can reach Confirm cancel, in one confirmation step with no retention maze; member seats cannot cancel; trial produces no charge;

ID	Scenario	Required result
	Plan & billing	paid produces no renewal
S29	Cancel confirmation content	Screen and email state access-end date, deletion date, no-charge or no-renewal, and Download my data
S30	Trial reminder content	Sent at the configured lead (default 3 days) with chosen plan, amount, exact charge date, in-platform cancel link and, for Starter or Growth, the Pro-features list, overrun warning when applicable, and Keep Pro; purpose is obvious in the subject
S31	Homepage onboarding	“What files do I need?” and “How to use this platform” are present on Home, match 17.5 (including the K53 TikTok coming-soon line and no TikTok export instructions), and open with a tap on phone and iPad
S32	Comparison table help	Shops and Seats explanations in 3/K47 are available without hover and without a “?” control; Support target row is absent; the 3.1 matrix is complete; table meets 15.3 on phone and iPad
S33	Layout and scaling matrix	Screenshot checks in 15.5 pass at every listed viewport; type minima, 44 px targets, content-width rules, hero scaling and no zoomed-out or one-sided-empty layout
S34	Homepage Product section	Copy matches 17.6; outcome headline; one result line per card; jargon in tap tooltips; “Paid plans unlock the full score breakdown” is absent; one labelled sample proof number
S35	No email cancellation	Help, FAQ, Refunds & cancellation, Contact, Checkout and support pages do not offer email cancellation. Reminder and confirmation emails remain outbound only; the reminder’s cancel link opens Plan & billing
S36	Starter or Growth monthly trial	Full Pro features and Pro’s 5,000-order limit apply; `trial_entitlement` is Pro and is stored separately from `chosen_plan`; no charge today
S37	Pro monthly trial	Pro features and the 5,000-order limit; banner reads “You’re on your Pro free trial until [date]”; no Keep Pro action
S38	Scale monthly trial	Scale features and the 15,000-order limit, not Pro-only; banner reads “You’re on your Scale free trial until [date]”
S39	Day-15 conversion of a Growth trial	Charges the Growth price (£79 monthly or £790 annual), not £129 / £1,290, unless Keep Pro was used

ID	Scenario	Required result
S40	Checkout disclosure for a Growth trial	Required lead “You’ll try Pro free for 14 days. Unless you cancel, your Growth plan starts on [date] at £[amount] including VAT.” is visible before the card, with card collection, “not the Pro price”, and in-platform cancel
S41	In-app trial banner and Pro label	Starter/Growth banner matches 12.5B with interval-correct prices; Keep Pro is secondary; a Pro label shows in the header/account area and Plan & billing
S42	Keep Pro during a Growth trial	`chosen_plan` becomes Pro; trial end date is unchanged; no new trial; no charge today; day 15 charges Pro; banner switches to the chosen-Pro line
S43	Conversion lock	Features, history outside the chosen window, extra seats, extra platforms and extra scenarios lock rather than delete; each locked item shows an upgrade prompt; an upgrade restores them immediately; K39 does not run
S44	Trial usage above the chosen plan’s limit	After conversion, existing results stay visible; new unique-order uploads are blocked until upgrade or the next monthly usage reset; `U` is not reset by conversion (see L17)
S45	Reminder for a Starter or Growth trial	Lists Pro features that will lock, any overrun warning, charge amount and date, Keep Pro, and an in-platform cancel link to Plan & billing; no email-cancel invitation
S46	Public Pricing copy	“Every trial includes Pro features” may appear; it does not describe a Scale trial as only Pro; the approved K43 public banner is unchanged
S47	TikTok public-copy restore gate (K53)	Until the TikTok reader passes its 9.1 / 16.1 acceptance tests, Home, Pricing, comparison, Help, Features and Upload show “TikTok Shop UK (Beta): Excel import coming soon”, give no TikTok export instructions, offer no working TikTok upload option or chip, and do not count TikTok toward usable platform slots. The previous live Beta copy and 1 of 4 / 2 of 4 / All 4 usable counts may return only after those reader tests pass
S48	Homepage hero sample card (K54)	**Retired by K55.** The K54 “perfectly centred with equal spacing on all sides” rule is withdrawn. Hero layout follows the pre-K54 / K48 scaling rules in 15.5
S49	Homepage Product section (K54)	Whole section from Product intro text to the sample result box is centred; each of the six titles has an (i) icon one space after the title and no “?”; K49 tooltips still open with a tap
S50	Homepage Get	The two 17.5 questions sit directly under the Tools section; the whole Get

ID	Scenario	Required result
	Started (K54)	Started area is centred
S51	Homepage differentiation line (K54, amended by K56)	Until the K53 restore gate (S47) passes, the line near the top is exactly “Built for single or multi-platform sellers (Shopify, Amazon, Etsy, TikTok coming soon).” After S47 passes, it is exactly “Built for single or multi-platform sellers (Shopify, Amazon, Etsy, Tik-Tok).”
S52	Sample report opening and Open Sample Shop (K54, amended by K55)	Opening section is centred; first dashboard layout is unchanged; a centred “Open Sample Shop” button in #34726B sits at the bottom of that section; the opening-section in-page “Start 14-day free trial” button is replaced by a second “Open Sample Shop”; header primary remains “Start 14-day free trial”
S53	Most Popular on Pro (K54)	Every plan tile, monthly and annual, shows Most Popular on Pro not Growth; the Pricing header CTA scrolls to and focuses Pro
S54	Expanded comparison (K54, amended by K55)	Public matrix matches 3.1, grouped by category, with no invented features, no Support target row and no Email support row
S55	Shops and Seats help (K54, amended by K55)	No “?” and no (i) on those labels; K47 explanations remain as plain sub-text under the label and in the FAQ
S56	Pricing FAQ (K54 and K55)	The questions and answers in 3.2 are present and match that copy, including the K55 seats, shops and support-reducing questions
S57	Sample card and ranked leaks on mobile (K54, amended by K55)	After the remaining centring (not the retired hero equal-spacing rule), both stay readable on phone and iPad at the K48 breakpoints without pinch-zoom or clipping
S58	Suggest a feature default (Q33)	Signed-in form with one short text field; submission stored for admin review or export; no public email; no reply promised; not offered as email cancellation
S59	Homepage hero after K55	Hero follows the K48 / 15.5 scaling rules; the K54 equal-spacing-on-all-sides requirement is not applied
S60	Product headline (K55)	The Product section headline is exactly “See where your profit is leaking.” with “in pounds” removed

ID	Scenario	Required result
S61	Two Open Sample Shop buttons (K55)	Sample report opening section and the bottom of the first dashboard each have “Open Sample Shop”; the header primary remains “Start 14-day free trial”
S62	Command centre above Most Popular (K55)	Every Pro plan tile, monthly and annual, shows the badge “Command centre” above “Most popular”
S63	No Email support comparison row (K55)	The public full comparison has no row labelled “Email support” (and still no Support target row)
S64	New K55 FAQ answers	“What are seats?”, “What are shops?”, “What happens if I hit my order limit?”, “Is my data safe, and where is it stored?”, “Do you connect to my store?”, “Can I change plan?” and “Does the price include VAT?” match the 3.2 copy
S65	Forgot password? link (K57)	The sign-in dialog shows “Forgot password?” under the password field
S66	Reset request and neutral message (K57)	The Enter your email form, after submit, always shows “If an account exists, we’ve sent a reset link,” whether the address is unknown, Google-only or has a password; no account enumeration
S67	Reset email via SES (K57)	An email-and-password account receives the 5.1 reset email through SES eu-north-1, with that subject, body, Reset password button, 60-minute single-use expiry note and ignore-if-you-didn’t-ask line; the email is not a cancel route
S68	Reset page and token rules (K57)	The page accepts a new password that meets the section 5 rules; the link expires after 60 minutes (default), is single use, and a new request invalidates older unused links
S69	Expired or used link (K57)	An expired or already-used link shows a clear error and a Send a new link option
S70	Google-only default (Q34)	Same on-screen neutral message; the recommended default email tells them to use Continue with Google and does not include a set-password link
S71	After reset (K57)	All other sessions are signed out; a confirmation email with subject “Your

ID	Scenario	Required result
		password was changed” is sent
S72	Reset on phone and iPad, not a cancel route (K57)	The request and reset screens meet K48 type minima and 44 px targets; reset pages and emails do not offer email cancellation (K50)
S73	User-facing product name (K58)	Every interface, PDF, email, legal page and section 22 label renders `PRODUCT_NAME`, default “Margins 365”. Customer-facing copy does not present MarginOS or MarginSeam as the live product name
S74	Target versus live domain (K58)	Until cutover, public hosting and SES identities may still be the existing marginos.online host and current SES configuration; the target domain is margins365.com. The new domain is not treated as already configured, and no support or privacy mailbox is invented
S75	Cutover verification (K58)	Before public traffic moves to margins365.com, the 20.5 checks pass: brand strings, Google OAuth allowed origins/redirects, SES verification/DKIM/DMARC/MAIL FROM, Stripe and public callback URLs, links and metadata, and test sign-in, checkout return and mail delivery

12.12 Data-deletion acceptance tests

ID	Scenario	Required result
D1	Paid cancellation before period end	Dated warning/export in UI/email; data available until period end; no early wipe
D2	Trial cancellation before end	No charge; dated warning/export; access until original trial end; then wipe and account closed
D3	Paid/trial deletion due	Every category in 12.6 is absent from live app, exports, indexes, caches and derived stores
D4	Final failed payment	Access ends and live wipe runs; prior retry messages offered export/warning
D5	Immediate first-payment refund	Access ends and live wipe runs; deletion confirmation sent
D6	New signup after wipe and close	Previous login does not work; a new account is empty; no historical restore

ID	Scenario	Required result
D7	Backup age 7 days after wipe	Deleted user content absent from every backup/replica; completion audited
D8	Restore after wipe	Tombstone reapplied before access; deleted data cannot reappear
D9	Missed deletion job	Catch-up is idempotent, alerts support, does not silently extend access or duplicate notices
D10	Cancel also closes the account (K51)	In-platform cancel schedules account closure; at access end login and product data are gone; no email-closure workflow; privacy policy lists a GDPR contact only
D11	Active legacy lifetime	K39 does not wipe active legacy data; Start fresh still works. A legacy lifetime account has no subscription to cancel; there is no email-closure workflow (K51). Any statutory erasure request goes through the privacy-policy contact only
D12	Privacy/Help/ Refund pages	No 12-month lapsed-retention/restore claim; deletion scope/date/backups/exceptions match actual behaviour
D13	Reverse-trial conversion (K52)	Converting to the chosen plan does not wipe data; locked extras remain stored and are restored on upgrade; K39 does not run

13. Risks and assumptions

The risks in section 11 apply. Commercial assumptions are that sellers will pay top-end monthly prices after a card-required trial for ranked CSV/XLSX diagnosis, that samples plus a 14-day trial demonstrate value without a permanent free tier, and that hard order limits are acceptable while entitlement remains active. Technical assumptions are that real files match the documented mappings, Stripe supports the required Managed Payments subscription flow, Google brand verification succeeds, and the hosting/backup configuration can honour the deletion promises.

Risks carried from v17.1: column drift, translated headers, decimal/date formats, missing fee/tax/cost data, large-file memory limits on phones, in-app-browser Google restrictions, platform fee changes, currency-rate gaps, email delivery/spam, webhook ordering and disaster recovery. New subscription risks are entitlement drift, duplicate billing, unwanted trial conversion or repeat-trial abuse, annual-period usage errors, irreversible deletion at access end, accidental deletion at downgrade, unclear seat/multi-shop enforcement and unvalidated TikTok Beta calculations. Exact deletion dates, export prompts, tombstones and restore tests mitigate but do not remove these risks. Each has acceptance tests or an explicit owner/open question; none is solved by copy alone.

14. Open questions log

All unresolved IDs Q10–Q34 and OD4–OD8 are consolidated in the front table, **“Not yet decided — build with the recommended default behind config where possible.”** That table is the single source for their implementation defaults. Q26 is withdrawn under K42. OD9 / Q31 is resolved by K51. OD3 is resolved by K58 for the user-facing name **Margins 365** and target domain **margins365.com** (trademark clearance is not implied and remains a legal launch check; live infrastructure stays on marginos.online / existing SES identities until cutover). Q32 is the flagged platform-count display while TikTok is coming soon (K53). Q33 is the flagged Suggest a feature form (K54). Q34 is the flagged password-reset operational defaults (K57). None of the remaining items is an approval; none blocks core build. Any change to an approved rule requires a new K-decision.

15. Devices, browsers and UX acceptance

15.1 Supported experiences

- Mobile, tablet and desktop: latest two major Safari, Chrome, Edge and Firefox versions, latest Samsung Internet, and in-app browsers with a clear route to open a supported browser if Google blocks sign-in.
- Responsive at 320 px upward, portrait and landscape, no sideways scrolling for core tasks, touch targets at least 44 × 44 px, keyboard operation, visible focus, 200% zoom and WCAG 2.2 AA.
- Real public pages have normal URLs, page titles, back-button behaviour and deep links. They do not render the signed-in app shell or account controls.

15.2 Core journeys

1. Visitor reaches Home → Sample report → Pricing → Sign in, understands VAT-inclusive plan, order limit, 14-day trial, post-trial price, charge date and cancellation route, and sees no false live account controls.
2. Sign-in presents Google first and email second, with accessible errors and fallback outside in-app browsers. This page’s primary actions are the sign-in buttons; any trial path is secondary (15.4). Forgot password? sits under the password field and follows 5.1.
3. Sample shop → choose plan → add shop → upload → add costs → review import → first results; sample data clears only under section 17 rules.
4. Dashboard leads with ranked fixes/top three £ impacts, then Health Score, products and detail. Mobile order preserves this hierarchy.
5. At 80% the notice names the next plan. At the hard limit the exact overage, Upgrade and unchanged-results message work without losing the blocked file's existing data.
6. Settings, invoices, plan change, update card and owner-only Cancel trial / Cancel subscription work through 12.5A on phone, tablet and desktop. Exact trial/paid access end and data-deletion date are confirmed with an export prompt; no old data returns after resubscription. No page offers email cancellation.
7. PDF is beside results on Growth/Pro/Scale and downloads an always-light branded report. No

header PDF icon exists.

8. Data & privacy offers CSV export and Start fresh, never Delete account. The owner closes the account by cancelling in Plan & billing (K51).
9. Light-only UI has no dark toggle or dark theme tokens in the built app; email dark-client readability and light PDF remain tested.
10. Performance and device matrix from v17.1 remain: reference results usable within 3 seconds on mid-range phone/4G, INP ≤200 ms, CLS ≤0.1, real iPhone, Android phone, iPad (portrait and landscape) and PC testing before launch.

15.3 Phone and tablet/iPad requirements

K45. These criteria strengthen, and do not weaken, 15.1.

- The public site and the signed-in app must be usable on a mobile phone and on a tablet/iPad in both portrait and landscape, not a desktop page that merely shrinks.
- Required launch checks: recent iPhone portrait, Android phone portrait, iPad portrait, iPad landscape, and desktop. The live pricing comparison reviewed on iPad on 6 November 2026 is a required regression surface.
- **Comparison table.** On a phone, plans may appear as stacked cards. The full comparison remains available as stacked rows or as a table that scrolls horizontally inside the table only (not the whole page), with the Capability column sticky and a visible cue that more columns exist. On iPad portrait, use that pattern if all four plan columns cannot be read without pinch-zooming body text. On iPad landscape, the full comparison is readable without horizontal page-scroll or pinch-zooming body text.
- **Sticky trial banner and site header** never cover the page heading, table headers or primary content. The banner is dismissible; after it is dismissed the page reflows. On short tablet screens the banner text wraps fully rather than overflowing or sitting on top of the table.
- All interactive targets, including banner and header buttons and Shops/Seats help, are at least 44 × 44 px.
- Essential help — Shops, Seats, “What files do I need?” and “How to use this platform” — opens with a tap. Hover-only help is not acceptable.

15.4 Call-to-action hierarchy

K46.

- The primary signed-out marketing label is exactly **Start 14-day free trial**. Do not mix “Start trial”, “Start free trial” and “Start 14-day free trial”.
- Each signed-out marketing screen has one visual primary. Secondary actions use quieter buttons or text links.
- **Home, signed out:** primary Start 14-day free trial. Secondary: Sample report, Compare plans, Sign in. Include 17.5 and 17.6. Do not show Open control room or Choose [plan] as competing primaries.
- **Pricing, signed out:** primary Start 14-day free trial in the header. The sticky banner states the K43 trial terms and has no second button, so banner and header do not both shout. The

header CTA scrolls to the plan cards and focuses Pro (Most popular) (K54). Plan cards use quieter Choose Starter / Growth / Pro / Scale actions that start that plan's trial. Compare plans is not a call-to-action when the comparison is already on the page. Sign in remains secondary.

- **Sample report:** primary Start 14-day free trial remains in the **header** (the marketing chrome used on this page). In the live build that in-page trial button sits in the **opening section** of `src/components/marketing/SampleReportPage.tsx` — the first section, headed "Sample report" / "What a Margins 365 diagnosis looks like" — in a centred row beside "Compare plans", using the `PRIMARY_TRIAL_CTA` label. Replace that opening-section button with **Open Sample Shop**. Keep the K54 centred **Open Sample Shop** button in brand green `#34726B` (section 22) at the bottom of the following "First dashboard" section. Two Open Sample Shop buttons on this page are an approved exception to K46 (K55); Akthar asked for both. The first dashboard layout otherwise stays as it is. Neither Open Sample Shop button replaces the header primary, and they do not appear on other pages as extra primaries. Other secondaries: Compare plans, Sign in.
- **Sign in:** primary actions are Continue with Google and Continue with email. A quieter path into the 14-day trial is allowed for new customers. **Forgot password?** is a quiet link under the password field, not a competing primary (5.1).
- **Checkout:** primary is the Stripe action that starts the trial, with the K43 and K52 Checkout disclosure visible first.
- **Help, Terms, Privacy, Contact, Refunds:** no marketing primary is required; a quiet text link is enough.
- **Signed in, no trial or paid plan yet:** primary Start 14-day free trial, or Choose a plan.
- **Signed in, trial or paid:** product actions such as dashboard or Upload may be primary. Keep Pro is secondary. **Open control room** may be used as the signed-in name of the workspace; it must not appear on signed-out public pages as a competing marketing button.

15.5 Layout and scaling

K48. These criteria apply to the public site and the signed-in app, on desktop and on every other platform. They strengthen, and do not weaken, 15.1 and 15.3. They are product requirements, not CSS instructions.

Minimum rendered type, measured on the live page at the viewport under test:

Role	Phone 375–430	iPad portrait 768–834	iPad landscape 1024–1194	Laptop 1280–1440	Large 1920+
Body, supporting copy, button labels and form labels	≥ 16 px	≥ 16 px	≥ 16 px	≥ 16 px	≥ 16 px
Section heading	≥ 24 px	≥ 28 px	≥ 28 px	≥ 28 px	≥ 28 px
Page or hero headline	≥ 28 px	≥ 32 px	≥ 36 px	≥ 40 px	≥ 40 px

Interactive targets remain at least 44 × 44 px at every width.

The **main content group** is the headline, supporting text, primary actions and the associated visual if present (on Home, the green panel and sample card).

Content width and composition

- Phone 375–430: the group occupies at least 88% of the viewport width. The visual stacks with the copy in the same column and scales to it. Left and right margins differ by no more than 8 px. Hero height fits the stacked content plus normal padding; it is not a full-viewport panel with content only in the middle third.
- iPad portrait 768–834: the group occupies at least 86% of the viewport width. If the hero is two columns, those columns together meet that rule, neither is narrower than 34% of the viewport, and the image scales with the text column. Neither side margin is more than twice the other. Hero height fits the content.
- iPad landscape 1024–1194: the group occupies at least 80% of the viewport width and is centred. Headline, body and buttons meet the type minima without pinch-zoom. The image scales with the text and stays paired with it; it is not a panel locked to the right half with the sample card floating in empty space. No vacant band on one side only is wider than 12% of the viewport. Hero height fits the content; it is not full-viewport height with content only in the middle third.
- Laptop 1280–1440: the group occupies at least 75% of the viewport width (≥ 960 px at 1280, ≥ 1,080 px at 1440) and is centred. Side margins outside the group differ by no more than 24 px. The image scales with the text. Same hero-height rule.
- Large 1920+: the group is centred and at least as wide as at 1440 px. It may grow up to 1,440 px. Left and right margins outside the group are equal. The page must not show a narrow text column with a large empty left margin and a separate visual locked to the right half. Type minima still apply.

Hero image. It scales with the accompanying content as part of the same group. It is never a fixed panel independent of the text.

No zoomed-out page. Each page renders at the device’s actual viewport width. A first-time visitor can read the headline and body and use the primary button without pinch-zooming. The layout is not a wide desktop composition scaled down to fit.

Mandatory pre-release screenshot matrix. Capture every public page (Home, Pricing, Sample report, Sign in, Help, Terms, Privacy, Contact, Refunds and any other public route) and the core signed-in screens (dashboard or control room, upload, Plan & billing, cancel confirmation) at 390 × 844; 768 × 1024 and 834 × 1194; 1024 × 768 and 1194 × 834; 1280 × 800 and 1440 × 900; and 1920 × 1080. Record pass or fail against the type, target, width, empty-region, hero-scaling and zoomed-out rules. A fail blocks release. The iPad homepage hero and iPad pricing comparison reviewed on 6 November 2026 are required regression surfaces. After the remaining K54 centring (Product section, Get Started, Sample report opening — not the retired hero equal-spacing rule), the homepage sample diagnosis card and the ranked leaks must stay readable on phone and iPad at every listed breakpoint: type minima met, no clipping of the white card or leak names and £ amounts, and no pinch-zoom required. Hero layout itself follows the K48 rules in this section, not the withdrawn

K54 “equal spacing on all sides” requirement (K55).

16. Build reference: imports, fees, tax, payments and sign-in

16.1 CSV and XLSX columns and mapping (build against these; confirm against real exports)

General parsing rules (all platforms; CSV and XLSX)

- Find each column by its **header name**, not by position. Ignore case and surrounding spaces, and treat a UTF-8 byte-order mark as part of the file, not the header. Columns that aren't recognised are ignored. Platforms add columns without notice: for example, Shopify's own help page says "Lineitem SKU", but real exports say "Lineitem sku", and Shopify Payments added "Payout ID" in January 2026.
- If a **required** column is missing, the import fails and the message names the column. If an **optional** column is missing, the import continues and the dependent figure is labelled "estimated" or "not available" (section 6 rules).
- Amounts can include currency signs and thousands separators, and some EU files use a comma as the decimal mark. Etsy statements write empty amounts as "--". Strip the symbols and parse using the file's locale. "--" means empty, not zero.
- Dates come in several formats: text like "September 3, 2026" or "16 January, 2024", ISO dates with a time-zone offset, and Amazon's local formats. Parse all of them, and record the time zone if the file gives one.
- **Amazon's file starts with several description lines before the header row.** Find the header row by looking for its first columns ("date/time", "settlement id"), not by assuming it is row 1. Amazon.de, .fr, .it and .es reports can have **translated headers** (for example "Datum/Uhrzeit", "Abrechnungsnummer", "Bestellnummer", "Umsätze", "Verkaufsgebühren"). The Etsy Monthly Statement can also be translated (German "Datum, Art, Titel..."). Keep one header dictionary per language, and reject an unknown language with a clear message.
- Personal data columns are dropped at import, as section 6 requires. In the mapping tables below they are marked **strip**.

1. Shopify Orders export (Orders → Export; one row per line item, with order-level fields blank on later lines). Source: Shopify Help: Exporting orders. The same column set is used in every country; the currency is the store's base currency.

Column (as documented)	Margins 365 field
Name (order number, e.g. #1001)	Order reference shown to the user
Id	Order ID (match key, 12.7)
Created at	Order date (period)
Paid at, Fulfilled at, Canceled at	Status dates. A cancelled order (Canceled at

Column (as documented)	Margins 365 field
	set) with Financial Status "voided" or "refunded" is excluded from revenue, and the refund is counted
Financial Status, Fulfillment Status	Order status
Currency	Order currency (converted at the ECB rate, section 6)
Subtotal, Shipping, Taxes, Total	Order totals. **Shipping = shipping charged**, not the seller's cost (section 6). Taxes = tax charged
Discount Code, Discount Amount	Order-level discount (split across lines by value, 12.0)
Lineitem quantity, Lineitem name, Lineitem price, Lineitem sku	Line units, product name, unit price, SKU (product match key)
Lineitem compare-at price	Not used
Lineitem discount	Line-level discount
Lineitem requires shipping	Physical (true) or digital (false) line (12.0)
Lineitem taxable, Tax 1–5 Name / Value	Tax detail per line, where present
Lineitem fulfillment status	Not used
Refunded Amount	Order-level refund (split by line value, 12.0; units estimated, 12.0)
Shipping Country, Shipping Province	Destination country and region (US state, CA province, AU state) for tax. **Billing Country** is the fallback
Payment Method, Payment ID, Payment References	Payment method, plus the link to the Shopify Payments export
Source, Tags	Source (web, pos, draft). Tags containing "test" are flagged, not dropped silently

Column (as documented)	Margins 365 field
Vendor, Risk Level, Payment terms, Next payment due at, Checkout fees, Outstanding Balance, Employee, Location, Device ID, Notes, Note Attributes, Accepts Marketing	Not used. **Notes / Note Attributes: strip**
Email, Phone, Billing / Shipping Name, Street, Address1–2, Company, City, Zip, Province Name, Phone	**Strip** (keep only the country and province code)

2. Shopify Payments transactions export (Finance → Payouts → View transactions → Export; amounts in the payout currency). Source: Shopify Help: Viewing and exporting payout details. Shopify documents the first 11 columns. The remaining ones are seen in real exports, so **confirm them against a real export**.

Column	Margins 365 field
Transaction Date	Fee date
Type (charge, refund, dispute, adjustment, payout, reserve, ...)	Row kind. Only charge/refund/dispute rows are used for fees. **Skip payout and reserve rows**. Show adjustment rows in "Show the maths" without counting them as compared fees
Order	Join to the Orders export (by Name)
Amount, Fee, Net	Gross amount, **actual payment processing fee**, and net. Net = Amount − Fee
Currency	Payout currency
Presentment Amount, Presentment Currency *(confirm)*	What the buyer paid, in their currency
Card Brand, Card Source, Payout Status, Payout Date, Available On, Checkout, Payment Method Name, Payout ID *(confirm)*	Not used, except Payment Method Name (shown in "Show the maths")

- **Conversion fees (clarifies section 6):** the export has one "Fee" column. Shopify's international and currency-conversion charges are part of it and are **not given separately**. Unless a real export shows a separate column, record the whole Fee as **payment processing**, and say in "Show the maths" that it may include international and conversion charges. Don't invent a split.

- Rows can't be matched to a unique ID: use the full-row hash rule (12.7).

3. Etsy Orders CSV and Order Items CSV (Shop Manager → Settings → Options → Download Data → Orders → CSV type "Orders" or "Order Items", month and year). Source: Etsy Help: Download a spreadsheet of your sold transactions. Etsy doesn't publish a column list, so the lists below come from real files described by third parties. **Confirm against a real export.**

Orders CSV column	Margins 365 field
Order ID	Order ID (join key)
Sale Date	Order date
Currency	Order currency
Order Value, Discount Amount, Shipping Discount, Shipping, Sales Tax, Order Total	Order totals. **Shipping = shipping charged**
Card Processing Fees	**Actual** payment processing fee (section 6)
Adjusted Order Total, Adjusted Card Processing Fees, Adjusted Net Order Amount	After refunds: refund = Order Total − Adjusted Order Total. Use the adjusted fee as the actual fee
Order Net	Check figure only
Status, Date Shipped, Payment Method, Payment Type, Order Type	Status and type (Order Type separates online from in-person sales)
Ship Country, Ship State	Destination country and region
Number of Items, Coupon Code, Coupon Details, InPerson Discount, InPerson Location, SKU	Not used, except SKU as a fallback
Buyer, Buyer User ID, Full Name, First Name, Last Name, Street 1–2, Ship City, Ship Zipcode	**Strip**

Order Items CSV column	Margins 365 field
Order ID, Transaction ID	Match key (12.7)
Listing ID, SKU, Item Name, Variations	Product match: SKU first, then listing ID + variation, then title (12.7)

Order Items CSV column	Margins 365 field
Quantity, Price, Item Total, Discount Amount, Shipping Discount	Line units, price and discount
Order Shipping, Order Sales Tax	Order-level figures repeated on each line. **Count them once per order**, then split by line value
VAT Paid by Buyer	Tax detail (UK/EU)
Currency, Sale Date, Date Paid, Date Shipped	Currency and dates
Listings Type	Possibly marks digital listings. **Not used** (decision K2: no auto-detect)
Order Type, Payment Type, InPerson fields, Coupon fields	Not used
Buyer, Ship Name, Ship Address1–2, Ship City, Ship Zipcode	**Strip** (keep Ship Country and Ship State)

4. Etsy Monthly Statement CSV (Shop Manager → Finances → Monthly statements → Download CSV; optional). Each activity is one row, in the **payment account currency**. The columns are **Date, Type, Title, Info, Currency, Amount, Fees & Taxes, Net, Tax Details**. Some 2026 files also have **Status** and **Availability Date** headings. **Confirm against a real export.**

Row (Type + Title)	Margins 365 fee type
Sale "Payment for Order #..."	Check figure only (sales come from the Orders CSV)
Fee "Transaction fee: ..." and "Transaction fee: Shipping"	Referral / commission (actual)
Fee "Processing fee"	Payment processing (actual)
Fee "Listing fee", "Listing fee (auto-renew sold)", "Renew sold"	Listing (actual)
Fee "Regulatory operating fee"	**Referral / commission** (actual; see 16.2)
Fee "Credit for ..."	A negative of the matching fee type
Marketing "Etsy Ads", "Offsite Ads fee"	Ad spend (not compared)

Row (Type + Title)	Margins 365 fee type
Shipping "... postage label" / "shipping label"	Shipping cost for the order in Info (not compared)
Tax / VAT "VAT: seller fees", "Sales tax paid by buyer"	VAT on fees follows 12.8. Buyer tax is not seller revenue
Fee "Currency conversion"	Conversion fee (Pro cost line, section 6)
Refund "Refund to buyer for Order #..."	Check figure only (refunds come from the Orders CSV)
Deposit "... sent to your bank account"	Skip
Any other Type/Title	Counted as "other marketplace fees" (not compared) and listed in "Show the maths" for review

- The **Info** column links a row to its order ("Order #...") or listing ("Listing #..."). Monthly fees with no order (Etsy Ads, VAT on fees, subscriptions) are store-level costs for the month.

5. Amazon Seller Central: Payments → Reports Repository → Transaction (date range) report, "Custom Unified Transaction" CSV. Amazon's help text says "columns in the report might vary by country". Amazon's help pages need a sign-in, so these column names come from Amazon's help text quoted by a third party and from sellers' real files. **Confirm against a real export from each marketplace.**

Column (US file; UK and EU variants noted)	Margins 365 field
date/time	Posting date (period, section 6)
settlement id	Not used (it is part of the row hash)
type (Order, Refund, Service Fee, Adjustment, Transfer, FBA Inventory Fee, Shipping Services, ...)	Row kind. **Transfer rows are skipped**. Unknown types are counted as "other marketplace fees" and flagged
order id	Order ID
sku, description, quantity	SKU, name, units

Column (US file; UK and EU variants noted)	Margins 365 field
marketplace (e.g. amazon.com, amazon.co.uk, amazon.de)	**Region of the order** for presets and tax
account type, tax collection model	Tax collection model: marketplace-collected tax (12.8)
fulfillment / **fulfilment** (UK spelling)	FBA ("Amazon") or seller-fulfilled ("Seller")
order city, order postal	**Strip**
order state	Region (US state, CA province, AU state)
product sales, product sales tax	Product revenue and the tax on it
shipping credits / **postage credits** (UK), shipping credits tax	Shipping charged and its tax
gift wrap credits, giftwrap credits tax	Revenue (gift wrap) and its tax
promotional rebates, promotional rebates tax	Discount
marketplace withheld tax	Marketplace-collected tax (not the seller's liability, 12.8)
Regulatory Fee, Tax On Regulatory Fee	**Referral / commission** (16.2). Tax on fees follows 12.8
selling fees	**Referral / commission (actual)**. This includes any closing fee
fba fees	Fulfilment (counted, not compared)
other transaction fees	Other marketplace fees (counted, not compared)
other	Amounts on Service Fee rows: subscription → overhead; "Cost of Advertising" → ad spend; FBA storage → fulfilment. Anything else → other marketplace fees
total	Check figure: the sum of the money columns must equal total on each row
Transaction Status, Transaction	Deferred rows: count them on their **posting date** like any

Column (US file; UK and EU variants noted)	Margins 365 field
Release Date (added in some accounts in 2026)	other row. Never count a row twice when its status changes; the full-row hash plus status handles this

- Amazon's report has **no separate payment processing fee**: payment processing is part of "selling fees". So Amazon only has one compared fee type (referral / commission).

Getting real samples (recommended). Before writing the final parsers, the developer should have **at least one real export of every file above**, ideally one each from UK, US and an EU marketplace, and the Amazon report in German or French as well. Friendly-seller testing is already planned, so ask those sellers (20.1). To protect buyers' privacy, store only the **header row plus a few rows with buyer columns blanked** as test fixtures. Until real samples are checked, every column marked "confirm" above stays a working assumption.

6. TikTok Shop UK Finance Report XLSX (Beta; P1 build item, approved 5 Nov 2026; not public until the K53 restore gate)

TikTok's public UK Finance Report Guide is the initial source, not a guessed production schema. Export from Seller Centre → Finance → Statements → Export / Export history. Documented workbook tabs include **Order details, Statements, Reports, Payments, Reserve and Fees explanation**. Read headers by name, preserve raw values only for the import transaction, strip buyer personal data and delete the original XLSX immediately after success/failure/cancel.

Documented field family	Margins 365 treatment
Order/SKU IDs, quantities, settlement dates	Canonical order/line identity and monthly usage; merge and duplicate protection
Net sales, refunds and shipping charged	Revenue, shipping charged and refund linkage using ordinary calculation rules
Platform commission	Referral / commission actual fee; 9% UK preset including VAT, or 5% only with category evidence
Affiliate/creator commission	**Separate creator/affiliate commission cost line**, included in true profit
Seller-paid shipping and adjustments	Shipping cost and adjustments, with signs reconciled before import
Settlement total	Check: Net sales − Shipping − Fees + Adjustments, accounting for documented sign ambiguity

Documented field family	Margins 365 treatment
VAT/tax fields	No assumed complete VAT breakdown; estimate from VAT-inclusive prices and seller settings, labelled

Unknown extra columns warn and continue. Missing required columns or unreconciled totals fail the whole import, name the issue and preserve previous results. No partial TikTok import. Estimates lower confidence by one level and show the reason. Post-import feedback asks “Did these fees match Seller Center?” and “My file didn't work” can report unexpected/missing headers plus an optional secure support file with explicit retention consent. Beta exit needs real ordinary, refunded and affiliate files plus reserve/adjustment and overlap cases.

16.2 Fee presets: approved table and how it is applied (adds detail to 12.3)

- **Fee-type mapping additions (clarifications, no behaviour change):**
  - Etsy "Regulatory operating fee" and Amazon "Regulatory Fee" are platform charges on each sale, so they map to **Referral / commission** and are included in that preset where the seller's country charges them.
  - A new row in the 12.3 mapping table: **Other marketplace fees** (Amazon "other transaction fees", unknown statement fees). They are **counted in fees, not compared**.
  - Etsy currency conversion (2.5%) is a **conversion fee** (Growth and above cost line), not a compared fee.
  - Shopify plan fees, Amazon selling-plan fees and Etsy Plus are **subscriptions**. They are overheads only if the user enters them (12.3, as now).
- **Region of a sale:**
  - Shopify: the store's country (from the user's settings, defaulting to the home currency's region).
  - Etsy: the country of the seller's payment account (Etsy charges processing fees by bank location).
  - Amazon: the "marketplace" column.
  - For **EU**: Etsy's processing fee is the same in all euro countries. The regulatory operating fee applies only in France, Italy and Spain (and Hungary per one Etsy page). Shopify's rates can differ by EU country. Store EU presets **per country** where they differ, with the EU row as the default.
- **Fixed fees published in another currency** (Etsy's $0.20 listing fee is published in USD) are converted at the ECB rate on the order date (section 6), and the conversion is shown in "Show the maths".
- **Listing fee preset:** $0.20 per unit sold (Etsy charges $0.20 per extra unit sold, and the original listing fee is already paid for the first). The actual listing fee in the Monthly Statement also includes fees for listings that didn't sell. That is a real cost and stays in the comparison.
- **Payment processing preset = the standard domestic online card rate.** Actual fees include higher rates for international, Amex and premium cards. That is a real cost to the seller, so a fee drag it causes is valid. "Show the maths" should say "your actual rate includes international and premium cards".

- **Amazon referral preset at launch:** 15% (Amazon's "Everything else" rate in every region, with that region's minimum per item), approved (decision K3), with this "Show the maths" note: "Amazon's referral rate depends on category (5–20%). If your category's rate is above 15%, part of this fee drag is your category's standard rate."
- **Shopify preset plan:** Basic in every region (approved, decision K3; no plan selector at launch).
- The table is filled in from the approved table below (approved by Akthar, decision K3). Rows marked "confirm" are checked on the official page before they go live. The table is rechecked every 6 months (12.3).

Approved fee preset table (decision K3, 29 October 2026). All rates are the platforms' standard published rates, checked 29 October 2026, excluding VAT unless noted.

Shopify Payments, online standard card rate (payment processing), by plan. Plan prices are shown for information only (subscriptions aren't compared).

Region	Basic	Grow	Advanced	Plus	Amex / international (Basic)	Third-party gateway fee (Basic / Grow / Advanced / Plus)	Source
UK (GBP)	2% + 25p	1.7% + 25p	1.5% + 25p	1.3% + 25p	3.1% + 25p	2% / 1% / 0.6% / 0.2%	shopify.com/uk/pricing
EU (EUR, Ireland checked; excl. VAT)	2% + €0.25	1.7% + €0.25	1.5% + €0.25	1.4% + €0.25	3.1% + €0.25	2% / 1% / 0.6% / 0.2%	shopify.com/ie/pricing. **Other EU countries: confirm on each country's Shopify pricing page**
US (USD)	2.9% + 30¢	2.7% + 30¢	2.5% + 30¢	2.25% + 30¢	premium 3.5% + 30¢; international +1%	2% / 1% / 0.6% / 0.2%	shopify.com/pricing
Canada (CAD)	2.8% + 30¢	2.6% + 30¢	2.4% + 30¢	2.15% + 30¢	3.5% + 30¢	2% / 1% / 0.6% / 0.2%	shopify.com/ca/pricing
Australia (AUD)	1.7% + 30¢	1.55% + 30¢	1.35% + 30¢	1.15% + 30¢	Amex 2.9% + 30¢; international 3.5% + 30¢	2% / 1% / 0.6% / 0.2%	shopify.com/au/pricing

The third-party gateway fee applies when the seller doesn't use Shopify Payments. It is billed on the Shopify invoice and doesn't appear in any export. It is shown for reference only and isn't a preset at

launch.

Etsy (the same for every shop unless noted). Sources: Fees and taxes for selling on Etsy, Payment processing fees, Regulatory operating fee, Fees & Payments Policy.

Region	Referral / commission: transaction fee	Referral / commission: regulatory operating fee	Payment processing	Listing
UK	6.5% of item + shipping + gift wrap	0.48%	4% + £0.20	$0.20 per unit sold (converted)
EU (euro countries)	6.5%	France 1.14%, Italy 0.80%, Spain 0.88%, Hungary 1.97% (listed on one Etsy page; confirm), others 0%	4% + €0.30 (non-euro EU countries such as Denmark and Sweden: 4% + a fixed fee in local currency; confirm)	$0.20 per unit sold
US	6.5%	0%	3% + $0.25	$0.20 per unit sold
Canada	6.5%	0.50%	3% + CA$0.25 for domestic or US orders; 4% + CA$0.25 for other international orders	$0.20 per unit sold
Australia	6.5%	0%	3% + A$0.25 domestic; 4% + A$0.25 international	$0.20 per unit sold

Not compared: Offsite Ads (15%, or 12% for shops with $10,000+ in sales over 12 months, capped at $100 per order) is **ad spend**. Currency conversion (2.5%) is a **conversion fee**. VAT on seller fees follows 12.8.

Amazon referral fees (referral / commission), main categories. FBA fees are **counted, not compared**. Selling-plan fees are subscriptions. Sources: US, UK, EU: Amazon.de (the other EU stores use the same European schedule for these categories; confirm each), Canada, Australia.

The UK and EU clothing rates include Amazon's reductions effective 5 January 2026.

16.3 Official tax rate sources and recheck timing (adds detail to 12.8)

Region	Official source	What to take from it
UK VAT	GOV.UK: VAT rates and HMRC: rates of VAT on different goods and services	20% standard, 5% reduced, 0% zero (standard rate unchanged since 4 January 2011)
EU VAT	European Commission: Taxes in Europe Database (TEDB) via the EC VAT rates page. Member states	Standard and reduced rates for each of the 27 countries. Several

Region	Official source	What to take from it
	supply TEDB's data. Where TEDB and a national tax authority disagree, use the **national tax authority** and note it	standard rates changed in 2024–2025, so don't copy an old list
Canada GST/HST	CRA: GST/HST calculator (and rates)	GST 5% (AB, BC, MB, QC, SK, NT, NU, YT); HST 13% ON, 14% NS (from 1 April 2025; 15% before), 15% NB, NL, PE. CRA's table also shows PST for information
Canada PST / QST / RST	The provincial governments' own tax pages (BC Ministry of Finance, Saskatchewan Finance, Manitoba Finance, Revenu Québec). The developer records each page's link when filling the table	BC 7%, MB 7%, SK 6%, QC 9.975% (as shown alongside CRA's GST/HST table on 29 October 2026; confirm on each provincial page)
Australia GST	ATO: GST and How GST works	10% on most goods and services (some GST-free)
US sales tax	**No built-in table** (12.8, unchanged): US tax comes only from the export. If a state's rate is ever needed for wording or support, the official sources are each **state's Department of Revenue** website and, for the 24 member states, the Streamlined Sales Tax rate and boundary files	Not used in calculations

- **Store rates with dates.** Each row has country (and province), rate type, rate, **valid from**, **valid to**, source link and the date checked. An order uses the rate **in force on its order date** (for example, a Nova Scotia order from March 2025 uses 15%, not 14%).
- **Rate per product:** at launch, use the **standard rate** unless the export gives the tax charged. Reduced and zero rates (for example UK children's clothes) are applied only from the export's tax amount, never guessed. "Show the maths" says which applied.
- **When to recheck:** at least every 6 months (12.8), plus after each **UK Budget** (usually autumn), on **1 January and 1 July** for the EU (when most rate changes take effect), and after **Canadian provincial budgets** (February–April). Australia: the 6-monthly check is enough. Record each check, even when nothing changed.
- These tables are **estimates, not tax advice** (12.8). The 12.8 instruction to recheck marketplace-collection guidance at build still applies.

16.4 Live Stripe Managed Payments subscriptions: developer checklist

1. Akthar creates/owns Stripe, enables two-step sign-in, invites the developer and completes business, bank and Managed Payments review.

2. Pin a supported Stripe API version, keep secrets in DigitalOcean's secret store, and use least-privilege keys for subscriptions, checkout, portal, invoices, refunds and disputes.
3. Create four recurring products/prices or an equivalent clear structure: £39/£390, £79/£790, £129/£1,290, £199/£1,990, tax-inclusive using the accountant-approved SaaS tax code. Configure 14-day trials on every monthly/annual price, with a card collected up front and trial-end reminders. Do not configure a founding or first-100 discount (K42).
4. Checkout records account ID, chosen plan/price, trial entitlement (Pro or Scale), trial start/end, first charge date/amount and prevents a second trial/subscription. Apply one trial per account; recommended default is also per card where Stripe permits. Show the K43 and K52 Checkout disclosure before card submission, without any email-cancel invitation. Plan & billing 12.5A is the cancel route, with exact account-closure and deletion-date/export warning. Keep Pro updates the scheduled day-15 price to Pro without starting a new trial.
5. Webhooks subscribe to 12.10 events, verify signatures, process IDs once and read latest state. Configure trial conversion/cancellation, Smart Retries for up to 14 days, receipts/invoices, deletion scheduling and support details. A cancelled trial must not convert because of event ordering.
6. Run all 12.4A, 12.11 and deletion tests plus concurrency and annual monthly-boundary tests. Verify public Pricing trial/charge/cancel disclosures, Terms, Refunds & cancellation, Privacy deletion wording, Contact and Help before Stripe review.
7. v18 is signed off. Go live only after Stripe approval, legal/accountant review (including refund-after-trial), matching live prices/trial settings, separate live webhook secret and deletion/restore alerts. Perform the approved trial/cancel, trial/convert, purchase/refund and deletion proof tests; record actual fees/descriptor.

16.5 Sign-in and email

- “Continue with Google” first, “Continue with email” second. Use a replaceable internal auth interface and Google OIDC `sub`, signature/issuer/audience/expiry validation and `email_verified=true`.
- Email sign-in retains v17.1 email + password and verification link unless OD8 is approved. Password minimum 15 characters, breached-password rejection and modern hashing. Passwordless code+link is only a recommendation pending OD8. Password reset follows 5.1 (K57): Forgot password?, SES reset mail, time-limited single-use link, and the Q34 rate-limit and Google-only defaults. Rate-limit all sign-in, reset and linking routes.
- Link Google to an existing account only with verified matching email and the anti-takeover rules retained from v17.1. Secure httpOnly SameSite sessions, sign-out-all and no token/password/link logging.
- Transactional emails: verification/sign-in, password reset, trial confirmation using the K43 and K52 facts, pre-trial-end reminder (recommended default 3 days) with chosen-plan amount, charge date, K52 feature-lock and overrun facts, Keep Pro where applicable, and a link that opens Plan & billing, 80% order-limit notice, failed-payment/update-card with deletion/export warning, renewal reminders, trial/paid cancellation confirmation with the account-closure and data-deletion date and Download my data, and a deletion confirmation when the wipe runs. There is no separate email-request account-closure confirmation and no founding-price-end notice. No 60/30-day lapsed-data warnings remain.

- SES Stockholm (`eu-north-1`) is approved (K36). Account/transactional emails are processed in the EU (Stockholm), while application and database data remains in DigitalOcean London. Privacy policy, DPA/subprocessors and public wording must say this accurately; do not claim UK-only email processing.
- Google launch tasks are in 20.3. No account controls appear to signed-out visitors.

17. Sample data, Clear sample data and Start fresh

17.1 Sample and onboarding

Built-in sample orders and costs are labelled **Sample data** everywhere, including public sample report, sample shop, products, hero summary and exports. They are not live results and never consume order allowance. A template-only first upload follows Q11; a successful first real order upload clears sample rows/costs atomically with that import. Failed, cancelled or blocked uploads leave sample data unchanged.

17.5 Public homepage onboarding

K44, with the TikTok paragraph amended by K53. These modules sit on the signed-out homepage. They open with a tap on phone and tablet, not hover-only. Design chooses expandable, disclosure or inline layout; the words below are the approved copy (K44) as amended.

What files do I need?

You upload reports you already download from your sales platforms. We never connect to your store.

Shopify. In Shopify Admin go to Orders → Export and download the Orders CSV. For actual payment fees, also download your Shopify Payments transactions CSV (optional).

Amazon. In Seller Central go to Payments → Reports Repository → Transaction, and download a Custom Unified Transaction CSV. This file uses posting dates.

Etsy. Download both the Orders CSV and the Order Items CSV (both are required). The Monthly Statement is optional and is used for actual card-processing fees.

TikTok Shop UK (Beta): Excel import coming soon

You can also enter costs with the product CSV template or type them in. Buyer names, emails, addresses and similar personal details are removed at import and are never stored.

Your plan decides how many of these platforms you can use at once (recommended default while TikTok is coming soon: Starter 1 of 3, Growth up to 2 of 3, Pro and Scale all 3). eBay is not a launch platform.

How to use this platform

1. Start your 14-day free trial and choose a plan.
2. Add your shop and pick the platform it uses.
3. Download the files above and upload them.
4. Add your product costs (and ads, shipping or overheads if you have them).
5. Review the import, then see your true profit, Health Score and the ranked fixes to make first.

A quieter secondary line may say: “Prefer to look around first? Open the sample report.”

The signed-in guided journey in 17.1 is unchanged: sample shop → choose plan → add shop → upload → add costs → review import → first results.

17.6 Homepage Product section copy

K49, with K54 layout: centre this whole section from the Product introductory text down to the sample result box. In each of the six block titles, place an information icon (i) one space after the title text, in place of any question-mark (?) help control. The tooltip words below and tap-to-open behaviour stay. Design chooses layout; the words below are the approved copy (K49).

Headline. See where your profit is leaking.

Supporting line. Upload your platform reports. We’ll show your true profit, a Health Score and the six leaks that are costing you the most this month — then the first fix to make.

Sample proof number. One written line, clearly labelled as sample data, using an existing sample figure already shown on the page. Do not invent a new marketing number.

> Sample result: on this example shop, the biggest leak is costing £840 a month.

A quieter supporting note may add: “True profit for the period shown is £2,691. Health Score 69. This is labelled sample data, not a live customer result.” The single proof number is £840 a month. If the built sample dataset changes, update the labelled number to match it; do not keep a stale proof figure.

Cards. Each card has a short title and one result line. Jargon belongs in the tooltip.

1. **True profit.** See what you actually keep after product, packaging, shipping, ads, fees and returns. Tooltip: Every figure has Show the maths. Net margin is true profit divided by revenue. Overheads are included on Growth, Pro and Scale.

2. **Health Score.** Get a 0–100 score for each shop, with a plain-English reading of how healthy it is. Tooltip: The score has a band (Strong, Needs attention or At risk) and a confidence label based on the data you uploaded. The full score and breakdown are included on every plan. Do not say “Paid plans unlock the full score breakdown.” There is no Free plan, and the breakdown is not a higher-tier extra.

3. **Ranked leaks, in pounds.** See the six leaks that are costing you money this month, largest

first. Tooltip: The six leaks are unprofitable ads, high returns, loss-making products, shipping subsidy, fee drag (fees higher than the usual platform rate) and thin pricing.

4. **Where the money goes.** See how costs split across your products, with losses marked clearly. Tooltip: A chart shows the share of costs and true profit by product. Some people call the cost-share chart an allocation chart.

5. **Price and ads calculators.** See the price you need to hit your target margin, and whether your ads are paying for themselves. Tooltip: Break-even ROAS is how much revenue you need per £1 of ads. ACOS is ad spend as a share of revenue. Target-margin pricing works across the platforms you use.

6. **Try a change before you make it.** Model a price or cost change and download a PDF of the results — on Growth, Pro and Scale. Tooltip: Growth includes two saved scenarios; Pro and Scale include unlimited saved scenarios. The PDF sits beside the results, not in the page header. Starter does not include saved scenarios or the PDF.

Retired from this section: “Everything in the diagnosis — not a partial preview”; “Paid plans unlock the full score breakdown”; open use of “allocation donut”, “Band + confidence”, “ACOS” or “fee drag” without a plain-English home in the result line (those terms may appear only in the tooltips above).

17.7 Homepage, sample-report and pricing layout (K54)

Approved by Akthar Uddin, 6 November 2026 at 12:54 Europe/Madrid. These are product requirements for Design and Development, not CSS instructions and not code. Do not make unrelated changes.

Homepage — hero sample diagnosis image. The K54 rule that the white card must be perfectly centred in the green panel, with equal spacing on all sides, is withdrawn (K55) — Akthar said that result looks worse. Restore the pre-K54 hero requirement: the hero visual (green panel and sample card) follows the K48 scaling rules in 15.5. The image scales with the accompanying content as part of the same group; it is never a fixed panel independent of the text; it must not leave the sample card floating in empty space. **K48 conflict flag:** the withdrawn K54 equal-spacing rule can fight K48’s “not a panel locked to the right half with the sample card floating in empty space” rule, because equal insets inside a large green panel create vacant space around the card. After K55 that conflict is removed. S48 is retired.

Homepage — Product section. Centre the whole Product section, from the Product introductory text (17.6 headline and supporting line) down to the sample result box. In the six block titles, replace any “?” help control with an information icon (i) placed one space after the title text. K49 tooltip copy and tap-to-open behaviour stay.

Homepage — Get Started. The block that contains the two 17.5 questions (“What files do I need?” and “How to use this platform”), labelled Get Started on the page, moves to sit directly underneath the existing homepage Tools section. Centre that whole Get Started area. The answers stay as in 17.5 (including the K53 TikTok coming-soon line and no TikTok export instructions).

Homepage — differentiation line. Near the top of the homepage (K56). Until the K53 restore gate (S47) passes, the line is, word for word:

> Built for single or multi-platform sellers (Shopify, Amazon, Etsy, TikTok coming soon).

When S47 passes, the line becomes exactly Akthar's wording:

> Built for single or multi-platform sellers (Shopify, Amazon, Etsy, Tik-Tok).

Do not treat TikTok as a usable platform until that gate. The FAQ answer "Do you connect to my store?" still says no 3PL integration is required; that is unchanged and fine.

Sample report — opening section. Centre the opening section of the Sample report page.

Sample report — Open Sample Shop. Keep the first dashboard layout as it is. Keep the K54 centred button labelled exactly **Open Sample Shop**, filled in brand green `#34726B` (section 22), at the bottom of that dashboard section. In the opening section, replace the in-page "Start 14-day free trial" button with a second **Open Sample Shop** button (K55). In the live build that trial button is in the first section of `src/components/marketing/SampleReportPage.tsx` (headed "Sample report" / "What a Margins 365 diagnosis looks like"), not inside the dashboard itself. Two Open Sample Shop buttons on the page are approved. The header primary remains "Start 14-day free trial". Both buttons open the existing signed-in sample shop.

Mobile. After the remaining centring changes (not the retired hero equal-spacing rule), the sample diagnosis card and the ranked leaks stay readable on phone and iPad at the K48 breakpoints (phone 375–430, iPad portrait 768–834, iPad landscape 1024–1194, and the larger widths). They meet the type minima and 44 px targets. Card text, leak names and £ amounts are not clipped and do not require pinch-zoom.

Pricing. Keep the "Most popular" badge on Pro (K54) on every plan tile, monthly and annual. Restore the pre-K54 Pro tile badge labelled exactly **Command centre** and show it **above** "Most popular" on the Pro tile (K55). That wording comes from the live Pricing page before K54 (`src/components/PricingPage.tsx` on Origin main, last present on commit `1166ff2359404a6eac234e9fd9cb078860604bb2`: the Pro tile rendered a "Command centre" span when it was not the Most popular plan). The header "Start 14-day free trial" CTA still scrolls to the plan cards and focuses Pro. The full comparison uses the 3.1 matrix and must not include an Email support row. Shops and Seats use plain sub-text, with no (i) and no "?". The Hard limits & billing FAQ includes the questions and answers in 3.2.

17.2 Clear sample data

Available only while sample data is loaded. Confirmation names exactly what is removed and says the user's own data is unaffected. Cancel is default and changes nothing. Own uploads, costs, ad spend, overheads, settings, plan and billing are untouched.

17.3 Start fresh

- Deletes uploaded order datasets, Margins 365 templates and product costs, ad spend and attributed revenue, overheads, calculators/scenarios and remaining sample data.
- Keeps account/sign-in and verification, active subscription or legacy lifetime entitlement, billing/purchase records, shops and team configuration, home currency, time zone, tax settings, target margin, user FX and conversion settings.
- Confirmation lists actual item counts, says what is kept and “This can't be undone”; Cancel is pre-selected and Escape/back/close cancels. It waits for an import to finish or fail; a blocked import has no rows to wait for.
- Deletes data immediately from app/results/exports/PDF and from live storage/backups within 7 days. Does not close the account or cancel the subscription.
- Logs one privacy-safe event: type, timestamp, internal account ID, plan and item counts only.

17.4 Acceptance

1. Cancel/Escape/back leaves all data and logs unchanged.
2. Confirmed Start fresh shows no products/revenue/profit/score, removes saved datasets/costs/ads/overheads/scenarios, and preserves subscription or legacy entitlement, shops/team, billing and settings.
3. Current monthly order usage is **not reset** by Start fresh, Clear sample data, time-zone changes or re-uploads.
4. The owner closes the account by cancelling in Plan & billing (K51); Start fresh never substitutes for erasure of the account.
5. First successful real order upload removes all sample labels/rows/costs; blocked/failed/cancelled imports do not.

18. Deletion at subscription end and original files

- **Active paid/trial and legacy lifetime:** product data follows 12.6 and plan-history display rules. Trials have no special retention exception.
- **Ended subscription:** at the disclosed trial/paid access end, all product/user data in 12.6 is wiped. After an owner cancel, the login is also removed (K51). Final payment failure and immediate first-payment refund wipe when access ends; the login is removed then as well, so there is no leftover empty account that would need an email-closure path. There is no 12-month lapsed period and no restore-on-resubscription. Backups age out within 7 days.
- **Cancellation notices:** paid/trial cancellation screen and email state the exact access-end, account-closure and deletion date and offer Download my data. A cancelled trial keeps access until the original trial end, not immediate deletion.
- **Original CSV/XLSX:** deleted immediately on successful, failed or cancelled import; abandoned import cancels after 1 hour. Raw files are in temporary non-backed-up storage, never in exports, ordinary logs or support reports. Consensual TikTok fixtures are an exception with explicit consent and the recommended 30-day retention default (Q25).
- **Account closure:** the owner cancels in Plan & billing; that also closes the account (K51). At the disclosed access end the login and product data are removed. No Delete account UI exists

and there is no email-closure workflow. The privacy policy lists a GDPR contact address only.

- **Start fresh:** immediate app deletion and backup ageing within 7 days; preserves subscription and shop/team configuration. It is not a substitute for cancellation or closure.
- **Restore safety:** disaster-recovery restore re-applies deletion tombstones and removes raw/deleted data before user access. Deleted subscription data never returns.
- **Acceptance:** D1–D12 plus raw-file deletion in every import outcome. No old lapsed-retention clock/warning/restore flow remains.

19. Backups, hosting and scheduled clean-up

19.1 Seven-day deletion promise

Account closure, Start fresh, subscription/trial-end deletion, final-failure/refund deletion, raw files captured exceptionally and any user deletion leave live storage and all backups within 7 days. Backup retention is 7 days or less. Deleted product data is never restored; legally required billing/tax records and privacy-safe deletion tombstones follow their separately disclosed retention rules.

19.2 Hosting

DigitalOcean App Platform and Managed PostgreSQL in London (LON1), managed production database with daily backups and point-in-time restore for 7 days. Do not use the development database without backups. Original CSV/XLSX files need no persistent storage. Existing £ cost estimates are informational, not repriced in v18. Legal review of DigitalOcean's DPA remains open.

19.3 Scheduled jobs and monitoring

- Every 15 minutes: cancel imports abandoned for 1 hour and delete raw files; process due trial/paid/final-failure/refund deletion jobs; apply deletion tombstones and backup-retention tasks. Trial reminders and cancellation/deletion confirmations use scheduled jobs with delivery alerts.
- Daily: Stripe entitlement reconciliation; backup/restore checks; subscription/invoice consistency; email delivery and webhook failure alerts.
- Deletion cut-offs are enforced by access rules even if a job is late. Missed jobs catch up without skipping; warning/deletion timestamps are recorded in the user's account time zone and UTC internally.
- Error logging uses the approved DigitalOcean logs/alerts baseline or a separately approved tool with UK/EU processing and no personal data. Secrets, authorization headers and file contents are never logged.

19.4 Acceptance

1. App/database/backups are LON1; production managed database has 7-day or shorter backup retention.
2. Abandoned import file deleted by 1 hour plus the 15-minute job interval; no Free deletion timer exists.

3. Trial/paid deletion and reminder/confirmation jobs survive a missed run and catch up correctly; a cancelled trial never converts because a job was late.
4. Restore test removes raw/deleted subscription data before user access; a later signup cannot recover it.
5. Account closure, Start fresh and ended-subscription data are absent from backups older than 7 days; privacy/DPA wording and deletion scope match.

20. Launch actions for Akthar

20.1 Real exports and Beta evidence (blocking parser confidence)

Provide real UK/US/EU Shopify, Etsy and Amazon samples, including translated Amazon where possible. TikTok Shop UK remains a P1 Beta build without a real file (K25); public copy stays at the K53 coming-soon line until the reader passes S47. Real ordinary, refunded, creator/affiliate and adjustment files are required to validate and remove Beta. Fixtures contain only headers and privacy-stripped rows unless explicit support consent says otherwise.

20.2 Stripe subscriptions (blocks launch)

Complete business identity/bank checks and Managed Payments approval; invite developer securely; make all four monthly/annual tax-inclusive prices and 14-day trials (no founding discount); configure trial reminders, Smart Retries, portal, receipts/invoices, statement descriptor and support contact. Complete real trial-cancel/no-charge through 12.5A, trial-convert, purchase/refund and deletion/restore tests. Public pages show the K43 trial wording, post-trial price, charge date, cancellation route, deletion dates, privacy and support.

20.3 Google sign-in (blocks Google launch)

Google sign-in is enabled (K57). Email and password sign-in stays. The setup checklist below remains the operational record.

Create business-owned Google Cloud project; configure OAuth consent with homepage, privacy, terms, support and logo; request only openid/email/profile; add authorised origins and redirect URIs for the host that is actually live. Until cutover that host remains **marginos.online**; the target host is **margins365.com** (K58). Keep the existing marginos.online entries until the new origin is verified and public traffic has moved. The user-facing product name is **Margins 365**. Trademark clearance is not implied; complete Google’s own brand-verification requirements separately. Enable only after tests pass.

20.4 Legal, accounting and operations

- Legal: K43 trial disclosures/reminders and auto-charge, the 12.5A easy-cancel flow, whether first-payment refund rights still apply after trial conversion, subscription/cooling-off terms, UK rules from 1 Jan 2027, cancellation and permanent deletion warnings, minimal login/legal-record exceptions, privacy section 10 closure route, DPA/subprocessors, DigitalOcean DPA, SES

Stockholm/EU processing, and the K58 name **Margins 365** / target domain **margins365.com** (trademark clearance is not implied; the new domain is not treated as already configured).
- Accountant: the Margins 365 product VAT position, annual discounts, Managed Payments/deemed supplier and international sales.
- Domain/email: the approved user-facing name is **Margins 365** and the target public domain is **margins365.com** (K58). Live public hosting remains **marginos.online** and transactional email continues to use the existing SES identities until the 20.5 cutover. `PRODUCT_NAME`, domain/email and asset paths stay config values. Do not invent support or privacy email addresses. Trademark clearance is not implied, and the new domain is not treated as already configured.
- Devices/monitoring: real iPhone, Android, iPad and PC; DigitalOcean alert configuration and launch reconciliation dashboard.

20.5 Brand and domain cutover (K58)

This is a document decision, not itself a DNS, deployment or repository change. Repository paths, historical `MarginOS-*` brief filenames, CSS tokens such as `--mo-*`, and live code paths stay as identifiers. Current logo and colours stay; do not design a new logo.

Target (approved): user-facing name **Margins 365**; public domain **margins365.com**. **Current live (until cutover):** public host **marginos.online** and the existing SES sending identities.

Do not treat **margins365.com** as already configured. Do not invent support or privacy mailboxes. Trademark clearance is not implied.

Developers migrate the following, then verify in a test environment before any public cutover:

1. **Brand strings.** Set `PRODUCT_NAME` to **Margins 365**. Every user-facing interface, PDF, email, legal page, sample-report heading (“What a Margins 365 diagnosis looks like”) and section 22 label must read from that value. Customer-facing copy must not present MarginOS or MarginSeam as the live product name.
2. **Public URLs, links and metadata.** Prepare canonical, sitemap, Open Graph and other absolute links for **margins365.com**. Keep serving **marginos.online** until cutover, then redirect the old host to the new one. App links, password-reset links (5.1), legal-page links and third-party consoles must agree on the same live host before traffic switches.
3. **Google OAuth.** Add authorised JavaScript origins and redirect URIs for **margins365.com**. Keep the existing **marginos.online** entries until cutover succeeds. Update the consent-screen homepage, privacy, terms and logo URLs only when those new URLs exist. Google brand verification is a separate requirement; this rename does not imply it is done.
4. **Amazon SES.** Verify **margins365.com**, and configure DKIM, DMARC, SPF and MAIL FROM on the new domain. Keep sending from the current SES identities until those checks pass and test mail is delivered. Do not invent From/support/privacy addresses in this spec.
5. **Stripe and public callbacks.** At cutover, update success, cancel, webhook and customer-portal return URLs, and any other public Stripe links, to the target domain. Confirm the statement descriptor in Stripe at setup; do not invent a replacement for the existing live

`LINK.COM* MARGINOS` (or other currently confirmed) descriptor here.

6. **Verification before cutover.** Send test mail that passes DKIM/SPF/DMARC; complete Google sign-in on the new origin; complete a Stripe test-checkout return; and confirm the public journey does not mix old and new hosts. Only then switch public DNS/traffic.

21. Sources

v17.1 official platform, fee, tax, Stripe, Google, hosting, accessibility and brand sources remain incorporated in sections 16 and 22 and were not independently revalidated for v18. New commercial and UX decisions come from Akthar's 5 Nov 2026 approvals and these research briefs:

Historical research briefs (filenames unchanged, as repository identifiers):

- `MarginOS-Tiers-and-UX-Brief.md`: competitor packaging/UX research, tier table, TikTok public-guide findings, hard-limit recommendation superseded by Akthar's hard-limit decision.
- `MarginOS-Subscription-Brief.md`: subscription lifecycle, portal, retry, retention, sample/trial recommendation and UK rules effective 1 Jan 2027.
- `MarginOS-Change-Brief-Nov1.md`: sign-in, account, Google-first, PDF placement, account-closure and public-page research.
- TikTok Shop UK public Finance Report Guide, Seller Centre Finance Statements XLSX export route; commission preset 9% including VAT and 5% only for evidenced categories.
- Stripe Managed Payments/subscriptions/customer portal, Google OIDC, DigitalOcean, WCAG 2.2 and official fee/tax sources listed in v17.1 section 21.

Competitor prices and website observations are dated research inputs, not enduring claims. Legal and tax references require professional review before publication.

22. Brand and visual identity (light only in v18)

Approved brand rules K12 and K21 remain. **K13 is reversed on 5 Nov 2026: the app is light only and has no dark-mode toggle.** Every rendered product name uses the single `PRODUCT_NAME` config value; the default is **Margins 365** (K58). Domain/email and logo asset paths remain configurable. Until cutover, emails and assets may still be hosted on the existing live domain (**marginos.online**). Current logo and colours stay; do not design a new logo. **K13 light-only rule:** Historical dark values are removed. Emails are still checked in dark-mode mail clients and PDF is always light. Design still decides layout; this section fixes colours, files and testable rules.

Sources: the current app colours come from the branding doc, section 1.1 (primary teal "about #34726B", mint "about #E7F7F6", Health Score ring "about #CA7E36"). They were cross-checked against Akthar's 14 iPad photos (`brand/app-screens/`) by taking the median pixel colour of the the former upgrade buttons and the logo square in every photo where they appear. That gives (54, 116, 108) ≈ ***#36746C****, which is within ΔE2000 0.8 of #34726B, so the two can't be told apart. The true-profit figure measures about* ***#3F7D64****. These are photos of a screen, so* ***Design confirms the exact value from the app's own CSS****. If the CSS value differs by less than ΔE2000 2, the CSS value is*

used and every contrast below still holds (QA-13). All other values were computed by the Business & Product Agent with the WCAG 2.x formula. Where this section and the spec's other sections disagree, the spec wins. Design still decides layout.

22.1 Palette

Role	Light value	Use	Contrast / rule
Brand teal-green	#34726B	Logo/icon, primary buttons, focus ring, main chart series	White on teal 5.58:1; teal on white 5.58, page 5.20
Hover / pressed	#2B605A / #224C47	Primary buttons	White 7.18 / 9.58
Link	#2B605A, underlined	Text links, Show the maths	7.18 on white; 6.70 on page; 6.51 on tint
Brand tint	#E7F7F6	Headline action/info/sample banner	Navy text 14.76
Navy	#061F45	Body text/headings only, never brand accent	16.28 on white; 15.18 on page
Page / card / inset / muted	#F5F7FB / #FFFFFF / #EEF1F6 / #475569	Base UI	Muted on page 7.07
Decorative / required borders	#DCE3EE / #7A879C	Cards/inputs	Required border on white 3.64
Orange	#FF8A2A	Marketing/video only, never an app state	—
Removed	Blue #0670FF, #0560E0, #0556CC, #5A9DFF, #3D8BFF; info tint #E8F1FF; navy as brand accent	—	—

22.2 The semantic colour rule (kept)

- Green, amber and red mean only:
  - Strong / Healthy;
  - Needs attention / Thin (and warnings);
  - At risk / Losing money (and errors).
- They are **never** used for buttons, the logo, chart categories or decoration.

- Brand teal is **never** used for a verdict, band or result.
- Colour is never the only signal: the band or verdict word and an icon are always shown with it (15.7).
- The score is never called "Healthy". "Healthy" is a product verdict (12.1).

22.3 Buttons vs "Healthy"/"Strong" chips (K21)

The colour family stays teal-green, so the rule is met with **hue distance plus style**. Every point below can be tested.

#	Requirement	Button (Upgrade or any primary action)	Healthy / Strong chip or label	Check
1	Hue distance	Brand teal #34726B (hue 173°)	Semantic green: text #2D7A24 (hue 114°), arc and icon #2F8A3A (hue 127°)	ΔE2000 teal vs chip text **21.0**, teal vs arc **20.8** (today 7.9)
2	Fill	**Solid** #34726B, white text	**Never solid.** Tint #EDF7E6 with #2D7A24 text and a 1 px #2D7A24 border	White on button **5.58**; chip text on tint **4.86**; chip border on white **5.36**; button vs chip tint **5.06** (clearly different in greyscale: L* 44 vs 96)
3	Content	A verb label (for example "Upgrade to Growth"); a lock icon is allowed; **never** ✓	Always the word ("Healthy", "Strong") **plus an icon** (✓ for Healthy and Strong)	Text search and visual QA
4	Shape and size	At least 44 × 44 px (15.4); corner radius 10 px, never a pill	A pill, at most 28 px tall	Visual QA at 320 px and on PC
5	Behaviour	Hover #2B605A, pressed #224C47, a visible 3 px focus ring #34726B offset 2 px; pointer cursor	Not interactive: no hover, no pointer, not focusable	Keyboard QA

Other green on screen: the true-profit figure stops being green and uses the normal text colour #061F45. A negative value gets a minus sign plus the risk text colour.

22.4 Health Score bands and verdict chips

Light-only values; band/verdict always includes its word and icon.

Band	Score	Gauge arc	Word/chip
Strong	80–100	#2F8A3A	#2D7A24 on #EDF7E6 (4.86)
Needs attention	50–79	#B26B00	#8A5A00 on #FFF4DB (5.42)
At risk	Below 50	#D0263F	#C21F3E on #FFE8EC (5.06)

Verdict	Tint	Text	Icon	Ratio
Healthy	#EDF7E6	#2D7A24	✓	4.86
Thin	#FFF4DB	#8A5A00	–	5.42
Losing money	#FFE8EC	#C21F3E	↓	5.06
No revenue	#EEF1F6	#475569	∅	6.69

The number is Poppins 700 at 48 px; score includes Confidence High/Medium/Low. True profit uses navy, negative profit uses minus sign and risk colour. Charts use #34726B, #061F45, #64748B, #6D5BD0, #7FC4BA and #AEBBD0 with direct labels and white dividers.

22.5 Tokens (light only)

The approved light tokens are `--mo-bg #F5F7FB`, `--mo-surface #FFFFFF`, `--mo-surface-2 #EEF1F6`, `--mo-border #DCE3EE`, `--mo-border-strong #7A879C`, `--mo-text/--mo-heading/--mo-navy #061F45`, `--mo-text-muted #475569`, `--mo-brand/--mo-action #34726B`, `--mo-brand-tint #E7F7F6`, hover #2B605A, pressed #224C47, link #2B605A. Semantic tokens are strong text #2D7A24 / arc #2F8A3A / tint #EDF7E6; attention #8A5A00 / #B26B00 / #FFF4DB; risk #C21F3E / #D0263F / #FFE8EC; danger #C21F3E; neutral text #475569 / icon #64748B / tint #EEF1F6.

CSS (copy as is):

```
:root {
  --mo-bg: #F5F7FB;
  --mo-surface: #FFFFFF;
  --mo-surface-2: #EEF1F6;
  --mo-border: #DCE3EE;
  --mo-border-strong: #7A879C;
  --mo-text: #061F45;
  --mo-text-muted: #475569;
  --mo-heading: #061F45;
  --mo-navy: #061F45;
  --mo-brand: #34726B;
  --mo-brand-tint: #E7F7F6;
  --mo-action: #34726B;
  --mo-action-hover: #2B605A;
  --mo-action-pressed: #224C47;
  --mo-link: #2B605A;
```

```
  --mo-strong-text: #2D7A24;
  --mo-strong: #2F8A3A;
  --mo-strong-tint: #EDF7E6;
  --mo-attention-text: #8A5A00;
  --mo-attention: #B26B00;
  --mo-attention-tint: #FFF4DB;
  --mo-risk-text: #C21F3E;
  --mo-risk: #D0263F;
  --mo-risk-tint: #FFE8EC;
  --mo-danger: #C21F3E;
  --mo-neutral-text: #475569;
  --mo-neutral: #64748B;
  --mo-neutral-tint: #EEF1F6;
}
```

Type:

- Inter for UI text, with tabular figures for money, % and scores.
- Poppins 600/700 for page titles and the Health Score number.
- Fonts are **self-hosted** (22.11).
- `rem` sizes, with a 16 px body.

Spacing and shape:

- A 4-pt spacing scale.
- Radius 6 / 10 / 16 / pill. Buttons use 10, and only chips and tags use pill.
- Focus ring 3 px, brand teal.
- Tap targets at least 44 × 44 px (15.4).

22.6 Logo, app icon and files

- App icon/favicon: white M on solid #34726B, square, safe area for round masks.
- Header: icon plus the `PRODUCT_NAME` wordmark in navy #061F45; no Free badge or tagline. Phone header icon only, 28 px. The default wordmark is **Margins 365** (K58); keep the current teal lock-up and do not design a new logo.
- Marketing supplies approved teal SVG/PNG/favicon/iOS/Google OAuth assets; navy/blue legacy assets are not used.

22.7 Current interface mapping

- Primary buttons solid #34726B, white text, hover #2B605A, pressed #224C47, radius 10, at least 44 px.
- Links #2B605A underlined; page #F5F7FB, cards white, text #061F45, muted #475569.
- Headline action uses brand tint; product chips and estimate tags are neutral. True profit is normal text, negative uses risk colour and minus sign.
- Health Score/verdicts use 22.4 light colours and words/icons. Charts use the approved teal/navy/slate/violet/light-neutral sequence, direct labels, white dividers, negative hatching and text alternatives.

- Usage chip is neutral with 80% warning; no Free upload counter, locked Pro pop-up, early-bird header price or blurred results.

22.8 PDF report and email branding

PDF report (Growth, Pro and Scale, spec 8 "PDF reports with product branding"):

- A4, always light.
- The teal lock-up (white M on #34726B + navy wordmark), embedded as a vector, 40 mm wide, top-left, with 15 mm margins.
- Title and date range top-right in Inter, navy #061F45.
- A 0.5 pt brand-teal #34726B rule under the header.
- Footer: the value of `PRODUCT_NAME` and page "x of y".
- Verdict chips and band colours as in 22.4, always with their words, so it still reads in black and white.
- Charts as in 22.7, part 9.
- **No slot for a seller logo** (Later).

Emails (16.5: verification, password reset, trial confirmation/reminder using the K43 facts, cancellation with exact account-closure and deletion date and export prompt, deletion confirmation when the wipe runs, retry/update-card and applicable renewal reminders; no founding-price or 60/30-day lapsed-data emails):

- **Layout:** a 600 px single column on #F5F7FB with a white card.
- **Logo:** the teal lock-up PNG (320 px file shown at 160 px, alt text from `PRODUCT_NAME`), hosted on the configured product domain.
- **Text:** 16 px Inter with system fallbacks, in #061F45.
- **Button:** one #34726B button with white text (5.58), radius 10, with the raw link underneath. Links are #2B605A.
- **Link lifetimes:** 24 hours for verification, 1 hour for reset.
- **Footer:** why the user got the email, plus the support address.
- **Content rules:** no marketing; always a plain-text part; checked in dark-mode mail clients.

22.9 Components carrying product rules

- **Usage:** neutral counter “[used] of [limit] orders this billing month”; 80% warning names the next plan; blocked-import panel shows new unique, projected and overage with Upgrade and Cancel.
- **Upgrade:** one contextual component naming the relevant next tier and its concrete capacity/features. No lock placeholders, blurred data, Free badges, early-bird counter or lifetime price line.
- **Sample data:** sample pill/banner in public and account sample experiences.
- **Confirmations:** Start fresh and Clear sample data use Cancel-first confirmation; destructive action #C21F3E.
- **Leak cards:** complete £ impacts on every paid tier, ranked with no summed total.

- **Header:** no PDF icon, no dark-mode toggle, no legacy early-bird button. PDF sits beside results where included.
- **Responsive:** icon-only phone header, bottom-sheet confirmations with Cancel first, no sideways scrolling at 320 px.

22.10 Upgrade line

Use plan configuration: “You've used [used] of [limit] orders this billing month. Upgrade to [next plan] for [next limit] orders and [relevant features].” During a Starter or Growth trial the Keep Pro line in 12.5B may sit beside this. Never say “No subscription”, “yours for life” or imply that an over-limit upload partly imported, or that a Starter or Growth trial will be billed at the Pro price unless the owner chose Pro or used Keep Pro.

22.11 Brand wording rules

- Approved public lines are used word for word (section 2, Features doc). Trial, cancellation and CTA strings follow 12.5A and 15.4.
- The branding doc's suggested UI strings are default copy (K20): Design may shorten them without changing facts; any change of fact needs Akthar.
- Health Score intro, one wording everywhere: "Parts without the data they need are left out, and the rest are scaled to add up to 100." (12.1).
- Sentence case for labels; prefer full stops or commas to em dashes.
- Fonts are self-hosted; the app makes no requests to third-party font or script servers (12.6).
- Revised Brand Guidelines and Product Branding Recommendations PDFs from the Marketing & Content Agent are reconciled against this section before use (QA-14); until then the navy/blue files in `brand/` are superseded.

22.12 Acceptance and QA

1. All app colours use the approved light `--mo-*` tokens; no blue and no dark theme/toggle remains.
2. Buttons and Healthy/Strong chips retain K21 hue, fill, word/icon, shape and keyboard differences; greyscale check at 320 px and PC.
3. Semantic green/amber/red appear only for results/warnings/errors with text and icons. Brand teal never marks a result.
4. Text/graphics/focus pass WCAG 2.2 AA in light mode. PDF and emails retain their separate checks, including dark-mode mail-client rendering.
5. Header/favicons use teal M assets; no tagline, Free badge or retired price/lifetime copy.
6. PDF is always light, beside results on included tiers, with teal lock-up and readable verdicts in black-and-white printing.
7. Usage counter, 80% warning, blocked-import message and Upgrade component match 12.4 and never blur results.
8. Built-app text search finds no Free countdown/upload allowance, early-bird counter, founding / first-100 / 25%-off offer, Support target or published support SLA, mixed “Start trial” / “Start free trial” primaries, “Card required. Cancel before day 14 to pay nothing.” as a lead phrase,

invitations to email or reply in order to cancel, “yours for life” or “No subscription”. Until the K53 restore gate, public TikTok copy is the coming-soon line and must not include export instructions or a working-looking upload; after that gate, a lingering public “coming soon” TikTok promise must not remain.

9. Charts retain approved non-semantic colours, direct labels, negative hatching and text alternatives.

Appendix A. Change history

Version	Date	Status	What changed
v13–v17.1	to 31 Oct 2026	Previously approved	Original calculations, CSV imports, privacy, DigitalOcean hosting, lifetime Pro/Free model, devices and brand. Source history remains in v17.1 Appendix A.
v18 DRAFT	5 Nov 2026	Superseded; retained unchanged for audit	Four tiers, hard limits, TikTok Beta, subscriptions, UX and brand changes. Initial no-trial and 12-month lapsed-retention decisions were later replaced.
v18 FINAL	**5 Nov 2026, 14:18 Europe/Madrid**	**Approved by Akthar**	All approved draft content plus 14-day card-required trials on every tier, automatic day-15 charging, cancellation warnings/export and all-product-data deletion at access end. Open items have non-approved implementation defaults. Calculation core unchanged.
v18.1 DRAFT	6 Nov 2026, Europe/Madrid	Superseded; retained unchanged for audit	Draft of K41–K50 and the flagged OD9/Q31 email-closure question.
v18.1 FINAL	**6 Nov 2026, 00:44 Europe/Madrid**	**Approved by Akthar**	K41–K51: remove Support target/SLAs; remove founding offer; approved trial banner and Option 1 strings with no email cancel; homepage file and how-to help; stronger phone and tablet/iPad acceptance; one primary CTA; Shops and Seats explanations; layout and scaling rules; homepage Product section copy; in-platform owner-only cancellation; no retention offer; access until trial or paid-period end then wipe; cancel also closes the account, with no email-closure workflow and a GDPR contact in the privacy policy only (K51, supersedes K29 email closure). Post-launch candidates listed, not in scope. Calculation core unchanged.
v18.1	**6 Nov**	**Approved by**	Reverse trial folded into v18.1 FINAL: Starter, Growth and Pro

Version	Date	Status	What changed
FINAL + K52	**2026, 01:05 Europe/Madrid**	**Akthar**	trials receive full Pro features and Pro's 5,000-order limit; Scale trials receive Scale; day 15 charges the chosen plan; in-app Pro banner, label and Keep Pro; conversion locks extras rather than deleting them; order-limit overrun keeps existing results visible; reminder lists features that will lock, overrun, Keep Pro and in-platform cancel. Public K43 banner unchanged. Calculation core unchanged.
v18.1 FINAL + K53	**6 Nov 2026, 12:49 Europe/Madrid**	**Approved by Akthar**	Soften public TikTok copy to "TikTok Shop UK (Beta): Excel import coming soon" until the reader is built and tested. No public export instructions; no upload option or chip that implies it works; TikTok is not a usable platform slot until the restore gate (S47). Importer requirements stay P1. Platform-count display meanwhile is Q32 (recommended default: 1 of 3 / up to 2 of 3 / all 3, plus the coming-soon line). Calculation core unchanged.
v18.1 FINAL + K54	**6 Nov 2026, 12:54 Europe/Madrid**	**Approved by Akthar**	Homepage, sample-report and pricing test updates: centre the hero white card, Product section and Get Started (directly under Tools); (i) icons instead of "?"; centred Sample report opening plus green Open Sample Shop K46 exception; Most Popular moves to Pro; expanded public comparison (3.1); five Pricing FAQ answers (3.2); differentiation line; mobile readability after centring; Q33 Suggest a feature default. Calculation core unchanged.
v18.1 FINAL + K55	**6 Nov 2026, 13:40 Europe/Madrid**	**Approved by Akthar**	Withdraw the K54 hero equal-spacing rule (restore pre-K54 / K48 hero scaling; retire S48). Product headline becomes "See where your profit is leaking." Replace the Sample report opening-section trial button with Open Sample Shop and keep the K54 bottom button (two on the page; header trial CTA stays). Restore the Pro tile badge "Command centre" above Most Popular. Remove the live "Email support" comparison row and any (i) on Shops/Seats (plain sub-text + FAQ). Add seats, shops and further support-reducing FAQ answers. Calculation core unchanged.
v18.1 FINAL + K56	**6 Nov 2026, 14:20 Europe/Madrid**	**Approved by Akthar**	Homepage differentiation line: until the K53 restore gate (S47) use "Built for single or multi-platform sellers (Shopify, Amazon, Etsy, TikTok coming soon)." After S47, use exactly "Built for single or multi-platform sellers (Shopify, Amazon, Etsy, Tik-Tok)." S51 updated. The FAQ "Do you connect to my store?"

Version	Date	Status	What changed
			still says no 3PL integration is required. Calculation core unchanged.
v18.1 FINAL + K57	**6 Nov 2026, 16:10 Europe/Madrid**	**Approved by Akthar**	Google sign-in is enabled; email and password sign-in stays. Password reset: Forgot password? under the password field; Enter your email form; SES reset link; secure time-limited reset page; neutral “If an account exists, we’ve sent a reset link”; Q34 defaults (60-minute single-use link, invalidate older links, rate limits, Google-only Continue with Google email). Calculation core unchanged.
v18.1 FINAL + K58	**6 Nov 2026, 17:59 Europe/Madrid**	**Approved by Akthar**	User-facing name is **Margins 365**; target domain is **margins365.com**. Supersedes K37 / OD3 working-name and MarginSeam candidacy. Live marginos.online and existing SES identities remain until the 20.5 cutover. Trademark clearance is not implied; no new mailboxes invented; current logo/colours stay. Calculation core unchanged.
v17 label (not operative)	6 Nov 2026, 18:05 Europe/Madrid	Corrected at 18:12	An instruction at 18:05 asked to label this content version 17. Akthar corrected that at 18:12: the intended version is 19. The version 17 label is not operative and does not restore historical v17 or v17.1 content.
v19	**6 Nov 2026, 18:12 Europe/Madrid**	**Approved by Akthar**	Current full content labeled version 19, correcting the 18:05 “version 17” instruction. This is the FINAL v18.1 handover (K41–K58, including the Margins 365 rename), not a restore of historical v17 or v17.1 product content. Calculation core unchanged.

Appendix B. Decisions log (K1–K58)

Earlier K1–K21 are retained except where listed below. K9/K14–K16 remain retired with Free; K13 reversed (light only); K17/K19 retired with lifetime positioning; K18 reversed for TikTok Beta. K35 is replaced by K38. K31's 12-month retention and K8/K10/K11 retention treatment are replaced by K39. K5 is changed by K36: SES Stockholm is approved. K12/K20/K21 and section 22 light brand rules remain.

ID	Decision	Date	Status / sections
K22	No Free plan; four tiers £39/£79/£129/£199 inc VAT, annual 10×, Growth Most popular; founding first 100	5 Nov	**Approved except the founding offer, which K42**

ID	Decision	Date	Status / sections
	accounts 25% off monthly for 12 months; lifetime/early-bird retired, sold lifetime licences honoured	2026	**removes, and except Most popular, which K54 moves to Pro**; 2, 3, 7, 8, 12.5
K23	Hard monthly unique-order limits 500/2,000/5,000/15,000; dedupe, monthly reset, 80% notice/email, atomic full-upload block, overage + Upgrade, immediate prorated upgrade, existing results visible while entitled	5 Nov 2026	**Approved**; 12.4, 12.4A
K24	Tier features/history/shops/platforms/seats per approved tier table; operational seat/multi-shop details open	5 Nov 2026	**Approved table**; 3, 8, front defaults
K25	TikTok Shop UK XLSX import on every tier as Beta using public Finance Report Guide, actual/creator fees, reconciliation, estimates/lower confidence and report route; no real file supplied	5 Nov 2026	**Approved**; importer remains P1; public promise paused by K53 until the restore gate; 9, 16.1; reverses K18
K26	Remove dark mode; light-only app. Email dark-client checks remain	5 Nov 2026	**Approved**; 15, 22; reverses K13
K27	Remove header PDF icon; Download report PDF beside results on Growth/Pro/Scale	5 Nov 2026	**Approved**; 8, 15, 22
K28	Google sign-in first plus email sign-in; passwordless code+link separate recommendation OD8	5 Nov 2026	**Approved direction**; 5, 16.5
K29	No Delete account UI; verified email-request closure within 7 days; Download my data stays	5 Nov 2026	**Email-request closure superseded by K51**; no Delete account button remains; 5, 12.6, 18
K30	Real public pages, pricing comparison/toggle, guided sample onboarding, ranked-fix dashboard, contextual limits, three settings sections and responsive journeys	5 Nov 2026	**Approved**; 5, 10, 15
K31	Stripe Managed Payments, portal cancellation, first-payment refund and 14-day retries; original 12-month lapsed retention/warnings	5 Nov 2026	**Approved except retention part replaced by K39**; 12.5, 12.6
K32	Retire Free-only and new lifetime sale logic; preserve	5 Nov	**Approved**; 7, 12

ID	Decision	Date	Status / sections
	formulas/leaks/Health Score and add regression/subscription tests	2026	
K33	Initial no-trial/SES/card wording/name questions	5 Nov 2026	**Historical; SES approved K36, no-trial replaced K38, name K37/OD3 superseded by K58, card OD4**
K34	Section 22 remains except dark-mode and retired Free/lifetime UI items	5 Nov 2026	**Approved scope clarification**; 22
K35	No free trial; public sample report and signed-in sample shop only	5 Nov 2026, 13:31 Europe/Madrid	**Replaced by K38; samples remain**
K36	Keep Amazon SES Stockholm eu-north-1; emails processed EU (Stockholm), app/database data DigitalOcean London	5 Nov 2026, 13:31 Europe/Madrid	**Approved**; 12.6, 16.5, 20.4
K37	MarginOS cannot be used; rename after clearance and update every user-facing string/domain/section 22 item	5 Nov 2026, 13:31 Europe/Madrid	**Superseded by K58** (user-facing name is now **Margins 365**; target domain **margins365.com**; MarginSeam is no longer the candidate); front, 20, 20.5, 22
K38	**14-day free trial on every monthly/annual tier. Card required via Stripe Checkout/Managed Payments; selected-tier features/limit; automatic charge day 15 unless cancelled; portal cancellation with no charge; one trial/account; pre-trial reminder; samples stay. Conversion is first payment for refund; post-trial refund applicability to legal. K43 refines wording and the cancel journey only; K42 removes the former founding counter; K51 closes the account on**	**5 Nov 2026, 14:18 Europe/Madrid**	**Approved; replaces K35**; 3, 7, 12.5, 12.5A, 12.10–12.11. Card-level trial prevention and 3-day reminder are defaults, not approvals

ID	Decision	Date	Status / sections
	cancel; K52 sets trial entitlement to Pro (or Scale) while day 15 still charges the chosen plan.		
K39	**When subscription access ends (paid/trial cancellation, final failed payment or immediate first-payment refund), wipe all product/user data. Paid/trial cancellation warns with exact deletion date and export; backup removal within 7 days. Login may remain for fresh resubscription; no old data restored. Update privacy.**	**5 Nov 2026, 14:18 Europe/ Madrid**	**Approved; replaces 12-month retention in K31**; login-may-remain after cancel superseded by K51; access until trial or paid-period end then wipe is approved; 12.6, 12.10–12.12, 18–19
K40	**Approve the v18 drafts as final except unresolved OD/Q items; permit build with labelled recommended defaults behind config. MarginSeam is a candidate pending trademark clearance; product name must use one config value.**	**5 Nov 2026, 14:18 Europe/ Madrid**	**Approved final handoff**; the MarginSeam-candidate wording is superseded by K58; one `PRODUCT_NAME` config value remains, now default **Margins 365**; front, 14, 20–22
K41	**Remove the Support target row and all customer-facing support SLAs / response-time / “priority + onboarding” promises. Every plan includes email support with no published response-time target. Internal Stripe 48-hour escalation remains a merchant duty, not a customer SLA.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; 3, 5, 8, 10, 15
K42	**Remove the founding offer (25% off monthly for the first 100 paying accounts for 12 months) everywhere. Published prices only. Q26 withdrawn.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; 3, 7, 12.5, 12.11, 16.4, 16.5, 20
K43	**Trial wording and easy-cancel flow. Banner approved 6 Nov 2026, 00:34 Europe/Madrid, word for word: “14 days free. Cancel before day 14 and pay nothing. From £39/mo”. Supersedes the 00:31 banner, now history. Other Option 1 strings approved (pricing card, Checkout card/amount/date/in-platform-cancel disclosure, Plan & billing line), with no email cancel. Options 2 and 3 retired to history. No retention offer at**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; banner first approved 00:34; remainder approved 00:44; 3, 7, 12.5, 12.5A, 12.11

ID	Decision	Date	Status / sections
	launch. Access continues until the original trial or paid-period end, then data is wiped. Does not change K38 commercial terms.		
K44	**Homepage “What files do I need?” and “How to use this platform” using the copy in 17.5, tap-to-open on phone and tablet.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; TikTok paragraph in 17.5 amended by K53 until the restore gate; 10.1, 17.5
K45	**Strengthen phone and tablet/iPad acceptance: comparison table behaviour, sticky banner not covering content, 44 px targets, iPad portrait and landscape, required device checks.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; 15.3
K46	**One primary CTA per signed-out marketing screen, labelled exactly “Start 14-day free trial”. Secondary actions are quieter. Pricing banner states terms without a second button; header scrolls to plans.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; K54 moves the Pricing header focus to Pro (Most popular) and allows the Sample report Open Sample Shop green exception; K55 also allows two Open Sample Shop buttons on Sample report (opening section and dashboard bottom) while the header primary stays; 10.1, 15.4
K47	**Explain Shops and Seats in plain language on the comparison table via tap-friendly help, using the sentences in section 3.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; 3, 10.1, 15.3
K48	**Measurable layout and scaling rules for phone, iPad portrait, iPad landscape, laptop and large desktop: minimum type sizes, 44 px targets, content-width and composition rules, hero image scaling with the content, no large one-sided empty regions, no zoomed-out page, and a mandatory pre-release screenshot matrix of**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; 10.1, 15.5

ID	Decision	Date	Status / sections
	every page at those sizes.		
K49	**Rewrite the homepage Product section: outcome-led headline “See where your profit is leaking, in pounds”; one result line per card; jargon moved to tap-friendly tooltips; remove “Paid plans unlock the full score breakdown”; one clearly labelled sample proof number (£840 a month from the existing sample). Name Growth, Pro and Scale on the scenarios and PDF card.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; K55 amends the headline to “See where your profit is leaking.”; 17.6
K50	**Cancellation of a trial or paid subscription is in-platform only, by the account holder (owner role, not other seats), from Plan & billing. No cancel-by-email route anywhere. Help, FAQ, Refunds & cancellation, Contact and support pages must not offer email cancellation. Automated outbound trial-reminder and cancellation-confirmation emails stay; the reminder’s cancel link opens Plan & billing.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved**; 5, 7, 10.1, 12.5A, 12.11
K51	**Cancelling in-platform also closes the account. Access continues until the original trial or paid-period end; at that end product data is wiped and the login is removed. There is no email-closure workflow and no Delete account button. A GDPR / privacy contact address stays in the privacy policy only. This supersedes K29’s email-request closure. Download my data remains available until access end.**	**6 Nov 2026, 00:44 Europe/ Madrid**	**Approved; supersedes K29 email closure**; 5, 12.5A, 12.6, 12.12, 18
K52	**Reverse trial. Starter, Growth and Pro trials receive full Pro features and Pro’s 5,000 unique-order limit; Scale trials receive Scale. Day 15 charges the chosen plan’s price, not Pro, unless the owner chose Pro or used Keep Pro. Checkout must state this clearly. A persistent in-app banner, Pro label and secondary Keep Pro action (same trial end date; no new trial) apply while trialling. On conversion, extras beyond the chosen plan lock rather than delete; upgrading restores them immediately. K39 wipe does not**	**6 Nov 2026, 01:05 Europe/ Madrid**	**Approved**; 3, 5, 7, 10, 12.4, 12.5, 12.5A, 12.5B, 12.10–12.12, 16.4–16.5

ID	Decision	Date	Status / sections
	run on conversion. Trial unique-order usage that exceeds the chosen plan's limit leaves existing results visible and blocks new unique uploads until upgrade or the next billing month. The reminder lists features that will lock, any overrun warning, charge amount and date, Keep Pro and the in-platform cancel link. Pricing may note "Every trial includes Pro features"; the public K43 banner is unchanged. Trial entitlement (Pro or Scale) is stored separately from the chosen plan.		
K53	**Soften public TikTok help to "TikTok Shop UK (Beta): Excel import coming soon" until the reader is built and tested. No public export instructions; no upload option or platform chip that implies TikTok works. TikTok does not count toward usable platform allowances until it ships. Keep the 9.1 / 16.1 importer requirements as a P1 build item. Restore the previous public Beta copy only after the reader passes its acceptance tests (S47). How platform-count rows read meanwhile is flagged (Q32) with recommended default 1 of 3 / up to 2 of 3 / all 3 plus the coming-soon line, or "3 platforms + TikTok coming soon" as a short catalogue phrase.**	**6 Nov 2026, 12:49 Europe/ Madrid**	**Approved**; 2, 3, 6, 8, 9, 9.1A, 10.1, 17.5, 12.11, 16.1, 22
K54	**Homepage, sample-report and pricing updates from testing. Centre the hero white card in the green panel with equal spacing; centre the Product section and replace title "?" with an (i) one space after each title; move Get Started (the two 17.5 questions) directly under Tools and centre it. Centre the Sample report opening section; add a centred Open Sample Shop button in #34726B at the bottom of the first dashboard section as a secondary-but-green K46 exception. Move Most Popular from Growth to Pro on every tile and focus Pro from the Pricing header CTA. Expand the public comparison to the 3.1 matrix (no invented features; no Support target). Remove "?" from Shops and Seats (keep K47;**	**6 Nov 2026, 12:54 Europe/ Madrid**	**Approved**; K55 withdraws the hero equal-spacing rule and the recommended (i) on Shops/Seats, and amends the Sample report CTA treatment; K56 replaces the homepage differentiation line; 3, 3.1, 3.2, 10.1, 15.4, 15.5, 17.6, 17.7, 12.11

ID	Decision	Date	Status / sections
	recommended (i)). Add the five Pricing FAQ answers in 3.2. Include the homepage line “Built for multi-platform sellers (Shopify, Amazon, Etsy). No 3PL integration required.” Sample card and ranked leaks stay readable on phone and iPad after centring. Suggest a feature form is the labelled default (Q33).		
K55	**Hero revert, Product headline, Sample report CTAs, Pro Command centre badge and FAQ expansion. Withdraw the K54 “white card perfectly centred with equal spacing” hero rule and retire S48; hero follows pre-K54 / K48 scaling (flag: that K54 rule conflicted with K48’s no-floating-card rule). Headline becomes “See where your profit is leaking.” On Sample report, replace the opening-section “Start 14-day free trial” button with Open Sample Shop and keep the K54 dashboard-bottom button — two Open Sample Shop buttons, header primary stays (K46 exception). Restore the exact pre-K54 Pro tile badge “Command centre” above Most Popular. Remove the live “Email support” comparison row (Yes on every plan) and any (i) or “?” on Shops/Seats; K47 stays as plain sub-text plus FAQ. Add “What are seats?”, “What are shops?” and five further support-reducing FAQ answers.**	**6 Nov 2026, 13:40 Europe/ Madrid**	**Approved**; 3, 3.1, 3.2, 10.1, 15.4, 15.5, 17.6, 17.7, 12.11
K56	**Change the homepage differentiation line. Until the K53 restore gate (S47) it is “Built for single or multi-platform sellers (Shopify, Amazon, Etsy, TikTok coming soon).” After S47 it is exactly Akthar’s wording: “Built for single or multi-platform sellers (Shopify, Amazon, Etsy, Tik-Tok).” Replaces the K54 line “Built for multi-platform sellers (Shopify, Amazon, Etsy). No 3PL integration required.” The FAQ answer “Do you connect to my store?” still says no 3PL integration is required.**	**6 Nov 2026, 14:20 Europe/ Madrid**	**Approved**; 17.7, 12.11
K57	**Google sign-in is enabled; email and password sign-in stays. Add a password reset flow: Forgot**	**6 Nov 2026,**	**Approved**; 5, 5.1, 10.1, 15.2,

ID	Decision	Date	Status / sections
	password? under the password field; an Enter your email form that sends a reset link through SES (eu-north-1); a secure time-limited reset page; clear success and error messages with no account enumeration (“If an account exists, we’ve sent a reset link”). Defaults behind config (Q34): 60-minute expiry; single use; a new request invalidates older links; 3 requests per email and 10 per IP per 60 minutes; same password rules as sign-up; all other sessions signed out after a reset; confirmation email “Your password was changed”; Google-only accounts get the same on-screen message and a recommended-default email to use Continue with Google (no set-password link); expired or used links offer Send a new link; works on phone and iPad (K48); not a cancellation route (K50).	**16:10 Europe/ Madrid**	15.4, 16.5, 20.3, 12.11
K58	*The user-facing business and product name is Margins 365 (exactly that spelling and spacing). The secured target public domain is margins365.com. This supersedes K37’s open working-name status and the MarginSeam candidacy in OD3. Every user-facing name uses the single* `PRODUCT_NAME` *config value, now defaulting to Margins 365. Document-only: not a DNS, deployment or repository rename. Until a verified cutover, live public hosting remains marginos.online and transactional email continues to use the existing SES identities. Distinguish target domain from current live infrastructure. Do not invent support or privacy email addresses. Do not imply that margins365.com is already configured or that the name is trademark-cleared. Preserve current logo and colours; do not design a new logo. Repository identifiers (historical MarginOS- brief filenames, CSS tokens such as* `--mo-*`*, live code paths) stay unchanged. Developers follow the 20.5 cutover checklist (brand/domain URLs, Google OAuth allowed origins/redirects, SES verification/DKIM/DMARC/MAIL FROM, Stripe and public callback URLs, links and metadata) and verify before switching public traffic.**	**6 Nov 2026, 17:59 Europe/ Madrid**	**Approved**; supersedes K37 and OD3 name/target domain; front, 2, 5.1, 6, 11, 12.9, 15.4, 16, 17.3, 17.7, 20.3–20.5, 21, 22, 12.11

Final approval of v18: Akthar Uddin approved v18 on 5 November 2026 at 14:18 Europe/Madrid. **Final approval of v18.1:** Akthar Uddin approved K41–K51, including the listed defaults, on 6 November 2026 at 00:44 Europe/Madrid, and approved the reverse trial as **K52** on 6 November 2026 at 01:05 Europe/Madrid, and approved the TikTok public-copy softening as **K53** on 6 November 2026 at 12:49 Europe/Madrid, and approved the homepage, sample-report and pricing test updates as **K54** on 6 November 2026 at 12:54 Europe/Madrid, and approved the hero revert, Product headline, Sample report CTAs, Command centre badge and FAQ expansion as **K55** on 6 November 2026 at 13:40 Europe/Madrid, and approved the homepage differentiation-line change as **K56** on 6 November 2026 at 14:20 Europe/Madrid, and approved password reset and the enabled Google sign-in as **K57** on 6 November 2026 at 16:10 Europe/Madrid, and approved the rename to **Margins 365** and the target domain **margins365.com** as **K58** on 6 November 2026 at 17:59 Europe/Madrid. The unresolved defaults in the front table are not individual approvals (K40). On 6 November 2026 at 18:05 Europe/Madrid an instruction asked that this content be labeled version 17; at 18:12 Europe/Madrid Akthar corrected that to **version 19**. The version 17 label is not operative. That label does not restore historical v17 or v17.1 content.
