MarginOS spec v18.1 — Changes from v18 FINAL

Status: FINAL — approved by Akthar Uddin, 6 November 2026 at 00:44 Europe/Madrid, with K52 (reverse trial) approved at 01:05 Europe/Madrid.

Date: 6 November 2026, Europe/Madrid.

Source: Akthar's live testing notes on the pricing page at marginos.online (screenshot of the iPad comparison table, about 00:06 Europe/Madrid), followed by the 6 November approvals listed below.

This note records approved decisions **K41–K52**. The K43 banner wording was first approved at 00:34 Europe/Madrid; K41–K51, including the listed defaults, were approved at 00:44; the reverse trial was approved as **K52** at 01:05. It does **not** change any calculation, Health Score or leak formula (sections 12.0–12.3 stay as approved). It does **not** change the commercial trial terms already approved as **K38** (14 days free on every tier, card collected up front, automatic charge on day 15 unless cancelled) or **K39** (product data wiped when subscription access ends, with a dated warning and export), except that **K51** changes what happens to the account after cancel, and **K52** sets trial entitlement to Pro (or Scale) while day 15 still charges the chosen plan.

The companion `/workspace/MarginOS-Spec-v18.1.md` folds these decisions into the full spec. A matching Marketing companion is at `/workspace/MarginOS-Features-v18.1.md`. The earlier DRAFT files are retained unchanged for audit.

How to read this

Each item gives **Current**, the **Approved change**, **Why**, and the **Approved decision**. Open defaults that were not part of this approval list (one trial per card, 3-day reminder timing, OD7 and the other v18 open table entries) stay as labelled defaults behind config, per K40.

Research used for the trial wording

The live banner currently says: "14-day free trial · Card required · Cancel before day 14 to pay nothing · from £39/mo", with **Start trial** in the banner and **Start free trial** in the header.

That line is legally clear, but it leads with the catch and sounds like a warning. Larger products that also collect a card for a converting trial tend to lead with the opposite idea — *you are not charged today* — and then calmly say what happens next:

- **Microsoft 365** (card required, auto-converts): "Your credit card won't be charged until the end of the trial period. Cancel online any time during the trial period without penalty." It

explains the card as a way to avoid service interruption, not as a threat.
- **Google Workspace, Canva Pro and Adobe Creative Cloud** follow the same pattern: the trial is free now; billing starts when it ends unless you cancel; cancel during the trial and you are not charged.

Honesty still requires saying that a card is collected. Hiding that until the last checkout step would be a dark pattern. The approved public banner does not name the card; the approved Checkout disclosure still must say that a card is collected, the exact charge amount and date, and that cancellation is in-platform from Plan & billing.

UK subscription rules from 1 January 2027 (Digital Markets, Competition and Consumers Act 2024, and the draft Consumer Subscription Contracts (Cancellation and Information) Regulations 2026) will require, for new contracts from that date:

1. **Clear pre-contract information** before sign-up: that the contract continues or renews automatically, the amount and frequency of payments, the minimum the customer may have to pay, and how and when they can end it. This must be prominent, not buried in terms.
2. **A reminder** before a free or discounted trial becomes a paid subscription, on a durable medium (email counts; a disappearing pop-up does not). The reminder must state the amount, the charge date and how to cancel, and give enough time to act.
3. **Easy cancellation.** If the customer signed up online, they must be able to cancel online. An email address on its own is generally not enough under those rules — and Akthar has now said cancellation must happen on the platform, by the account holder, with no email cancel route for him to process (K50). Extra steps, phone-only cancel, or a questionnaire that hides the confirm button are not allowed. A retention offer is allowed only if it is optional and does not obstruct or delay cancellation.
4. **Written confirmation** of cancellation on a durable medium.
5. A **further 14-day cooling-off** may apply when a trial converts to a paid plan, and when a contract of 12 months or more renews. What that means for refunds after our trial remains with legal review (**OD7**). Failure to give the required information or reminders can itself create extra cancellation rights.

Building the clearer wording, the reminder, the one-click cancel route and the confirmation email now does two jobs at once: it matches what Akthar asked for after testing, and it puts the product on the path the 2027 rules will require. Legal still reviews final 2027 wording and refund-after-trial (already OD7).

---

1. Remove the Support target row — K41 (approved)

Current

The live Full comparison table ends with **Support target**: Starter 2 working days; Growth 1 working day; Pro Priority; Scale Priority + onboarding.

The same promise appears in the v18 spec (section 5 and the section 8 feature table), the v18 Features matrix, and would appear in any FAQ that repeats the comparison.

Approved change

Remove the **Support target** row from the public comparison table, pricing cards, FAQ and marketing claims.

Remove the matching customer-facing promises from the spec: no published response-time target, no “priority email” SLA, and no “priority + onboarding” as a plan differentiator.

Every plan still includes **email support**. The comparison table simply stops claiming different speeds.

The internal Stripe rule stays: escalations from Stripe/Link are answered within 48 hours. That is a merchant duty, not a published customer SLA.

Why

Akthar asked to remove the line after testing the live table. Publishing response-time targets without a staffed support process is a product and legal risk. Support speed is not what sells the diagnosis, and the rest of the table already explains the real differences (orders, platforms, shops, history, seats, overheads, tax, scenarios, PDF).

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K41: remove the row **and** all customer-facing support SLAs / response-time / “priority + onboarding” promises.

---

2. Remove the founding discount — K42 (approved)

Current

The first 100 successfully paying accounts receive 25% off the monthly price for 12 months: £29.25 / £59.25 / £96.75 / £149.25. Trial sign-up does not count; successful conversion does. Annual treatment of that discount was still open (Q26).

Approved change

Remove the founding offer everywhere: spec, Features, pricing copy, Stripe setup, emails, tests and launch checklist. Every paying account is charged the published price (£39 / £79 / £129 / £199 monthly, or the matching annual price). Q26 is withdrawn. No founding counter, no founding-price-end email, no public scarcity claim.

Lifetime licences already sold remain honoured (unchanged from K22).

Why

Akthar asked to remove the discount for the first 100. The published prices are already the commercial offer. A temporary 25% scheme adds billing complexity and a public countdown we no longer want.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K42: remove the founding offer everywhere.

---

3. Smarter trial wording and easier cancellation — K43 (approved)

K38 stays: 14 days free, card collected up front, selected-tier features and order limit, automatic charge on day 15 unless cancelled, one trial per account, reminder before the end, samples stay.

K39 stays: when access ends, product data is wiped, with a dated warning and Download my data.

What changes is **how we say it** and **how cancellation works**.

Current wording (retire as the lead phrase)

“Card required. Cancel before day 14 to pay nothing.”

The same idea, or close variants, must be replaced everywhere it appears: sticky banner, header, pricing cards, Checkout, trial confirmation email, reminder email, Plan & billing, FAQ, Help, Terms/Refunds references, and in-app empty states.

Approved banner wording

Approved by Akthar Uddin, 6 November 2026 at 00:34 Europe/Madrid. This is the banner line, word for word:

> 14 days free. Cancel before day 14 and pay nothing. From £39/mo

That string is no longer a proposal. Use it on the sticky trial banner and anywhere the same short line appears. It supersedes the 00:31 wording.

A request to say “You won’t be charged” was flagged as misleading, because a card is collected and a charge follows on day 15 unless the customer cancels. Akthar then chose the line above, which states the condition: cancel before day 14 and pay nothing.

The rest of the Option 1 set is approved (6 November 2026, 00:44 Europe/Madrid). Checkout does not offer email cancellation (K50):

Primary button, everywhere (K46):

> Start 14-day free trial

Pricing card (K43):

> 14 days free, then £[price] a month including VAT. You won’t be charged until [date]. Cancel any time before then in one click.

Checkout, before the card is submitted (K43, K50):

> Your 14-day free trial of [plan] starts today. We’ll ask for a card now so your plan can continue after the trial if you keep it. You pay nothing today. Unless you cancel, we will automatically charge £[amount] including VAT on [date] for your [monthly or annual] [plan] plan. Cancel any time before [date] in Plan & billing — it takes one click. We’ll email you a reminder before you’re charged.

Plan & billing, during the trial (K43):

> Your trial ends on [date]. You won’t be charged if you cancel before then.

The Checkout mention of emailing a reminder is an automated outbound system email, not a way to cancel.

History: earlier banner and options not used

- **00:31 approval, superseded at 00:34.** “14 days free. We’ll ask for a card — you won’t be charged today. Cancel any time before day 14. From £39/mo”
- Unqualified “You won’t be charged” language was flagged as misleading (a card is collected; unless the customer cancels, they are charged on day 15) and was not used.
- **Option 2 — reminder-led, not chosen.** Banner: “14 days free, then from £39/mo. We’ll remind you before you’re charged. Cancel in one click any time before day 14.”
- **Option 3 — closer to the old line, not chosen.** Banner: “14-day free trial. A card is needed to start; you pay nothing today. Cancel before day 14 to avoid the charge. From £39/mo”

Approved easy-cancel flow (product requirements, not UI design)

1. **In-app, one clearly labelled action.** Plan & billing shows **Cancel trial** during a trial and **Cancel subscription** when paid. It is visible, not buried. Only the account holder (owner role) can use it; member seats cannot cancel or change billing.
2. **Stripe** remains the billing engine. Cards, invoices and payment updates can still be managed from Plan & billing. The labelled cancel action the customer uses is in Plan & billing, so the warning, export prompt and confirmation still run (refined by K50).
3. **No cancellation by email.** Do not offer email, phone or support-ticket cancellation anywhere. Help, FAQ, Refunds & cancellation, Contact and other support pages must not tell the customer to email to cancel. A reminder email may link to Plan & billing so the owner can cancel in-platform; that is not email cancellation. Automated outbound trial-reminder and cancellation-confirmation emails stay (K50).

4. **No retention maze.** No multi-step questionnaire, no phone-only cancel, no extra pages whose purpose is to hide Confirm. One confirmation screen is enough.
5. **No retention offer at launch (approved).** If a later approval adds one, it must stay skippable and must not hide Confirm.
6. **The confirmation screen states the consequences before the customer confirms:** - Trial: “You will not be charged. You keep access until [exact date and time]. Your account will be closed and your data will be permanently deleted on [that same date and time]. Download your data before then. This cannot be undone.” - Paid: “Your subscription will not renew. You keep access until [exact date and time]. Your account will be closed and your data will be permanently deleted on [that same date and time]. Download your data before then. This cannot be undone.” - **Download my data** is shown prominently. - Two actions only: **Confirm cancel** and **Go back**. Go back is the safe default.
7. **Reminder email** before day 14 (recommended default remains 3 days before, already in v18). This is an automated outbound system email, not a request for Akthar to handle a cancellation. Subject line makes the purpose obvious, for example “Reminder: your [plan] trial ends on [date] — you’ll be charged £[amount] unless you cancel”. The email states the plan, amount, exact charge date and a link that opens Plan & billing so the owner can cancel in-platform. That information is more prominent than any marketing in the same email.
8. **Exact charge date** is shown at Checkout, in the trial confirmation email, in Plan & billing, and in the reminder, in the account’s time zone.
9. **Confirmation email** after cancel, on a durable medium, repeating the access-end date, that the account will be closed, the deletion date, that there is no charge (trial) or no renewal (paid), and the export link.
10. Late or replayed Stripe events cannot charge a trial that was cancelled in time, and cannot bring deleted data back (already in v18).

Approved decisions inside K43

Wording set

- **Approved (6 Nov 2026, 00:34 Europe/Madrid):** the banner line above. The 00:31 wording is history.
- **Approved (6 Nov 2026, 00:44 Europe/Madrid):** the other Option 1 strings (primary button, pricing card, Checkout disclosure, Plan & billing line), with no email cancel. Options 2 and 3 are history only.

Retention offer

- **Approved:** no retention offer at launch, for trial or paid cancellation.

When access ends, and therefore when data is wiped (K39), and the account is closed (K51)

- **Approved:** after a trial is cancelled, the customer keeps access and export until the original trial end; then the account is closed and the data is wiped. After a paid plan is cancelled, they

keep access and export until the paid period ends; then the account is closed and the data is wiped. The dates on the confirmation screen and email must match this.

---

4. Onboarding clarity — K44 (approved)

Current

Home explains the diagnosis, platforms, prices and sample report. Guided in-app onboarding remains: sample shop → choose plan → add shop → upload → add costs → review import → first results. There is no short public answer to “What files do I need?” or “How to use this platform?”.

Approved change

Add both to the signed-out homepage. They must work with a tap (expandable, disclosure or inline steps), not hover-only, because the pricing page was reviewed on an iPad.

What files do I need?

The four launch platforms are Shopify, Amazon, Etsy and TikTok Shop UK — Beta. eBay is not a launch platform.

Approved copy:

> You upload reports you already download from your sales platforms. We never connect to your store.
>
> **Shopify.** In Shopify Admin go to Orders → Export and download the Orders CSV. For actual payment fees, also download your Shopify Payments transactions CSV (optional).
>
> **Amazon.** In Seller Central go to Payments → Reports Repository → Transaction, and download a Custom Unified Transaction CSV. This file uses posting dates.
>
> **Etsy.** Download both the Orders CSV and the Order Items CSV (both are required). The Monthly Statement is optional and is used for actual card-processing fees.
>
> **TikTok Shop UK — Beta.** In Seller Centre go to Finance → Statements → Export or Export history, and download the XLSX file.
>
> You can also enter costs with the product CSV template or type them in. Buyer names, emails, addresses and similar personal details are removed at import and are never stored.
>
> Your plan decides how many of these platforms you can use at once (Starter 1 of 4, Growth up to 2, Pro and Scale all 4).

How to use this platform

Approved short steps:

> 1. Start your 14-day free trial and choose a plan.
> 2. Add your shop and pick the platform it uses.
> 3. Download the files above and upload them.
> 4. Add your product costs (and ads, shipping or overheads if you have them).
> 5. Review the import, then see your true profit, Health Score and the ranked fixes to make first.

A quieter secondary line may say: “Prefer to look around first? Open the sample report.”

The signed-in guided journey is unchanged.

Why

Akthar asked for both after testing. Sellers cannot judge the product if they do not know which exports to fetch or what happens after they start.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K44: accept the copy above. Design chooses expandable, tooltip-style disclosure or inline layout; the words and the tap-to-open rule are fixed.

---

5. Mobile phone and tablet/iPad — K45 (approved)

Current

v18 already requires responsive layouts from 320 px, 44 × 44 px touch targets, portrait and landscape, and real iPhone, Android, iPad and PC testing. The comparison table and sticky trial banner were not spelled out in enough detail. The review screenshot is an iPad.

Approved change

Strengthen the acceptance criteria:

- The marketing site and the app must be usable on a mobile phone and on a tablet/iPad, in portrait and in landscape, not merely a shrunk desktop page.
- **Comparison table.** On a phone, plans can appear as stacked cards, with the full comparison available as stacked rows or as a table that scrolls horizontally *inside the table only* (not the whole page), with the Capability column sticky and a visible cue that more columns exist. On iPad portrait, use that pattern if all four plan columns cannot be read without pinch-zooming body text. On iPad landscape, the full comparison must be readable without horizontal page-

scroll or pinch-zooming body text.

- **Sticky trial banner and site header** must not cover the page heading, table headers or primary content. The banner is dismissible; after it is dismissed the page reflows. On short tablet screens the banner text wraps fully rather than overflowing or sitting on top of the table.
- Touch targets, including banner and header buttons and the Shops/Seats help controls, are at least 44 × 44 px.
- Essential help (Shops, Seats, What files, How to use) is tap-to-open, never hover-only.
- Required device checks before launch: iPhone portrait, Android phone portrait, iPad portrait, iPad landscape, and desktop. The live pricing comparison reviewed on iPad on 6 November 2026 is a regression surface.

Why

Akthar said the product must be mobile-phone and tablet/iPad optimised. He found the comparison on an iPad, which is exactly where a wide table, a stacked sticky banner and hover-only help fail.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K45: accept the criteria above.

---

6. One primary call-to-action — K46 (approved)

Current

The live pricing page shows both **Start trial** (sticky banner) and **Start free trial** (header), plus secondary actions such as Compare plans, Sample report, Choose Growth and Open control room competing for attention.

Approved change

One primary label, used everywhere:

> Start 14-day free trial

Do not mix **Start trial**, **Start free trial** and **Start 14-day free trial**.

One visual primary per screen for signed-out visitors. Secondary actions use quieter buttons or text links.

Page	Primary	Secondary (quieter)
Home, signed out	Start 14-day free trial	Sample report; Compare plans; Sign

Page	Primary	Secondary (quieter)
		in
Pricing, signed out	Start 14-day free trial in the header. Recommended: the sticky banner states the trial terms and has **no second button**, so banner and header do not both shout. Plan cards use quieter **Choose Starter / Growth / Pro / Scale** actions that start that plan's trial. Compare plans is not a call-to-action when the comparison is already on the page.	Sign in
Sample report	Start 14-day free trial	Compare plans; Sign in
Sign in	Continue with Google / Continue with email (these are the page's job)	A quieter path into the 14-day trial for new customers
Checkout	The Stripe action that starts the trial, with the Option 1 disclosure visible first	—
Help, Terms, Privacy, Contact, Refunds	None required	A quiet text link is enough
Signed in, no trial or paid plan yet	Start 14-day free trial, or Choose a plan	—
Signed in, trial or paid	Product actions (for example dashboard or Upload). **Open control room** may be used here if that is the signed-in name of the workspace.	It must not appear on signed-out public pages as a competing marketing button

The header CTA on Pricing scrolls to the plan cards and focuses Growth (Most popular), so the customer still chooses a plan deliberately. Each card's Choose action then starts that plan's checkout.

Why

Akthar asked to lead with one primary CTA and make the others less prominent. Two different "start trial" buttons on the same iPad screen are the concrete problem.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K46: the rules and label above, banner-without-button on Pricing, header CTA scrolls to plans.

---

7. What “Shops” and “Seats” mean — K47 (approved)

Current

The comparison table lists Shops and Seats with no explanation. Akthar asked what they mean.

Approved change

Add a tap-friendly tooltip, footnote or expandable line on those rows (not hover-only), and use the same sentences anywhere the limits are first shown.

Shop. A shop is one online store connected to this account. If you sell from two Shopify stores, that is two shops. Starter, Growth and Pro include 1 shop. Scale includes up to 3.

Seat. A seat is a person who can sign in to this account. The owner always uses one seat. Extra seats are for people such as a bookkeeper or business partner. Starter and Growth include 1 seat (the owner). Pro includes 2. Scale includes 5.

Operational details of invitations, roles and Scale’s 15,000-order counting remain the existing recommended defaults (OD5, Q22–Q23), not new approvals.

Why

The words are industry shorthand. A first-time seller on an iPad has no reason to know them.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K47: accept the sentences above.

---

8. Layout and scaling on every screen — K48 (approved)

Current

The live homepage hero, reviewed on an iPad, looks zoomed out. The headline, supporting text and buttons are tiny. The copy sits in a narrow column with a large empty left margin. A green image panel is fixed to the right half, with the sample card floating in empty space. The hero is full viewport

height, but the content only fills the middle third. The same pattern can appear on desktop and on every other width if a wide canvas is simply shrunk to fit.

v18 and K45 already require responsive layouts, 44 × 44 px targets and real device checks. They do not set measurable type sizes, content-width rules for each breakpoint, hero-image pairing, or a screenshot matrix that includes laptop and large desktop widths.

Approved change

Add measurable acceptance criteria that apply to the public site and the signed-in app, on desktop and on every other platform. These are product requirements, not CSS instructions. Design chooses how to meet them.

Minimum rendered type (measured on the live page at the viewport under test, not in a design file):

Role	Phone 375–430	iPad portrait 768–834	iPad landscape 1024–1194	Laptop 1280–1440	Large 1920+
Body, supporting copy, button labels and form labels	at least 16 px	at least 16 px	at least 16 px	at least 16 px	at least 16 px
Section heading	at least 24 px	at least 28 px	at least 28 px	at least 28 px	at least 28 px
Page or hero headline	at least 28 px	at least 32 px	at least 36 px	at least 40 px	at least 40 px

Tap and click targets: at least 44 × 44 px at every width (same floor as K45).

Main content group means the headline, supporting text, primary actions and the associated visual if there is one (on Home, that includes the green panel and sample card).

Content-width and composition rules

- **Phone 375–430.** The main content group occupies at least 88% of the viewport width. The visual stacks with the copy, in the same column, and scales to that column. Left and right margins are roughly equal (they differ by no more than 8 px). The hero’s height fits the stacked content plus normal padding; it is not a full-viewport panel with the content only in the middle third.
- **iPad portrait 768–834.** The group occupies at least 86% of the viewport width. If the hero is two columns, those columns together meet the 86% rule, neither column is narrower than 34% of the viewport, and the image scales with the text column. Side margins are balanced (neither side more than twice the other). Hero height fits the content; content is not stranded in the middle third.

- **iPad landscape 1024–1194.** The group occupies at least 80% of the viewport width and is centred. The page must not look like a shrunken desktop: headline, body and buttons meet the type minima without pinch-zoom. The image scales with the text and stays visually paired with it. It is not a panel locked to the right half while the sample card floats in empty space. There is no vacant band on one side only that is wider than 12% of the viewport. Hero height fits the content; it is not full-viewport height with content only in the middle third.
- **Laptop 1280–1440.** The group occupies at least 75% of the viewport width (at least 960 px at 1280, at least 1,080 px at 1440) and is centred. Side margins outside the group are equal (they differ by no more than 24 px). The image scales with the text. Same hero-height rule as above.
- **Large 1920+.** The group is centred and at least as wide as it is at 1440 px (it does not shrink as the screen grows). It may grow up to 1,440 px wide. Left and right margins outside the group are equal. The page must not show a narrow text column with a large empty left margin and a separate visual locked to the right half. Type minima still apply, so text does not stay at a design-canvas size that looks tiny on a large monitor. Same image-scaling and hero-height rules.

Hero image. It scales with the accompanying content, as part of the same group. It is never a fixed panel independent of the text. On a phone it stacks. On tablet and desktop it stays paired with the text block.

No zoomed-out page. Each page renders at the device’s actual viewport width. A first-time visitor can read the headline and body and use the primary button without pinch-zooming. The layout is not a wide desktop composition scaled down to fit.

Mandatory pre-release screenshot check. Before release, capture every public page (Home, Pricing, Sample report, Sign in, Help, Terms, Privacy, Contact, Refunds, and any other public route) and the core signed-in screens (dashboard or control room, upload, Plan & billing, and the cancel confirmation) at these representative viewports:

- Phone: 390 × 844
- iPad portrait: 768 × 1024 and 834 × 1194
- iPad landscape: 1024 × 768 and 1194 × 834
- Laptop: 1280 × 800 and 1440 × 900
- Large: 1920 × 1080

Record a pass or fail against the type, target, width, empty-region, hero-scaling and zoomed-out rules. A fail blocks release. The iPad homepage hero reviewed on 6 November 2026 is a required regression surface, alongside the iPad pricing comparison from K45.

Why

Akthar reported the problem on the live iPad homepage and said it happens on desktop and every platform. Without numbered type sizes, width rules and screenshot evidence, “make it work on tablet” is too easy to miss.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K48: accept the measurements above.

---

9. Homepage Product section copy — K49 (approved)

Current

The live homepage section is headed **“Everything in the diagnosis — not a partial preview”**, a leftover from the old Free-versus-paid preview. Its six cards are:

- True profit & net margin — After product, packaging, shipping, ads, fees, returns and overheads — with Show the maths.
- Health Score 0–100 — Band + confidence on every shop. **Paid plans unlock the full score breakdown.**
- Six leaks, ranked by £ — Ads, returns, loss-makers, shipping subsidy, fee drag, thin pricing — monthly impact in your currency.
- Cost & product charts — Allocation donut and true profit by SKU. Losses marked in red — nothing decorative.
- Calculators — Break-even ROAS, ACOS and price, plus target-margin pricing across platforms.
- Scenarios & PDF — Model a price or cost change, save comparisons, export a PDF beside the results.

Problems: the headline describes the product, not the outcome; cards list features rather than one result each; jargon (ACOS, fee drag, allocation donut, Band + confidence) sits in the open; “Paid plans unlock the full score breakdown” is wrong now that every plan is paid and every plan includes the full Health Score; the Health Score card should not invent a new unlock; overheads, saved scenarios and the PDF are Growth and above, so those cards must not imply they ship on Starter; there is no single, clearly labelled sample proof number (the hero already shows £2,691, Health 69 and −£840 without one written proof line).

Approved copy

Headline

> See where your profit is leaking, in pounds

Supporting line

> Upload your platform reports. We’ll show your true profit, a Health Score and the six leaks that are costing you the most this month — then the first fix to make.

Sample proof number (one written line, clearly labelled as sample data, using the existing sample figures already on the page — do not invent a new marketing number):

> Sample result: on this example shop, the biggest leak is costing £840 a month.

A quieter supporting note may add: “True profit for the period shown is £2,691. Health Score 69. This is labelled sample data, not a live customer result.” The £840 figure is the single proof number.

Cards — one result line each. Jargon moves to a tap-friendly tooltip (not hover-only). Titles can stay short.

1. **True profit.** See what you actually keep after product, packaging, shipping, ads, fees and returns. - Tooltip: Every figure has Show the maths. Net margin is true profit divided by revenue. Overheads are included on Growth, Pro and Scale.
2. **Health Score.** Get a 0–100 score for each shop, with a plain-English reading of how healthy it is. - Tooltip: The score has a band (Strong, Needs attention or At risk) and a confidence label based on the data you uploaded. The full score and breakdown are included on every plan. - Do not say “Paid plans unlock the full score breakdown.” There is no Free plan, and the breakdown is not a higher-tier extra.
3. **Ranked leaks, in pounds.** See the six leaks that are costing you money this month, largest first. - Tooltip: The six leaks are unprofitable ads, high returns, loss-making products, shipping subsidy, fee drag (fees higher than the usual platform rate) and thin pricing.
4. **Where the money goes.** See how costs split across your products, with losses marked clearly. - Tooltip: A chart shows the share of costs and true profit by product. Some people call the cost-share chart an allocation chart.
5. **Price and ads calculators.** See the price you need to hit your target margin, and whether your ads are paying for themselves. - Tooltip: Break-even ROAS is how much revenue you need per £1 of ads. ACOS is ad spend as a share of revenue. Target-margin pricing works across the platforms you use.
6. **Try a change before you make it.** Model a price or cost change and download a PDF of the results — on Growth, Pro and Scale. - Tooltip: Growth includes two saved scenarios; Pro and Scale include unlimited saved scenarios. The PDF sits beside the results, not in the page header. Starter does not include saved scenarios or the PDF.

Why

Akthar asked for an outcome-led headline, one result per card, jargon moved aside, the false “paid plans unlock…” line fixed, and one labelled sample proof number. The recommended headline is his example. Removing the unlock line is the honest fix: stating a tier would still be wrong, because every paid plan includes the full score. Naming Growth, Pro and Scale on the scenarios/PDF card is required so we do not over-claim.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K49: accept the copy above, including the £840 sample proof line and the removal (not rewriting) of “Paid plans unlock the full score breakdown.”

---

10. Post-launch candidates — not part of v18.1

These are recorded so they are not lost. They are **not** proposed for v18.1 approval and must not be promised on the website, in emails or in the pricing table. Section 9 of the spec already keeps later features out of launch scope. The list below names the next candidates Akthar asked to park.

1. **Weekly profit email — recommended first after launch.** An opt-in email, for example each Monday, summarising the latest true profit, Health Score and the highest-£ leak, with a link back to the account. It uses data the product already has, needs no new platform connection, and repeats the main promise between visits. It must exclude buyer personal data, stop when access ends (K39), and be easy to turn off. Legal and privacy review would be required before any later approval.
2. **Ad platform connections.** Later: connect Meta, Google or TikTok ads so ad spend does not have to be typed or uploaded by hand. This overlaps the existing later items for store connectors and product-level ad tracking. It is higher effort (connections, permissions, privacy) than the weekly email.
3. **Alerts.** Later: notify the seller if Health Score drops, a leak grows, or something else needs attention. The 80% order-limit email already exists; this would broaden alerts. It overlaps the existing later item “email alerts.”
4. **Accountant-ready export.** Later: a period summary a bookkeeper can use (revenue, costs, fees, ads, returns, profit), beyond today’s cleaned-row CSV and the Growth+ diagnosis PDF. It would need accountant input so the product does not imply tax advice.

No K-decision is requested for these four items in v18.1.

---

11. Cancellation is in-platform only — K50 (approved)

Current

The v18.1 draft had three cancel routes: Plan & billing, the Stripe customer portal, and email as an extra route (“or by emailing [support email]”). Checkout, the easy-cancel list and some legal/help wording repeated that extra email path.

Approved change

Cancellation of a trial or a paid subscription happens **only in-platform**, by the **account holder (owner role, not other seats)**, from **Plan & billing**, using **Cancel trial** or **Cancel subscription**.

- Member seats cannot cancel and cannot change billing.
- There is **no cancel-by-email route** anywhere: not in Checkout, Plan & billing, Help, FAQ, Refunds & cancellation, Contact, support pages, or as an instruction in any email to write in or reply to cancel.

- Support pages and the FAQ must not offer email cancellation.
- Automated outbound system emails stay, because they are sent by the product and are legally needed: the trial reminder (with a link that opens Plan & billing) and the cancellation confirmation after the owner has cancelled in-platform. These do not create an inbox of cancellation requests for Akthar to process.

Why

Akthar, 6 November 2026 at about 00:30 Europe/Madrid: remove “email kept as a second way to cancel”. Cancellation must happen by the account holder from the platform. He does not want to deal with emails.

In-platform cancel still meets the UK 2027 rule that an online signup must have an online cancel route.

Approved decision

Approved (6 Nov 2026, 00:44 Europe/Madrid), K50: accept in-platform, owner-only cancellation from Plan & billing, and remove email cancellation everywhere.

---

12. Cancelling also closes the account — K51 (approved)

Current (superseded)

K29 (approved in v18): there is no Delete account button. Account closure is a verified email request, completed within 7 days. Subscription cancellation is different and may leave the login in place so the person can start fresh later. Download my data stays in-platform.

The conflict that this decision resolves

Akthar’s 6 November note — “I don’t want to deal with emails” — sat against that email closure route. If someone wrote in to close an account, someone had to read and action the email.

Approved decision (K51)

Approved (6 Nov 2026, 00:44 Europe/Madrid). Cancelling in-platform also closes the account. Access and Download my data continue until the original trial end or paid-period end; at that end the product data is wiped and the login is removed. There is no email-closure workflow. A GDPR / privacy contact address stays in the privacy policy only, because the law requires a way to contact the controller. That address is not a product “email us to cancel” or “email us to delete” inbox. Help, FAQ and Data & privacy must not invite people to email to cancel or to close an account.

This supersedes K29’s email-request closure. K29’s “no Delete account button” remains: the owner closes the account by using **Cancel trial** or **Cancel subscription** in Plan & billing, not a separate

Delete account control.

A later signup is a new account. Old data never returns.

Start fresh remains an in-app data clear while the subscription and account are still active; it does not cancel or close the account.

A legacy lifetime account has no subscription to cancel. There is no email-closure workflow for it either; Start fresh still clears product data, and any statutory erasure request goes through the privacy-policy contact only.

---

13. Reverse trial — K52 (approved)

Approved by Akthar Uddin, 6 November 2026 at 01:05 Europe/Madrid, in his words via card: “Approve the Pro trial for Starter, Growth and Pro with your default rules.”

Current (v18.1 before K52)

A 14-day trial used the selected tier’s features and unique-order limit. Day 15 charged that same plan. There was no separate trial entitlement, no “try Pro, pay Growth” disclosure, and no Keep Pro path.

Approved change

1. **Trial entitlement.** Starter, Growth or Pro trials get full Pro features and Pro’s 5,000 unique-order limit for the 14 days. Scale trials get Scale (unchanged). Store `trial_entitlement` (Pro or Scale) separately from `chosen_plan`.
2. **Charge the chosen plan.** Day 15 charges the chosen plan’s published price, not Pro, unless the chosen plan is Pro or the owner used Keep Pro. Checkout, visible before the card, must use this lead when the chosen plan is Starter or Growth: “You’ll try Pro free for 14 days. Unless you cancel, your [Growth] plan starts on [date] at £[amount] including VAT.” Then state card collection, that the customer pays nothing today, that the charge is not the Pro price, and that cancellation is in-platform from Plan & billing (K43, K50).
3. **In-app banner, label and Keep Pro.** While trialling: “You’re trying Pro free until [date]. Your [Growth] plan starts on [date] at £[amount]/mo. Keep Pro for £129/mo.” Keep Pro is secondary. It upgrades `chosen_plan` to Pro, keeps the same trial end date, creates no new trial and charges nothing today; day 15 then charges Pro. Show a Pro label in the header/account area and Plan & billing. For a chosen Pro plan the banner is only: “You’re on your Pro free trial until [date]”. Annual checkouts use the annual amounts (“Keep Pro for £1,290 a year”). A Scale trial banner is: “You’re on your Scale free trial until [date]”.
4. **Lock, don’t delete.** On conversion, features, history depth, seats, platforms, scenarios and other extras beyond the chosen plan become locked, not deleted. Locked items show a clear upgrade prompt. Upgrading restores them immediately. K39 does not run: wipe happens only when access ends, not on this entitlement drop. The 12.4 history rule still hides rows outside

the active window without deleting them.

5. **Order-limit overrun.** If trial uploads exceed the chosen plan's monthly limit, existing results stay visible and new unique-order uploads are blocked until an upgrade or the next billing month. Existing hard-limit rules apply. Conversion does not reset usage.
6. **Reminder.** The reminder email (recommended default remains 3 days before) lists the Pro features they will lose if the chosen plan is Starter or Growth, any order-limit overrun warning, the charge amount and date, a one-click Keep Pro upgrade, and the in-platform cancel link to Plan & billing.

Pricing and the comparison table may note "Every trial includes Pro features". That must not describe a Scale trial as only Pro. The public sticky banner stays the approved K43 line: "14 days free. Cancel before day 14 and pay nothing. From £39/mo".

Keep Pro is not a cancel-screen retention offer (K43). Cancel stays in-platform, owner-only (K50), and still closes the account (K51). Copy must stay clear and not misleading under UK subscription rules: trying Pro is not being charged for Pro.

Acceptance tests L17, S17, S18, S20, S23, S26, S30, S36–S46 and D13 cover these rules.

Approved decision

Approved (6 Nov 2026, 01:05 Europe/Madrid), K52: accept the reverse-trial rules above.

Approved decision summary

ID	Decision	Approved on 6 Nov 2026
K41	Remove Support target and published support SLAs everywhere. Keep generic email support on every plan.	00:44 Europe/Madrid
K42	Remove the founding 25% / first-100 offer everywhere. Q26 withdrawn.	00:44 Europe/Madrid
K43	Trial wording and easy-cancel flow. Banner: "14 days free. Cancel before day 14 and pay nothing. From £39/mo" (first approved 00:34). Other Option 1 strings approved, with no email cancel. Options 2 and 3 are history. No retention offer at launch. Access continues until the original trial or paid-period end, then data is wiped.	Banner 00:34; remainder 00:44 Europe/Madrid
K44	Homepage "What files do I need?" and "How to use this platform". Accept the copy in section 4.	00:44 Europe/Madrid

ID	Decision	Approved on 6 Nov 2026
K45	Stronger phone and tablet/iPad acceptance. Accept the criteria in section 5.	00:44 Europe/Madrid
K46	One primary CTA, unified label “Start 14-day free trial”; banner on Pricing has terms only; header scrolls to plans.	00:44 Europe/Madrid
K47	Shops and Seats explanations. Accept the sentences in section 7.	00:44 Europe/Madrid
K48	Layout and scaling on every screen. Accept the type minima, content-width rules, hero-image pairing, no-zoomed-out rule and screenshot matrix in section 8.	00:44 Europe/Madrid
K49	Homepage Product section copy. Accept the outcome headline, one-result cards, jargon tooltips, removal of “Paid plans unlock…”, and the labelled £840 sample proof.	00:44 Europe/Madrid
K50	In-platform cancellation only. Owner cancels from Plan & billing. No cancel by email. Support and FAQ must not offer email cancellation. Outbound reminder and confirmation emails stay.	00:44 Europe/Madrid
K51	Cancelling in-platform also closes the account. Data is wiped at access end and the login is removed. No email-closure workflow. A GDPR contact address stays in the privacy policy only. This supersedes K29’s email closure.	00:44 Europe/Madrid
K52	Reverse trial: Starter, Growth and Pro trials receive full Pro features and Pro’s 5,000-order limit; Scale trials receive Scale; day 15 charges the chosen plan; in-app Pro banner, label and Keep Pro; conversion locks extras rather than deleting them; overrun keeps results visible; reminder lists lock, overrun, Keep Pro and in-platform cancel. Public K43 banner unchanged.	01:05 Europe/Madrid

What does not change

- All Health Score, leak, target-price and related formulas in sections 12.0–12.3.
- Published prices: Starter £39, Growth £79, Pro £129, Scale £199 a month including VAT, and the matching annual prices.
- Hard unique-order limits: 500 / 2,000 / 5,000 / 15,000.
- K38 commercial trial terms and K39 deletion-at-access-end, except that K51 closes the account (and removes the login) when the owner cancels, and K52 sets trial entitlement to Pro

(or Scale) while day 15 still charges the chosen plan. Other labelled defaults that were not in this approval list (one trial per card, 3-day reminder timing, OD7 and the other open table entries) stay as defaults behind config, per K40.
- K29's "no Delete account button" remains. K29's email-request closure is superseded by K51.
- Platform set: Shopify, Amazon, Etsy, TikTok Shop UK — Beta.
- Working-name / MarginSeam clearance (OD3), Stripe, Google, SES Stockholm, and the other open defaults already listed in v18.
- Post-launch candidates in section 10 (weekly profit email, ad platform connections, alerts, accountant-ready export) are recorded only. They are not v18.1 scope and are not proposed for approval now.

Files

- `/workspace/MarginOS-v18.1-Changes.md` and `.pdf` (this note, including K52)
- `/workspace/MarginOS-Spec-v18.1.md` and `.pdf`
- `/workspace/MarginOS-Features-v18.1.md` and `.pdf` (Marketing companion)

A pre-K52 backup of the 00:44 v18.1 FINAL files is at `/workspace/audit/v18.1/pre-K52/`.
